*Valuation.*—In general, the Customs Act provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold “(a) to purchasers located at that place with whom the vendor deals at arm’s length and who are at the same or substantially the same trade level as the importer, and (b) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions”. In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty ordinarily may not be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping goods to Canada and similar charges do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

*Anti-dumping Act.*—Canada’s Anti-dumping Act (RSC 1970, c. A-15) provides, in brief, that where goods are dumped, i.e., the export price is less than the normal value, and such dumping has caused, is causing, or is likely to cause material injury to the production of like goods in Canada, or has materially retarded or is materially retarding the establishment of the production in Canada of like goods as determined by the Anti-dumping Tribunal, there shall be levied, collected and paid an anti-dumping duty. This anti-dumping duty is in an amount equal to the margin of dumping of the entered goods.

*Drawback.*—There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as “home consumption” drawbacks, is provided for under the Customs Act and the Customs Tariff and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

**The Tariff Board.**—The organization and functions of the Tariff Board are described at p. 151 of this volume.

### **Subsection 2.—Tariff and Trade Arrangements with Other Countries as at Oct. 1, 1971**

Canada’s tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements providing for exchange of preferential rates are: Australia, the Bahamas, Barbados, Bermuda, Guyana, British Honduras, Jamaica, the Leeward and the Windward Islands, Trinidad and Tobago, New Zealand, Britain and its dependent territories, and Malawi. Canada also exchanges preferences with Ceylon (now Republic of Sri Lanka), Cyprus, Fiji, Gambia, Malaysia, Malta, Mauritius, Singapore, Swaziland and Western Samoa and accords preferences to India, Pakistan, Ghana, Nigeria, Botswana, Lesotho, Kenya, Tanzania, Uganda, Zambia and Sierra Leone. Many of these countries are also members of the GATT. In addition, Canada has trade agreements with Ireland and South Africa under which preferences are exchanged.

Canada signed the Protocol of Provisional Application of the General Agreement on Tariffs and Trade on Oct. 30, 1947, and brought the General Agreement into force on Jan. 1, 1948. The Agreement provides for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties, and lays down rules and regulations to govern the conduct of international trade.

As of Oct. 1, 1971, there were 79 full members and one provisional member, Tunisia, in the GATT. These countries and the effective dates of their accession are indicated in the following list. The GATT is applied on a *de facto* basis to a number of newly independent states—Algeria, Botswana, Lesotho, Maldives, Cambodia (now Khmer Republic), Mali, Singapore, Swaziland and Zambia—pending decisions as to their future commercial policies.

Trade relations between Canada and a number of other countries are governed by trade agreements of various kinds, by exchange of most-favoured-nation treatment under Orders in Council, by continuation to newly independent states of the same treatment originally negotiated with the countries previously responsible for their commercial relations, and by even less formal arrangements.

### Tariff and Trade Arrangements with Commonwealth Countries as at Oct. 1, 1971

Country	Agreement	Tariff Treatment
AUSTRALIA.....	Trade Agreement in force June 30, 1960. GATT effective Jan. 1, 1948.	Bindings of rates of duty and margins of preference on specified products and exchange of preferential tariff rates on most other products.
BARBADOS.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Nov. 30, 1966.	Exchange of preferential tariff treatment.
BOTSWANA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT <i>de facto</i> application.	Canada accords British preferential tariff treatment.
BRITAIN.....	Trade Agreement effective Sept. 1, 1937; modified by exchanges of letters Nov. 16, 1938 and Oct. 30, 1947. GATT effective Jan. 1, 1948.	Various concessions are granted by each country including exchange of preferential tariff treatment. The Agreement (as modified) includes provisions relating to the Colonies, Dependencies and Trustships.
CEYLON (NOW REPUBLIC OF SRI LANKA).	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective July 29, 1948.	Exchange of British preferential tariff treatment.
COMMONWEALTH CARIBBEAN (BAHAMAS, BERMUDA, BRITISH HONDURAS, LEEWARD ISLANDS, WINDWARD ISLANDS).	Canada-British West Indies Trade Agreement, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. Protocol signed July 8, 1966, provides <i>inter alia</i> for continuation of 1925 Agreement. Bermuda, British Honduras, the Leeward Islands and the Windward Islands participate in GATT	Exchange of preferential tariff treatment.
CYPRUS.....	GATT effective Aug. 16, 1960.	Exchange of British preferential tariff treatment.
FIJI.....	Relations continue to be governed by Canada-United Kingdom Trade Agreement of 1937.	Exchange of British preferential tariff treatment.
GAMBIA.....	GATT effective Feb. 18, 1965.	Exchange of British preferential tariff treatment.
GHANA.....	GATT effective Oct. 18, 1957.	Canada accords British preferential tariff treatment to Ghana (except on cocoa beans). Ghana extends most-favoured-nation treatment to Canada.
GUYANA.....	Relations are based on the Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective July 5, 1966.	Exchange of preferential tariff treatment.

## Tariff and Trade Arrangements with Commonwealth Countries as at Oct. 1, 1971—continued

Country	Agreement	Tariff Treatment
INDIA.....	Since 1897 Canada has unilaterally accorded British preferential treatment without contractual obligation. GATT effective July 8, 1948.	Canada accords British preferential tariff treatment to India. India extends most-favoured-nation treatment to Canada.
JAMAICA.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Aug. 6, 1962.	Exchange of preferential tariff treatment.
KENYA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Dec. 12, 1963.	Canada accords British preferential tariff treatment to Kenya. Kenya extends most-favoured-nation treatment to Canada.
LESOTHO.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT <i>de facto</i> application.	Canada accords British preferential tariff treatment to Lesotho.
MALAWI.....	Malawi and Canada observe the terms of the 1953 Trade Agreement between Canada and the former Federation of Rhodesia and Nyasaland. GATT effective July 6, 1964.	Exchange of preferential tariff treatment.
MALAYSIA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Sept. 16, 1963.	Exchange of British preferential tariff treatment.
MALDIVES.....	GATT <i>de facto</i> application.	Canada accords British preferential tariff treatment to the Maldives Islands.
MALTA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Sept. 16, 1964.	Exchange of British preferential tariff treatment.
MAURITIUS.....	GATT effective Mar. 12, 1968.	Exchange of British preferential tariff treatment.
NEW ZEALAND.....	Trade Agreement in force May 24, 1932. GATT effective July 26, 1948.	Bindings of rates of duty on specified products and the exchange of preferential tariff rates on all other products.
NIGERIA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Oct. 1, 1960.	Canada accords British preferential tariff treatment to Nigeria. Nigeria extends most-favoured-nation treatment to Canada.
PAKISTAN.....	Canada unilaterally accords British preferential treatment without contractual obligation. GATT effective July 30, 1948.	Canada accords British preferential tariff treatment to Pakistan. Pakistan accords most-favoured-nation tariff treatment to Canada.
RHODESIA.....	Canada does not recognize the present Government of Rhodesia.	Trade embargo exists between Canada and Rhodesia with certain humanitarian exceptions.
SIERRA LEONE.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Apr. 27, 1961.	Canada accords British preferential tariff treatment to Sierra Leone. Sierra Leone extends most-favoured-nation tariff treatment to Canada.
SINGAPORE.....	GATT <i>de facto</i> application.	Exchange of British preferential tariff treatment.
SWAZILAND.....	GATT <i>de facto</i> application.	Exchange of British preferential tariff treatment.
TANZANIA.....	GATT effective for Tanganyika Dec. 9, 1961 and extended to Zanzibar upon formation of United Republic, Apr. 23, 1964.	Canada accords British preferential tariff treatment to Tanzania. Tanzania extends most-favoured-nation treatment to Canada.

**Tariff and Trade Arrangements with Commonwealth Countries as at Oct. 1, 1971—concluded**

Country	Agreement	Tariff Treatment
TRINIDAD AND TOBAGO.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Aug. 31, 1962.	Exchange of preferential tariff treatment.
UGANDA.....	GATT effective Oct. 9, 1962.	Canada accords British preferential tariff treatment to Uganda. Uganda extends most-favoured-nation tariff treatment to Canada.
WESTERN SAMOA.....	Relations continue to be governed by Trade Agreement of 1932 with New Zealand.	Exchange of specified preferences on scheduled goods and exchange of British preferential tariff rates on items not scheduled.
ZAMBIA.....	GATT <i>de facto</i> application.	Canada accords British preferential tariff treatment to Zambia. Zambia extends most-favoured-nation treatment to Canada.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at Oct. 1, 1971**

Country	Agreement	Tariff Treatment
ALGERIA.....	Franco-Canadian Trade Agreement of 1933 applied to Algeria. Algeria maintains a <i>de facto</i> application of GATT.	Since the creation of Algeria as an independent state in 1962, Canada has continued to grant most-favoured-nation treatment.
ARGENTINA.....	Trade Agreement in force Nov. 15, 1941. GATT effective Oct. 11, 1967.	Exchange of most-favoured-nation treatment.
AUSTRIA.....	GATT effective Oct. 19, 1951.	Exchange of most-favoured-nation treatment.
BAHRAIN.....	GATT effective Aug. 15, 1971.	Exchange of most-favoured-nation treatment.
BELGIUM-LUXEMBOURG.....	Convention of Commerce with Belgium-Luxembourg Economic Union (including Belgian colonies) entered into effect Oct. 22, 1924. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment.
BENELUX (BELGIUM-NETHERLANDS-LUXEMBOURG CUSTOMS UNION).	(See Belgium-Luxembourg and Netherlands.)	
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of U.K.-Bolivia Treaty of Commerce.	Exchange of most-favoured-nation treatment.
BRAZIL.....	Trade Agreement in force Apr. 16, 1943. GATT effective July 31, 1948.	Exchange of most-favoured-nation treatment.
BULGARIA.....	Trade Agreement signed Oct. 8, 1963 renewed for further three years from Oct. 8, 1966 and extended on a <i>de facto</i> basis.	Exchange of most-favoured-nation treatment and undertaking by Bulgaria to purchase a minimum of 200,000 metric tons of wheat or equivalent in flour during the three-year validity of the Agreement.
BURMA.....	GATT effective July 29, 1948.	Exchange of most-favoured-nation treatment.

**Tariff and Trade Arrangements with Non-Commonwealth Countries  
as at Oct. 1, 1971—continued**

Country	Agreement	Tariff Treatment
BURUNDI.....	GATT effective Nov. 25, 1965.	Exchange of most-favoured-nation treatment.
CAMBODIA (NOW KHMER REPUBLIC).	Franco-Canadian Trade Agreement of 1933 applied to Cambodia. Became a <i>de facto</i> member of GATT in 1968.	Since the creation of Cambodia as an independent state in 1955, Canada has continued to grant most-favoured-nation treatment.
CAMEROON.....	Franco-Canadian Trade Agreement of 1933 applied to Cameroon. GATT effective Nov. 28, 1960.	Exchange of most-favoured-nation treatment.
CENTRAL AFRICAN REPUBLIC....	Franco-Canadian Trade Agreement of 1933 applied to Central African Republic. GATT effective Aug. 14, 1960.	Exchange of most-favoured-nation treatment.
CHAD. ....	Franco-Canadian Trade Agreement of 1933 applied to Chad. GATT effective Aug. 11, 1960.	Exchange of most-favoured-nation treatment.
CHILE.....	Trade Agreement in force Oct. 29, 1943. GATT effective Mar. 16, 1948.	Exchange of most-favoured-nation treatment.
CHINA.....	<i>Modus vivendi</i> in force Sept. 28, 1946.	Exchange of most-favoured-nation treatment.
COLOMBIA.....	Treaty of Commerce with Britain of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938.	Exchange of most-favoured-nation treatment.
CONGO (BRAZZAVILLE).....	Franco-Canadian Trade Agreement of 1933 applies to Congo (Brazzaville). GATT effective Aug. 15, 1960.	Exchange of most-favoured-nation treatment.
CONGO (KINSHASA).....	Belgo-Canadian Convention of Commerce of 1924 applied to Congo (Kinshasa). GATT effective Sept. 11, 1971.	Exchange of most-favoured-nation treatment.
COSTA RICA.....	<i>Modus vivendi</i> in force Jan. 26, 1951.	Exchange of most-favoured-nation treatment.
CUBA.....	GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment.
CZECHOSLOVAKIA.....	Convention of Commerce in force Nov. 14, 1928. GATT effective May 21, 1948.	Exchange of most-favoured-nation treatment.

By exchange of notes Liechtenstein included under terms of this Agreement, effective July 14, 1947. GATT effective Aug. 1, 1966.	Exchange of most-favoured-nation treatment.
SYRIAN ARAB REPUBLIC.....	Special Arrangement by Order in Council of Nov. 19, 1946.	Canada grants most-favoured-nation treatment tariff rates as long as Syria accords reciprocal treatment.
THAILAND.....	<i>Modus vivendi</i> effective Apr. 22, 1969.	Exchange of most-favoured-nation treatment.
TOGO.....	Franco-Canadian Trade Agreement of 1933 applied to Togo. GATT effective Mar. 20, 1964.	Exchange of most-favoured-nation treatment.
TUNISIA.....	Tunisia acceded to GATT provisionally in 1959.	Since the creation of Tunisia as an independent state in 1956, Canada has continued to grant most-favoured-nation treatment.
TURKEY.....	Exchange of notes in effect Mar. 15, 1948. GATT effective Oct. 17, 1951.	Exchange of most-favoured-nation treatment.
UNION OF SOVIET SOCIALIST REPUBLICS.	Trade Agreement of 1956 extended to Apr. 18, 1972.	Exchange of most-favoured-nation treatment.

**Tariff and Trade Arrangements with Non-Commonwealth Countries  
as at Oct. 1, 1971—concluded**

Country	Agreement	Tariff Treatment
UNITED ARAB REPUBLIC.....	Exchange of notes in force Dec. 3, 1952. GATT effective May 9, 1970.	Exchange of most-favoured-nation treatment.
UNITED STATES.....	Trade Agreement of Nov. 17, 1938 suspended as long as both countries continue to be contracting parties to GATT. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment.
UPPER VOLTA.....	Franco-Canadian Trade Agreement of 1933 applied to Upper Volta. GATT effective Aug. 5, 1960.	Exchange of most-favoured-nation treatment.
URUGUAY.....	Trade Agreement in force May 15, 1940. Additional protocol signed Oct. 19, 1953. GATT effective Dec. 16, 1953.	Exchange of most-favoured-nation treatment.
VENEZUELA.....	<i>Modus vivendi</i> in force Oct. 11, 1950.	Exchange of most-favoured-nation treatment. Made for one year subject to annual renewal.
VIET-NAM.....	Franco-Canadian Trade Agreement of 1933 applied to Viet-Nam.	Since 1955, Canada has continued to accord most-favoured-nation rates.
YUGOSLAVIA.....	Trade Agreements Act of June 11, 1928, accepted Article 30 of U.K.-Serb-Croat-Slovene Treaty of Commerce and Navigation in force Aug. 9, 1928. GATT effective Aug. 25, 1966.	Exchange of most-favoured-nation treatment.

#### PART IV.—TRAVEL BETWEEN CANADA AND OTHER COUNTRIES\*

The dimensions of international travel between Canada and other countries continue to expand. In 1970, international travel involved 74,444,000 border crossings and an estimated expenditure of \$2,695,000,000. As would be expected, most of this travel traffic was between Canada and the United States. In that year, 37,153,000 United States visitors entered Canada, 3.9 p.c. more than in 1969, and Canadian travellers to the United States numbered 35,656,000, also slightly more than in the preceding year. The remainder of the border crossings consisted of travel between Canada and overseas countries, which involved 535,532 visitors to Canada (direct and by way of the United States) and 1,099,429 Canadian travellers returning to Canada (direct and by way of the United States); the increase over 1969 in visitors to Canada from overseas was 15.6 p.c. and in Canadians returning from visits overseas 29.1 p.c. Although the increase of travel between Canada and the United States is large in absolute terms, travel between Canada and overseas countries has been expanding at a proportionately greater rate.

The effect of changes in the number of border crossings and expenditure patterns is of considerable importance to persons in the travel industry, as well as to those concerned with Canada's balance of payments. In 1970, expenditures of all visitors to Canada were estimated at \$1,233,900,000, an amount 14.9 p.c. higher than in 1969. Expenditures by Canadian travellers outside of Canada went up 13.0 p.c. to reach an estimated \$1,459,900,000. These changes in expenditures resulted in a travel account deficit of \$226,000,000 in 1970

\*Prepared by the International Travel Statistics Section, Economic Accounts Branch, Statistics Canada.

A rustic bridge over a swamp on the Rideau Hiking Trail which cuts through the woodlands and forests and crosses the hills and farmlands of the hundred odd miles between Ottawa and Kingston. This is one of the many trails being developed all across the country for the enjoyment of both the long-distance and the afternoon hiker.

Don Woodcock

Camping has become the most popular form of family recreation in Canada, overtaxing the abundant camping places provided in the national and provincial parks.

Fishing still gives perhaps the greatest pleasure to the summer vacationist. This one has taken a 30-pound lake trout from Saganaga Lake in the Thunder Bay Forest District.

Ontario Department of Lands and Forests

compared with one of \$218,000,000 in 1969, which increase was entirely accounted for by the negative balance with overseas countries; there was a \$146,000,000 surplus in Canada's travel account with the United States.

The assurance in Canadian spending abroad has been augmented by the continuing increase in availability of economical charter flights and special excursions which have enabled students, young people and lower income groups to travel in much greater numbers. Also contributing to some extent in this increase was the unpegging of the Canadian dollar on May 31, 1970, which resulted in greater purchasing power for the Canadian traveller abroad, and the easing of currency restrictions on travel by the United Kingdom, France and Japan, which permitted greater per capita spending.

**Travel Between Canada and the United States.**—During 1970, some 37,153,000 United States residents visiting Canada spent an estimated \$1,081,900,000. Of these, 23,505,100 were short-term visitors (persons entering and leaving on the same day) who spent \$129,300,000. This short-term traffic accounted for 63 p.c. of the total entries from the United States but for only about 12 p.c. of the total expenditure. Travellers remaining one or more nights, on the other hand, accounted for only 37 p.c. of the total entries but for 88 p.c. of the expenditure. Thus, there appears to be a strong correlation between the longer-term traffic and total expenditure.

The most common means of transportation used to enter Canada from the United States is the automobile. In 1970, 20,804,000 short-term and 11,214,000 long-term travellers came by car, together accounting for 86 p.c. of the total entries from that country. These automobile travellers spent an estimated \$732,300,000 which was 68 p.c. of the total spent by United States visitors and, of that amount, \$627,800,000 or 86 p.c. was spent by long-term visitors. Arrivals by other means of transport were: air, 1,286,000, a 13.5-p.c. increase over 1969; bus, 1,065,000, a 22.9-p.c. increase; boat, 598,000, a 13.3-p.c. increase; and rail, 140,000. The latter number was down by 29.3 p.c. from the previous year as a result of the closure of rail service through various points of entry across the country. United States visitors by air spent an estimated \$184,200,000, by bus \$107,700,000, by boat \$16,500,000, and by rail \$22,500,000.

Expenditures of Canadian travellers in the United States amounted to \$935,900,000 in 1970, a 4.9-p.c. increase over such expenditures in 1969. The number of Canadian residents returning from the United States rose to 35,656,000 from 35,441,700 in 1969, the increase being in long-term traffic which was 4.4 p.c. higher than in the preceding year; short-term traffic, on the other hand, showed a slight decrease. Long-term travellers comprised only 27.3 p.c. of the total re-entries from the United States but for 93.8 p.c. of the total spending.

The results of a voluntary questionnaire used to obtain information on travel habits of Canadians travelling to the United States indicated that in 1970, of those replying, 35.3 p.c. were residents of Ontario whose expenditures made up 43.7 p.c. of the total payments to the United States; Quebec accounted for 35.0 p.c. of the travellers and 28.3 p.c. of the payments. Of all those replying, 55.9 p.c. stated that holiday or recreation was the prime reason for visiting the United States, 26.9 p.c. visited friends or relatives and 9.2 p.c. went for business reasons. Quebec recorded the highest percentage of holiday trips (40.9) and Ontario recorded the highest percentages of visits to friends or relatives (37.2) and of business trips (43.5).

**Travel Between Canada and Overseas Countries.**—In 1970, overseas visitors entering Canada (direct and by way of the United States) numbered 535,532, a 15.6-p.c. increase over the preceding year. Their expenditures, including transportation costs, amounted to \$152,000,000—while in Canada they spent about \$103,000,000—the increase

of 29.7 p.c. over 1969 resulting partly from the relaxation of currency restrictions mentioned above. In the United Kingdom, for example, relaxed restrictions now allow each member of a family travelling abroad to spend up to \$780 a year; previously the amount allowed was \$130. In 1970, 157,700 overseas visitors came from the United Kingdom, constituting 29.5 p.c. of the total; they spent \$44,000,000 in Canada compared with \$29,000,000 in 1969. Visitors from other sterling areas numbered 74,500 and recorded expenditures of \$23,000,000; those from other OECD countries in Europe numbered 68,000 with expenditures of \$53,000,000.

Of the overseas visitors who replied to the questionnaire survey, 42.6 p.c. stated Ontario as their province of destination and 28.3 p.c. stated Quebec. Further stratification showed that 52.9 p.c. of the United Kingdom residents visiting Canada, 49.6 p.c. of the visitors from other sterling areas, and 37.2 p.c. of those from OECD countries in Europe stated Ontario as their destination. Visitors from the United Kingdom remained in Canada an average of 25.1 nights compared with 22.6 nights in 1969; visitors from other sterling areas remained an average of 13.9 nights compared with 16.0 nights in 1969; and those from other OECD countries in Europe remained 21.1 nights compared with 18.8 in the preceding year.

Canadian residents returning in 1970 from visits overseas numbered 1,099,429—957,429 returning direct and 142,000 by way of the United States—representing a 29.1-p.c. increase over 1969. Total Canadian expenditure overseas was estimated at \$524,000,000, including payments made to overseas carriers for transportation; \$156,000,000 was spent in the United Kingdom, \$66,000,000 in other sterling areas, \$207,000,000 in other OECD countries in Europe, and \$95,000,000 in all other countries.

Questionnaire response of Canadians returning direct from overseas visits showed that, of the total replying, 22.5 p.c. visited the United Kingdom only; 12.2 p.c. visited the United Kingdom and other OECD areas in Europe; and 20.9 p.c. visited other OECD countries in Europe only. The average length of stay while visiting the United Kingdom only was 26.2 nights compared with 25.2 in 1969; visitors to the United Kingdom and other OECD countries in Europe remained 32.7 nights, the same as in 1969; and visitors to other OECD countries in Europe only stayed 29.1 nights, a slightly shorter time than in 1969.

Canadian residents returning from overseas indicated that holiday or recreation were the main reasons for visiting (57.4 p.c.), followed by visiting friends or relatives (29.7 p.c.); 52.9 p.c. of them gave Ontario as their province of residence and 21.4 p.c. were Quebec residents.

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.*

Consolidated statistics of revenue and expenditure for all governments in Canada—federal, provincial and municipal—are presented in Section 1 of this Chapter and Section 2 covers the incidence of taxation at the three levels. More detailed information for each level of government is given in Sections 3, 5 and 6. Section 4 gives information on joint federal-provincial programs and on the extent of federal financial participation in such programs.

### Section 1.—Consolidated Government Finance Statistics

Tables 1 and 2 provide details of the federal and provincial-local government components of consolidated government revenue by source, and consolidated government expenditure by function. The object of these consolidations is to reflect the relationship between government and the public in respect of revenue raised and services provided. The consolidated net general figures were arrived at by eliminating from the gross revenue and the corresponding functionalized expenditure of each level of government, the following: conditional grants (grants-in-aid and shared-cost contributions); institutional revenue; and interest, premium, discount and exchange revenue. In addition, transfers of unconditional grants, such as subsidy payments of the Federal Government to provincial governments, have also been eliminated from the gross revenue of the receiving government and from the gross expenditure of the paying government. Because of the differing accounting practices of governments and the variations in fiscal year-ends, some discrepancies appear between amounts recorded as intergovernment transfers received and those recorded as paid.

\* Except as otherwise indicated, revised in the Governments Division, Statistics Canada.

## Section 2.—Taxation in Canada\*

Taxes are imposed in Canada by the Federal Government, by the provincial governments and by municipalities. The Government of Canada has the right to raise money "by any mode or system of taxation" while the provincial legislatures are restricted to "direct taxation within the province in order to the raising of a revenue for provincial purposes". Thus, the provinces have a right to use only the field of direct taxation and the Federal Government is not subject to any constitutional restriction in matters of taxation. Municipalities derive their incorporation with its associated powers, fiscal and otherwise, from the provincial government concerned. Thus, municipalities are also limited to direct taxation.

A direct tax is generally recognized as one "which is demanded from the very person who it is intended or desired should pay it". This concept has limited the provincial governments to the imposition of income tax, retail sales tax, succession duties and an assortment of other direct levies. In turn, municipalities, acting under provincial legislation, tax real estate, water consumption and places of business. The Federal Government levies taxes on income, excise taxes, excise and customs duties, and a sales tax.

\* Revised (March 1972) in the Tax Policy Branch, Department of Finance, under the direction of F. R. Irwin, Director of the Personal, Commodity and Estate Tax Division, and by the provincial authorities concerned.

Starting in 1941, a series of federal-provincial tax agreements were concluded to promote the orderly imposition of direct taxes. The duration of each agreement was normally five years. Under the earlier agreements, the participating provinces undertook in return for compensation not to use, or permit their municipalities to use, certain of the direct taxes. Under more recent arrangements, the federal personal and corporation income tax otherwise payable in all provinces and the estate tax otherwise payable in three provinces are abated by certain percentages to make room for provincial levies.

Federal tax reform amendments passed in 1971, which became effective for the most part from the beginning of 1972, included a new personal income tax rate structure which was not designed to be abated in the previous way. At the same time the federal estate tax was terminated. As a result, the arrangement under which federal taxes are abated has general application now only for the corporation income tax. All provinces impose taxes on the income of individuals and corporations and all but Alberta impose taxes on property passing at death. As part of the current fiscal arrangements, the Federal Government has entered into tax collection agreements under which it collects provincial personal income taxes for all provinces except Quebec, provincial corporation income taxes for all provinces except Ontario and Quebec, and provincial succession duties for all provinces except Quebec, Ontario and British Columbia.

### Subsection 1.—Federal Taxes

#### Individual Income Tax

Personal income taxation in Canada is imposed on the basis of residence. Every individual who is resident in Canada at any time during a year is liable for the payment of income tax on all his income. A non-resident individual is liable for tax only on income from sources in Canada. The term "residence" is difficult to define simply but, generally speaking, it is taken to be the place where a person resides or where he maintains a dwelling ready at all times for his use. There are also statutory extensions of the meaning of "resident" to include a person who has sojourned in Canada for an aggregate period of 183 days in a taxation year, or a person who was during the year a member of the armed forces of Canada, or an officer or servant of Canada or of any one of its provinces, or the spouse or dependent child of any such person. The extended meaning of resident also includes employees who go from Canada to work under certain international development assistance programs.

The Canadian tax law uses the concepts "income" and "taxable income". The income of a resident of Canada for a taxation year comprises his revenues from all sources inside or outside Canada and includes income for the year from businesses, property, offices and employments. Starting in 1972, it also includes one half of taxable capital gains.

In computing his income, an individual must include benefits from employment, fees, commissions, dividends, annuities, pension benefits, interest, alimony and maintenance payments. Also included are unemployment insurance benefits, scholarships in excess of \$500, benefits under a disability insurance plan to which his employer contributes and other miscellaneous items of income. On the other hand, war service disability pensions paid by Canada or a country that was an ally of Her Majesty at the time of the war service, social assistance payments made on a needs-test basis under a prescribed program, compensation in respect of an injury or death paid under a Workmen's Compensation Act of a province and family income security payments do not have to be included in the computation of income.

An employee does not have to include in his income allowances paid to him by his employer to cover travelling expenses to a distant work site, or board and lodging while at the site. In order to qualify, the worker must travel away from his ordinary residence in which he supports his wife or other dependant, the work site must be temporary and the time away from his ordinary residence must be at least 36 hours.

Certain amounts are deductible in computing income. These include contributions to a registered employees' pension plan, premiums to a registered retirement savings plan, premiums under the unemployment insurance program, alimony payments and union dues. An employee may deduct 3 p.c. of his salary or wages (up to a maximum of \$150 per year) to cover expenses of earning his income. No receipts or details of actual expenditures are necessary to claim this deduction. Expenses of meals and lodging while away from home are deductible by employees who have to travel as they perform their work, such as employees who work on trains or who drive trucks. Where a mother has her children cared for in order that she may work, she may deduct this expense subject to certain limitations. A father may deduct child care expenses where he is the only parent of the family or where the mother is incapable of caring for the children. Expenses of moving to a new work location are deductible from income earned in the new location. These moving expenses may be deducted by salary or wage earners, self-employed persons and, in some instances, by students at post-secondary educational institutions. Students attending universities, colleges, high schools or certain other certified educational institutions in Canada may deduct their tuition fees if they exceed \$25 per annum. Students in full-time attendance at universities outside Canada are also allowed to deduct their tuition fees.

An individual who is carrying on a business may deduct his business expenses in computing his income. These include wages, rents, depreciation (called capital cost allowances), municipal taxes, interest on borrowed money, reserves for doubtful debts, contributions to pension plans or profit-sharing plans for his employees, and bad debts.

All individuals now have to bring half of their capital gains into income. They may deduct half of their capital losses against these gains. In the event that half of an individual's losses exceed the amount included in income in respect of capital gains, \$1,000 of these losses may be deducted from other income. Losses not deducted in the year incurred may be carried back one year or forward to future years to be deducted. Capital gains or losses are those realized on the disposition of property. Other gains or losses such as from a lottery or gambling are not included. The sale of personal property at a price not exceeding \$1,000, and the sale of a taxpayer's home, do not create a capital gain or loss. A sale or disposition of property is deemed to have taken place when the taxpayer dies or makes a gift of property unless the property is left or given to his spouse. The amount of a capital gain or loss on disposition of property is determined by reference to its adjusted cost basis. Capital gains on property owned at the beginning of the system are computed by reference to the higher of cost or valuation-day value and capital losses by reference to the lower of cost or valuation-day value. When property is acquired after valuation day, actual cost plus or minus adjustments after that date will give the adjusted cost basis. Valuation day for purposes of shares that are publicly traded on Canadian stock exchanges was Dec. 22, 1971 and the valuation day for all other property, such as bonds, rental property, cottages or shares in a private company was Dec. 31, 1971. Special rules apply for individuals who become, or who cease to be, residents of Canada. Gains arising out of the conduct of a business continue to be fully taxable.

Having computed his income, the individual then calculates his taxable income by deducting certain exemptions and deductions. These are: for single status, \$1,500; for married status, \$2,850; for dependent children under age 16, \$300 per child; for other dependants (as defined in the law), including dependent children over age 15 and under 21 or over 20 and attending school, \$550 per dependant; where the taxpayer is 65 years of age or over, an additional \$650; where the taxpayer is blind or confined for the whole of the taxation year to a bed or a wheelchair, an additional \$650; charitable donations, up to 20 p.c. of income; and medical expenses, the amount in excess of 3 p.c. of income. In lieu of claiming deductions for charitable donations and medical expenses an individual may claim a standard deduction of \$100.

The extra deduction for married status is reduced where the taxpayer's spouse has income in excess of \$250. The deduction of \$300 for supporting a child is reduced where the child has income in excess of \$1,000 and the deduction of \$550 is reduced where the

dependant has income in excess of \$1,050. The amount of the guaranteed income supplement, which is a payment made to individuals who have little or no income in addition to their old age pension, is deductible in computing taxable income. Individuals who have incurred business losses in other years may deduct these in computing taxable income.

As already stated, an individual who is resident in Canada is taxed on his income from both inside and outside Canada. An individual who is not resident in Canada at any time during the year but who carries on business in Canada or who earns salary or wages in Canada is taxed on the income earned in Canada. In computing taxable income earned in Canada, such a non-resident individual is allowed to deduct that part of the exemptions and deductions that may reasonably be attributed to the income earned in Canada. (A non-resident who derives investment or pension income from Canada is taxed in a different way, described on p. 1128.) An individual who ceases to be a resident of Canada during the year or who becomes a resident during the year so that he is resident for only part of the year is subject to income tax as a resident of Canada on only that part of his income for the year received while he is resident in Canada. In these circumstances, the deductions from income permitted in determining taxable income are the amounts which may reasonably be considered as applicable to the period during which he is resident in Canada.

A non-resident who disposes of taxable Canadian property (shares of Canadian public corporations are excluded unless ownership exceeds 25 p.c.) is liable for tax on one half of any capital gain. Capital gains or losses from the disposal of taxable Canadian property are combined with the non-resident's Canadian employment or business income. This taxation of capital gains is subject to restrictions in a number of tax treaties between Canada and other countries.

Two provisions were enacted in 1971 to provide for averaging income over a period of years where income for a year is unusually high. The first of these is an averaging calculation that will be made by the Department of National Revenue where an individual's income for the year is 20 p.c. more than the average of his incomes for the preceding four years and 10 p.c. more than his income for the immediately preceding year. This calculation, which will be made without application by the taxpayer, will reduce the effects of the progressive schedule of rates upon an unusual increase in income in the year. The calculation will first be made for 1973, using 1972 as the base. It will not be possible to use four preceding years in the base until 1976. The second averaging device, which first becomes effective for 1972, is by the purchase of a special type of annuity contract called an income-averaging annuity. The cost of this annuity contract is deductible from income in the year it is purchased and the annuity payments are included in income when received. Only certain kinds of income may be used to purchase an income-averaging annuity. These include capital gains, a lump sum from a pension plan, proceeds from a literary or artistic work or amounts received from activities as an athlete, musician or public entertainer.

The amount of tax is determined by applying a progressive schedule of rates to taxable income. This schedule of rates starts at 17 p.c. on the first \$500 of taxable income and increases to 47 p.c. on taxable income in excess of \$60,000. For 1972, tax otherwise payable is reduced by 3 p.c. In addition, the Income Tax Act provides that the rate of tax on the first \$500 of taxable income, which is 17 p.c. in 1972, will be reduced each year until it becomes 6 p.c. in 1976.

Individuals who reside in the Yukon or Northwest Territories or who reside outside of Canada but are deemed to be residents in Canada for tax purposes (such as diplomats and others posted outside the country) must pay an additional tax of 30 p.c. of their tax otherwise payable. This tax is intended to correspond in an approximate way to the income tax imposed by the provinces on their residents.

An individual who receives a taxable dividend from a Canadian corporation is allowed to deduct an amount called a dividend tax credit from his tax otherwise payable. This is

in recognition of the fact that the earnings from which the dividend is paid have borne corporation income tax. It also provides encouragement for Canadians to participate in ownership of Canadian corporations. The individual increases the amount of the dividends he has received by one third and includes this additional one third in his income. He then deducts from his tax an amount equal to four fifths of the additional one third that was included in his income.

An individual who receives income from foreign sources may deduct from his tax the amount of tax he has paid to a foreign government on his foreign source income. This deduction may not exceed the Canadian tax related to such income.

An individual who earns income in the Province of Quebec may deduct 24 p.c. of his tax attributable to such income. This abatement of tax is in recognition of the fact that Quebec entirely finances certain programs which are partly financed by the Federal Government in other provinces.

To a very large extent, individual income tax is payable as the income is earned. Taxpayers in receipt of salary or wages have tax deducted from their pay by their employer and in this way pay nearly 100 p.c. of their tax liability during the calendar year. The balance of the tax, if any, is payable at the time of filing the tax return on or before Apr. 30 in the following year. Individuals with more than 25 p.c. of their income in a form not subject to tax deductions at the source must pay tax by quarterly instalments throughout the year. Returns of these individuals must be filed on or before Apr. 30 in the following calendar year. Farmers and fishermen pay two thirds of their tax on or before Dec. 31 each year and the remainder on or before Apr. 30 in the following year.

The following statement shows the amount of personal income tax payable on various levels of income in 1972:—

<i>Status</i>	<i>Income</i>	<i>Federal Income Tax</i>	<i>Provincial Income Tax</i>
	\$	\$	\$
Single taxpayer—no dependants.....	1,600	—	—
	2,000	56	18
	2,500	140	44
	3,000	227	71
	5,000	599	188
	8,000	1,235	388
	10,000	1,705	536
	20,000	4,756	1,495
	50,000	16,241	5,107
	100,000	38,580	12,131
Married taxpayer—no dependants.....	3,000	—	—
	4,000	157	49
	5,000	336	106
	8,000	935	294
	10,000	1,379	434
	20,000	4,297	1,351
	50,000	15,677	4,929
	100,000	37,964	11,937
Married taxpayer—two children under age 16.....	4,000	54	17
	5,000	225	71
	8,000	813	256
	10,000	1,248	392
	20,000	4,093	1,287
	50,000	15,427	4,851
	100,000	37,690	11,851

It should be noted that in calculating the above taxes it has been assumed that all income is from salary or wages and all taxpayers take the standard deduction of \$100 and the employment expense deduction. No account has been taken of other deductions such as for child care expenses, unemployment insurance contributions or the additional old age deduction. The federal tax shown is for income earned in any province except Quebec. The special 3-p.c. reduction in 1972 has been taken into account. The provincial income tax is calculated at 30.5 p.c. of federal tax otherwise payable (i.e., before the special reduction of 3 p.c. for 1972). Some provinces impose tax at a rate higher than 30.5 p.c.

## Corporation Income Tax

The Income Tax Act levies a tax upon the income from anywhere in the world of corporations resident in Canada and upon the income attributable to operations in Canada of non-resident corporations carrying on business in Canada. One half of capital gains must be included in income.

In computing their income, corporations may deduct operating expenses including municipal real estate taxes, reserves for doubtful debts, bad debts and interest on borrowed money. The deduction for interest includes interest on money borrowed to acquire shares in another corporation. There is a limitation on the deduction of interest paid to non-residents. One half of capital losses may be deducted from the capital gains included in income.

Corporations may deduct over a period of years the capital cost of all depreciable property. The yearly deductions of normal capital cost allowances are computed on the diminishing balance principle. Regulations issued under authority of the Income Tax Act establish a number of classes of property and maximum rates. Typical rates include 5 p.c. and 10 p.c. for buildings, 20 p.c. for machinery and 30 p.c. for automobiles. Where property is disposed of for more than the amount to which it has been written down by capital cost allowances, the excess allowances are "recaptured" through an addition to income or by an adjustment to the undepreciated balance for the class of property.

Accelerated depreciation (full write-off in two years) is allowed in respect of structures and equipment acquired in the period Apr. 27, 1965 to Dec. 31, 1973 to prevent water pollution, and in the period Mar. 13, 1970 to Dec. 31, 1973 to prevent air pollution.

A taxpayer who does not elect to receive a grant under the Training-on-the-Job Program may deduct 60 p.c. of approved wage costs incurred in the period after October 1971 and before April 1974. This deduction is in addition to the normal deduction for wages. Expenditures on scientific research related to the business of the taxpayer may be written off for tax purposes in the year when incurred.

A corporation whose principal business is mining, oil production and allied activities may deduct the costs of exploration and development in Canada against any income in the year the costs were incurred or in subsequent years.

Taxpayers who do not meet the "principal business" test are entitled to deduct exploration and development expenses from mining and petroleum income. Starting in 1972, these expenses will be deductible from other income over a period of time if they exceed mining and petroleum income.

Taxpayers may deduct certain foreign drilling expenses from directly related foreign-source income. Starting in 1972, all taxpayers may put foreign exploration and development expenses in a separate asset class and deduct them over a period of time if they exceed income from foreign mineral and petroleum properties.

The profits derived during the first three years of operation of a new mine are exempt from income tax until Dec. 31, 1973. In place of the three-year tax exemption there will be an immediate write-off of capital equipment and facilities for a new mine to the extent of income from the mine. The assets eligible for this accelerated depreciation include buildings, mining machinery, processing facilities and "social capital" such as access roads, sewage plants, housing, schools, airports and docks. The accelerated write-off provision for new mines will also apply in the case of a major expansion of an existing mine where there has been at least a 25-p.c. increase in milling capacity. The list of eligible assets is the same as for new mines except that "social capital" does not qualify.

Taxpayers operating mines, oil wells, gas wells and wells for extracting potash by the solution method have been allowed a depletion allowance, usually computed as a percentage of profits (after deduction of capital cost allowances, exploration and drilling expenses and certain interest expenses) derived from mineral, oil or gas production. This allowance is in addition to capital cost allowances on buildings, machinery and similar depreciable assets

used by the taxpayer and the deduction of his exploration and drilling expenses. This will continue until the end of 1976 after which a taxpayer will be able to deduct depletion only if it has been "earned" by exploration. For every \$3 of eligible expenditures, a taxpayer will earn the right to deduct \$1 of depletion. Eligible expenditures made after Nov. 7, 1969 can be accumulated for the purpose of calculating earned depletion for 1977 and subsequent years.

Taxpayers operating timber limits receive an annual cost allowance which is a rateable proportion of the amount invested in the limit and is based on the amount of timber cut in the year.

In computing taxable income, corporations, with certain exceptions, may deduct dividends received from other Canadian taxable corporations and also from certain non-resident affiliates. Business losses may be carried back one year or forward five years and deducted in computing taxable income. Corporations may also deduct donations to charitable organizations up to a maximum of 20 p.c. of their income.

The general rates of tax payable by corporations on their taxable income are as follows: 1972, 50 p.c.; 1973, 49 p.c.; 1974, 48 p.c.; 1975, 47 p.c.; 1976 and subsequent years 46 p.c. These rates of tax are reduced by 10 percentage points on income earned in a province. This "provincial abatement" is provided to make room for provincial income taxes. At the present time, provincial rates of corporate income tax range from 10 p.c. to 13 p.c.

For profits earned in the period July 1, 1971 to Dec. 31, 1972, there is a temporary tax reduction equal to 7 p.c. of the tax otherwise payable before the 10 percentage points provincial abatement.

A "small business deduction" reduces the rate of tax on certain business income to 25 p.c. This concession is restricted to Canadian corporations which are not controlled by a non-resident corporation or by a Canadian public corporation. It applies only to income from an active business carried on in Canada and not to investment income. The maximum amount of taxable income on which the deduction may be calculated is \$50,000 in any one year. A corporation is entitled to this deduction only until it has accumulated \$400,000 of taxable income commencing with taxation years starting after 1971. The payment of taxable dividends reduces the accumulation of taxable income for purposes of this limitation. The rate of 25 p.c. referred to will not be affected by the gradual reduction in the general federal rate of corporation income tax between 1972 and 1976 but this 25-p.c. rate is reduced by the 10 percentage points provincial abatement.

A corporation that qualifies as an "investment corporation" pays tax at a rate of only 25 p.c. This rate is also reduced by the provincial abatement.

The investment income (other than dividends) of a private corporation is subject to the general rate of tax (i.e., 50 p.c. in 1972 becoming 46 p.c. in 1976 less the provincial abatement) but an amount not exceeding 25 p.c. of this income is refunded when dividends are paid to shareholders.

Dividends received by a private corporation from a Canadian corporation controlled by it are deductible in computing its taxable income (except where paid out of designated surplus or under conditions that entitle the paying corporation to a refund). Dividends received by a private corporation from portfolio investments are subject to a special 33½-p.c. tax but this is refunded when dividends are paid to shareholders.

A corporation may elect to pay a special 15-p.c. tax on its 1971 undistributed income on hand. Dividends received from this tax-paid undistributed income are not included in the income of the receiving shareholder but the amount of the dividend will reduce the adjusted cost basis of the shares for capital gains tax purposes. Dividends paid from the untaxed half of a corporation's capital gains are also excluded from the income of the recipient shareholders but with no similar reduction in the adjusted cost base of the shares for capital gains tax purposes.

Special rules are provided for the taxation of special-purpose companies such as mutual fund corporations, life insurance companies, non-resident-owned investment companies and co-operatives.

In addition to the reduction equal to 10 p.c. of taxable income earned in a province, a corporation may reduce its tax by a credit for taxes paid to foreign governments on foreign source income. This credit may not exceed the Canadian tax related to such income. A corporation may also deduct from its tax an amount equal to two thirds of a provincial tax on income from logging operations not exceeding  $6\frac{2}{3}$  p.c. of its income from logging operations in the province. (At present only Ontario, Quebec and British Columbia impose logging taxes.) Commencing in 1977, a mining corporation will be able to claim an extra federal tax abatement of 15 p.c. of its production profits in a province.

Corporations are required to pay their tax by monthly instalments throughout their taxation year. Any balance of tax remaining has to be paid by the last day of the third month following the close of the taxation year, and the return for the year must be filed by the last day of the sixth month following the close of the taxation year.

### Taxation of Non-residents

An individual or corporation not resident in Canada is liable for Canadian income tax on income from employment or from carrying on business in Canada and on one half of capital gains less losses on disposals of "taxable Canadian property". For this purpose taxable Canadian property includes: real property interests situated in Canada; assets used in carrying on business in Canada; interests in certain partnerships and trusts; shares in a corporation resident in Canada other than a public corporation; and shares in Canadian public corporations where the non-resident owns a 25-p.c. or greater interest. The taxation of capital gains may be restricted by the provisions in tax treaties between Canada and other countries.

The expression "carrying on business in Canada" includes producing, growing, packaging or improving any article in Canada and also soliciting orders or offering anything for sale in Canada through an agent or servant. However, this is usually modified by tax treaties so that an enterprise of the other country is taxed by Canada on its industrial and commercial profits only if it carries on business through a permanent establishment in this country. Tax treaties also provide some exemptions from tax on remuneration for services.

The taxable income of non-resident individuals derived from employment or carrying on business or from capital gains in Canada is taxed under the same schedule of rates as Canadian resident individuals.

Income earned by non-resident corporations carrying on business or from capital gains in Canada is taxed at the regular rates of corporation income tax. The distributable business earnings of a branch of a non-resident corporation are also subject to an additional tax often referred to as a branch tax. This tax applies to the branch earnings net of taxes that are not reinvested in the business in Canada. The branch tax, which is imposed at the same rate as the non-resident withholding tax on dividends referred to below, is designed to place non-resident corporations that carry on business through a branch in Canada in a comparable position to those non-residents that conduct their Canadian operations through a separate company incorporated in Canada.

Certain specific items of income paid to non-residents from sources in Canada are subject to tax withheld at the source by the Canadian payer. This non-resident withholding tax applies to interest (except interest on certain bonds and interest paid to certain exempt lenders), dividends, rents, royalties, management fees, income from a trust or estate, alimony, pension benefits (other than the old age security pension and up to \$1,290 of Canada Pension Plan or Quebec Pension Plan benefits), proceeds from deferred income plans and the taxable portion of annuities. The rate of this tax is generally 15 p.c. but

the rate on royalties from motion picture and television films is only 10 p.c. and the standard rate of 15 p.c. on dividends is reduced to 10 p.c. in the case of dividends paid by a corporation that has a degree of Canadian ownership.\*

The Income Tax Act provides that the rate of the above-mentioned non-resident withholding tax will become 25 p.c. in 1976, except for the rate on dividends paid by a corporation with a degree of Canadian ownership which will be 20 p.c. These rates may be modified by tax treaties.

Generally, non-residents who receive from sources in Canada only the kinds of income subject to the non-resident withholding tax do not file returns to Canada. However, those who receive rents on real property, timber royalties, pension benefits or proceeds from deferred income plans may elect to file returns and be taxed at personal or corporation rates as the case may be.

### Estate and Gift Taxes

The Federal Government formerly imposed an estate tax and a tax on gifts. These taxes do not apply in the case of a death occurring after 1971 or to a gift made after 1971.

### Excise Taxes

The Excise Tax Act levies a general sales tax and special excise taxes. These taxes are levied on goods imported into Canada as well as on goods produced in Canada. They are not levied on goods exported.

The general sales tax is at the rate of 12 p.c. It is levied on the manufacturer's sale price of goods produced or manufactured in Canada or on the duty-paid value of goods imported into Canada. "Duty-paid value" includes the amount of customs duties, if any. For alcoholic beverages and tobacco products the sale price for purposes of the sales tax includes excise duties levied under the Excise Act referred to below. The rate of sales tax on a long list of building materials is 11 p.c. instead of 12 p.c.

Some goods are exempt from sales tax. Drugs, electricity, fuels for lighting or heating and most foodstuffs are exempt, and also articles and materials purchased by public hospitals and certain welfare institutions. The products of farms, forests, mines and fisheries are, to a large extent, exempt as well as most equipment used in farming and fishing. Machinery and equipment used directly in production and materials consumed or expended in production are also exempt, and also equipment acquired by manufacturers or producers to prevent or reduce pollution to water, soil or air from their manufacturing operations. A number of items are exempt when purchased by municipalities. These and other exemptions are set forth in schedule to the Excise Tax Act.

The Excise Tax Act also imposes a number of special excise taxes which are in addition to the sales tax. Where these are ad valorem taxes they are levied on the same price or duty-paid value as the general sales tax. The special excise taxes levied at present are as follows:—

Cigarettes.....	3 cents per 5 cigs.
Cigars.....	17½ p.c. ad valorem
Pipe tobacco, cut tobacco, snuff.....	90 cents per lb.
Jewellery, including articles of ivory, amber, shell, precious or semi-precious stones, clocks, watches, goldsmiths' and silversmiths' products, except gold-plated or silver-plated ware for the preparation or serving of food or drink.....	10 p.c. ad valorem
Lighters.....	10 cents per lighter
Playing cards.....	20 cents per pack
Slot machines—coin, disc or token-operated games or amusement devices..	10 p.c. ad valorem
Matches.....	10 p.c. ad valorem
Tobacco, pipes, cigar and cigarette holders and cigarette rolling devices....	10 p.c. ad valorem
Toilet articles, including cosmetics, perfumes, shaving creams, antiseptics, etc.....	10 p.c. ad valorem

\* Generally, a corporation is regarded as having a degree of Canadian ownership where 25 p.c. of its equity and voting shares are owned by Canadians and/or corporations controlled in Canada, or where the voting shares of the corporation are listed on a Canadian stock exchange and no more than 75 p.c. of its issued outstanding voting shares are owned by a non-resident alone or in combination with related persons.

## Wines—\*

Wines of all kinds containing not more than 7 p.c. absolute alcohol by volume.....	25 cents per gal.
Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume but not more than 40 p.c. proof spirit.....	50 cents per gal.
Sparkling wines.....	\$2.50 per gal.

## Wines (additional excise taxes)—†

Wines of all kinds containing not more than 7 p.c. of absolute alcohol by volume.....	2½ cents per gal.
Wines of all kinds containing more than 7 p.c. of absolute alcohol by volume.....	5 cents per gal.

Insurance premiums paid to British or foreign companies not authorized to transact business in Canada or to non-resident agents of authorized British or foreign companies.....	10 p.c. of net premium for property surety, fidelity and liability insurance. (Most other kinds of insurance are exempt.)
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------

All the foregoing items, except insurance premiums, are also subject to the general sales tax of 12 p.c. Cigarettes, cigars and tobacco are subject to additional taxes under the Excise Act (referred to as excise duties).

## Excise Duties

The Excise Act levies taxes (referred to as excise duties) upon alcohol, alcoholic beverages (other than wines) and tobacco products. These duties are not levied on imports but the customs tariff applies special duties to these products equivalent to the excise duties levied on the products manufactured in Canada. Exported goods are not subject to excise duties.

*Spirits.*—The duties are on a proof gallon basis. These duties do not apply to denatured alcohol intended for use in the arts and industries, or for fuel, light or power, or any mechanical purposes. The various duties are as follows:—

On every gallon of the strength of proof distilled in Canada.....	\$14.25
On every gallon of the strength of proof used in manufacture of—	
Medicines, extracts, pharmaceutical preparations, etc.....	\$1.50 per gal.
Approved chemical compositions.....	15 cents per gal.
Spirits sold to a druggist and used in the preparation of prescriptions.....	\$1.50 per gal.
Imported spirits when taken into a bonded manufactory in addition to other duties.....	30 cents per gal.

*Canadian Brandy.*—Canadian brandy (a spirit distilled exclusively from juices of native fruits without the addition of sweetening materials) is subject to a duty of \$12.25 per proof gallon.

*Beer.*—All beer or other malt liquor is subject to a duty of 42 cents per gallon.

*Tobacco, Cigars and Cigarettes.*—Excise duties are imposed on these products in addition to the special excise taxes which have already been described. The rates of excise duty are as follows:—

On manufactured tobacco of all descriptions, except cigarettes.....	35 cents per lb.
Cigarettes weighing not more than three lb. per thousand (nearly all of the cigarettes used in Canada are of this type).....	\$4 per thousand
Cigarettes weighing more than three lb. per thousand.....	\$5 per thousand
Cigars.....	\$2 per thousand
Canadian raw leaf tobacco when sold for consumption.....	10 cents per lb.

\* These taxes apply only to wines manufactured in Canada. The customs tariff on wines includes a levy on imported wines to correspond to the taxes on domestic production.

† These taxes apply to both domestic and imported wines.

### Total Taxes on Tobacco Products

The aggregate of the taxes imposed on tobacco products under the Excise Tax Act and the duties imposed under the Excise Act is as follows:—

Cigarettes.....	\$10 per thousand (20 cents per pack of 20 cigarettes) plus the 12-p.c. sales tax on the manufacturer's sale price.
Pipe and cut tobacco.....	\$1.25 per lb. plus the 12-p.c. sales tax on the manufacturer's sale price.
Cigars.....	\$2 per thousand plus the 17½-p.c. special excise tax and the 12-p.c. sales tax on the manufacturer's sale price.

### Customs Duties\*

Most goods imported into Canada are subject to customs duties at various rates as provided by tariff schedules. Customs duties which once were the chief source of revenue for the country have declined in importance as a source of revenue to the point where they now provide less than 10 p.c. of the total. Quite apart from its revenue aspects, however, the tariff still occupies an important place as an instrument of economic policy.

The Canadian Tariff consists mainly of three sets of rates, namely, British Preferential, Most-Favoured-Nation and General. The British Preferential rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped directly to Canada from countries within the British Commonwealth. Special rates lower than the ordinary preferential duty are applied on certain goods imported from designated Commonwealth countries.

The Most-Favoured-Nation rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. Canada has Most-Favoured-Nation arrangements with almost every country outside the Commonwealth. The most important agreement providing for the exchange of Most-Favoured-Nation treatment is the General Agreement on Tariffs and Trade.

The General Tariff applies to imports from countries not entitled to either the British Preferential or Most-Favoured-Nation treatment. Few countries are in this category and in terms of trade coverage are negligible.

In all cases where the tariff applies there are provisions for drawbacks of duty on imports of materials used in the manufacture of products later exported. The purpose of these drawbacks is to assist Canadian manufacturers to compete with foreign manufacturers of similar goods. There is a second class of drawbacks known as "home consumption" drawbacks. These apply to imported materials used in the production of specified classes of goods manufactured for home consumption.

The tariff schedules are too lengthy and complicated to be summarized here but the rates which apply on any particular item may be obtained from the Department of National Revenue which is responsible for administering the Customs Tariff.

### Subsection 2.—Provincial Taxes†

All of Canada's ten provinces impose a wide variety of taxes to raise the revenue necessary for provincial purposes. All provinces levy a tax on the income of individuals and corporations resident within their boundaries or deriving income from activities or operations carried out therein. Only the provinces of Ontario and Quebec impose special taxes on corporations in addition to income tax. All the provinces except Alberta impose a tax on property passing at death, referred to as succession duties; these provinces also impose a tax on gifts. Under the terms of the existing federal-provincial fiscal arrangements, the Federal Government makes "equalization payments" to some provinces in recognition of the fact that the potential tax yield in those provinces, measured on a per capita basis, is lower than the national per capita tax yield. For some provinces, the equalization payments constitute a very important source of revenue.

\* See also p. 1105.

†Revised (September 1971) by the provincial authorities concerned, except for certain changes resulting from federal tax reform amendments which became effective Jan. 1, 1972.

Some of the more important provincial levies are reviewed briefly on this and following pages.

### Individual Income Tax

All provinces levy a tax on the income of individuals who reside within their boundaries or who earn business income therein. An individual who is resident in a particular province on the last day of the year, and has no income for the year from a business with a permanent establishment outside the province, is taxable by the province on his world income for the year. Income earned from employment in a province by a non-resident of Canada is taxable by the province. Income earned by an individual not resident in a particular province from carrying on a business through a permanent establishment in that province is taxable by that province.

In nine of the ten provinces, the provincial taxes are computed as a percentage of federal tax. "Federal tax", on which the provinces impose their tax, is after the dividend tax credit but before any foreign tax credit or the special 3-p.c. reduction for 1972. In the Province of Quebec, provincial income tax is levied at graduated rates that progress from 10 p.c. on the first \$2,000 of taxable income to a maximum of 28 p.c. on the excess over \$60,000. The determination of taxable income for Quebec tax is based on exemptions and deductions which, with the exception of deductions for dependent children under age 18,\* are similar to those for federal tax. Quebec taxpayers who have married status for tax purposes do not pay the provincial tax unless their income exceeds \$4,000; all other Quebec taxpayers do not pay the tax unless their income exceeds \$2,000.

The following statement shows the percentage that provincial income tax liability is of federal tax for 1972:—

<i>Province</i>	<i>P.C. of Federal Tax</i>	<i>Province</i>	<i>P.C. of Federal Tax</i>
Newfoundland.....	36	Ontario.....	29.585
Prince Edward Island.....	36	Manitoba.....	42.5
Nova Scotia.....	38.5	Saskatchewan.....	37
New Brunswick.....	41.5	Alberta.....	36
Quebec—not directly related to federal tax but is approximately 58 p.c. of federal tax		British Columbia.....	30.5

All provinces except Quebec have signed agreements for the collection of their individual income tax by the Federal Government.

### Corporate Income Tax

All provinces levy a tax on the taxable income of corporations derived from activities carried out within their boundaries. In all provinces except Ontario and Quebec, the provincial tax imposed on taxable income in the province is determined on the same basis as for federal income tax. In Ontario and Quebec, the determination of taxable income for purposes of provincial tax follows closely the federal rules. Six of the ten provinces levy corporate income taxes at rates in excess of the 10-p.c. abatement allowed by the Federal Government. The rate that applies in Saskatchewan and Alberta is 11 p.c., in Ontario and Quebec, 12 p.c., and in Newfoundland and Manitoba, 13 p.c. All provinces except Ontario and Quebec have signed agreements for the collection of the corporate income taxes by the Federal Government.

### Taxes on Alcoholic Beverages and Tobacco

Generally speaking, the sale of spirits in all provinces is made through provincial agencies operating as boards or commissions which exercise monopolistic control over alcoholic beverages. The provincial mark-up over the manufacturer's price (usually on top of the government established price) is the effective means of taxation. Beer and wine

\* Quebec has a family allowance program which supplements the federal program; it provides for half-yearly allowances that range from \$15 for one child to \$142.50 for six, and an extra \$35 for each child after the sixth. The Quebec program is in lieu of exemptions for provincial income tax purposes for children eligible for family allowances. (See also p. 345.)

may be sold by retailers or government stores, depending on the province, but in all cases these sales contribute to provincial revenues. The Province of Prince Edward Island imposes a tax of 10 p.c. on all beer, wine and spirits sold at retail, collected under authority of the Health Tax Act, and in Newfoundland a tax of 7 p.c. is imposed at retail level.

All provinces impose special retail taxes on the sale of tobacco products. The rates of tax on cigarettes are as follows: Newfoundland,  $\frac{1}{2}$  cent per cigarette; Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario and Manitoba,  $\frac{3}{5}$ ths cent per cigarette; and Saskatchewan, Alberta and British Columbia,  $\frac{2}{5}$ ths cent per cigarette. In addition, the provinces impose special taxes on cigars and cut tobacco.

### Retail Sales Taxes

Retail sales taxes are levied on the final purchaser or user and are collected by the retailer. All provinces except Alberta levy this type of tax at rates as follows: Newfoundland and Nova Scotia, 7 p.c.; Prince Edward Island, New Brunswick and Quebec, 8 p.c.; and Ontario, Manitoba, Saskatchewan and British Columbia, 5 p.c. These direct levies apply to tangible taxable commodities sold, with varying exemptions, for consumption in the province and to a few selected services, for example: to telephone services in all provinces; in Quebec, to telecommunications, meals and hotel and motel charges; in Prince Edward Island, to laundry and dry cleaning services, to accommodations, and to repair and installations labour; in New Brunswick, to telecommunications, to meals and hotel and motel charges and to laundry and dry cleaning charges; and in Manitoba, to a broad range of services including dry cleaning, furniture repairs, motel accommodation, etc. The sales taxes do not apply to goods sold for delivery in other provinces or to exported commodities. All provinces imposing sales taxes provide comprehensive exemptions for foodstuffs and drugs; in Quebec and New Brunswick, pharmaceutical products are exempt only when sold on prescription. In British Columbia, a 5-p.c. levy on accommodations is made under the Hotel and Motel Room Tax Act.

### Amusement Taxes

Each of the provinces with the exception of Newfoundland, Alberta, Saskatchewan and British Columbia has a tax on admission to places of entertainment. In Quebec, this tax is payable on race course admissions only. In addition, there is generally a licence fee imposed on the operator or owner of these amusement places. The tax on admissions is within the range of 5 p.c. to 15 p.c.

### Gasoline and Diesel Fuel Oil Taxes

Each of the ten provinces imposes a tax on the purchase of gasoline by motorists and truckers. The rates vary from 15 cents per gallon in Alberta and British Columbia to 21 cents in Prince Edward Island and 25 cents in Newfoundland. The amount of tax borne by one gallon of motor vehicle fuel in each province is as follows:—

<i>Province</i>	<i>Gasoline</i>	<i>Diesel Fuel</i>	<i>Province</i>	<i>Gasoline</i>	<i>Diesel Fuel</i>
	cts.	cts.		cts.	cts.
Newfoundland.....	25	25	Ontario.....	18	24
Prince Edward Island	21	21	Manitoba.....	17	20
Nova Scotia.....	21	27	Saskatchewan.....	19	21
New Brunswick.....	20	23	Alberta.....	15	17
Quebec.....	19	25	British Columbia.....	15	17

Certain qualifications apply to the above taxes, as follows: in Prince Edward Island, gasoline and diesel fuel used by primary producers—farmers, fishermen, manufacturers and processors—are exempt from tax as are also gasoline and motor fuel used by owners or operators of ski-tows, and that used by consumers engaged in the construction of the Northumberland Strait Crossing; in Quebec and Ontario, some relief from taxation is given where gasoline or fuel oil is used for farming, manufacturing, commercial fishing and in stationary engines; in Manitoba, exemptions or refunds are allowed on fuel used in operating

agricultural machinery, farm trucks and municipal fire apparatus, and in trapping, fishing and prospecting; in Saskatchewan, gasoline and diesel fuel used by farmers in farm machinery and trucks are exempt from tax; in Alberta, tax on fuel for domestic heating is three cents less than shown, gasoline and diesel fuel used in aircraft, motor boats, snowmobiles and off-highway internal combustion engines are taxed at three cents per gallon and exemption is allowed for other uses, including farm trucks and machinery; and in British Columbia the net tax rate (after refund) on gasoline used in logging trucks off highway, in certain power units of motor vehicles for stationary industrial use and in vehicles used by certain handicapped persons, and on motor fuels coloured purple for certain off-highway use (including marine) and on aviation fuels is three cents per gallon, on motor fuels coloured purple used by bona fide farmers and commercial fishermen the rate is one cent per gallon, and on fuel oil for heating purposes is one half cent per gallon.

### **Motor Vehicle Licences and Fees**

Each province levies a fee on the annual registration of motor vehicles, which is compulsory. Upon registration, a vehicle is issued with licence plates. The rates of fee vary from province to province and, in the case of passenger cars, may be assessed on the weight of the vehicle, the wheel base, the year of manufacture, the number of cylinders of the engine, or at a flat rate. The fees for commercial motor vehicles and trailers are based on the gross weight for which the vehicle is registered, i.e., the weight of the vehicle empty plus the load it is permitted to carry. Every operator or driver of a motor vehicle is required to register periodically and pay a fee for a new driver's licence. The licences are valid for periods of from one to five years and the fees vary from \$1 to \$7 a year.

### **Taxes on Mining Operations**

All provinces except Prince Edward Island levy taxes of various kinds on mining operations. All provinces impose a tax on the income of firms engaged in mining operations in general or in specific kinds of mining operations. The Provinces of British Columbia, Alberta, Saskatchewan and Manitoba (gas, oil and potash only) impose a tax on the assessed value of minerals or a flat rate per acre of mining property. Quebec levies a tax on the economic value of ore at the pithead in excess of \$50,000, ranging between 9 and 15 p.c., depending on volume. Ontario imposes a tax on the profit on the assessed value of minerals and a flat rate per acre of mining property. Manitoba imposes a flat rate of 15 p.c. if mining income exceeds \$50,000. The British Columbia mining tax rate is 15 p.c. on net income from mining in excess of \$10,000.

### **Tax on Logging Operations**

The Provinces of Quebec, Ontario and British Columbia levy a tax on the income from logging operations of individuals, partnerships, associations or corporations engaged in this activity. In Quebec and Ontario the rate is 10 p.c. and in British Columbia 15 p.c. on net income where in excess of \$10,000 (in Quebec and British Columbia if the net income is greater than \$10,000 the whole amount is taxable with no basic exemption). In Ontario and Quebec one third and in British Columbia 20 p.c. of the tax is allowed as a deduction from provincial corporate income tax or, in Quebec, from the provincial income tax; two thirds of the provincial tax is deductible from federal income tax.

### **Business Taxes**

The Province of Quebec imposes a tax of one fifth of 1 p.c. on paid-up capital of corporations and Ontario levies a similar tax at the rate of one tenth of 1 p.c.

The Province of Quebec has a place-of-business tax, which is generally \$50 but is reduced to \$25 when the paid-up capital is less than \$25,000; in the case of loan companies, the tax is \$100 when fixed capital exceeds \$100,000.

Both Ontario and Quebec levy special taxes on certain kinds of companies such as banks, railway companies, express companies, trust companies and sleeping-car, parlour-car

and dining-car companies. In Ontario, these special taxes and the paid-up capital tax are payable over and above the corporation income tax.

The Province of Prince Edward Island charges special annual licence fees to most insurance companies, banks, acceptance companies, chain theatres and chain stores, steamship companies, telephone, telegraph and electric light companies and brokers, as well as nominal licence fees to other incorporated companies, the latter being similar to filing fees in other provinces.

### Land Transfer Taxes

Ontario levies a tax based on the price at which ownership of land is transferred; one fifth of 1 p.c. is imposed on the purchase price up to \$25,000 and two fifths of 1 p.c. on anything in excess of that amount. In Alberta, a registration fee is charged proportional to the registered value of the land; \$5 for the first \$1,000 and \$1 for each additional \$1,000 up to \$25,000 and 50 cents per \$1,000 in excess of that amount; in addition, there is an Assurance Fund fee charged on transfers of mortgages on the difference between the old registered price and the new registered price at the rate of \$2 per \$1,000 up to \$5,000 and \$1 for each additional \$1,000. British Columbia and Saskatchewan do not have a land transfer tax but have an equivalent in land title fees which are based on land values.

### Tax on Security Transfers

The Provinces of Ontario and Quebec levy a tax on the sale price of securities transferred; the rates in both provinces are:—

Shares sold, transferred or assigned valued at—	
Under \$1.....	$\frac{1}{10}$ th of 1 p.c. of value
\$ 1 to \$ 5.....	$\frac{1}{2}$ cent per share
\$ 5 to \$ 25.....	1 cent per share
\$25 to \$ 50.....	2 cents per share
\$50 to \$ 75.....	3 cents per share
\$75 to \$150.....	4 cents per share
Over \$150.....	4 cents per share plus $\frac{1}{10}$ th of 1 p.c. of value in excess of \$150
Bonds and debentures.....	3 cents for every \$100 or fraction thereof of par value.

### Tax on Premium Income of Insurance Companies

All ten provinces impose a tax of 2 p.c. on the premium income of insurance companies relative to risks incurred in the province; in Alberta, this tax is imposed on the premium income after deducting dividends and refunds. Saskatchewan imposes a tax of 1 p.c. on the motor vehicle premium income of insurance companies to finance a comprehensive high school driver-training program.

### Succession Duties and Gift Taxes

All the provinces except Alberta levy succession duties. These duties are a tax upon a succession to property of a deceased person by his beneficiary. The Provinces of Ontario, Quebec and British Columbia collect their own succession duties. The four Atlantic Provinces and Manitoba and Saskatchewan reimposed succession duties with effect from Jan. 1, 1972. The duties levied by these six provinces will be collected by the Federal Government as agent under three-year collection agreements.

All the provinces except Alberta levy a gift tax. This is a tax on the total value of gifts made in the year by a living person resident in the province. It is intended primarily to protect the revenue from succession duties. For all provinces, except Quebec and Alberta, the tax will be collected by the Federal Government as agent under collection agreements. Quebec administers its own gift tax.

### Provincial Property Taxes

In unorganized (non-municipal) areas, British Columbia levies property taxes at varying rates according to class for provincial revenue. Improved, forest and tree-farm lands are taxed at 1 p.c. of assessed value; farm land at one half of 1 p.c.; wild land at 3 p.c.;

coal land at 2 p.c. (non-operating) or 7 p.c. (operating); and timber land at  $1\frac{1}{2}$  p.c. In unorganized (non-municipal) areas, Ontario levies a property tax of  $1\frac{1}{2}$  p.c. of assessed value; the minimum annual tax in respect of any land is \$6. New Brunswick levies a tax of \$1.50 per \$100 market value assessment on all land and buildings in the province and a similar tax on business occupancy, to finance education, health, welfare and justice services.

### Race Track Taxes

Ontario levies a tax on operators of race meets and on holders of winning tickets issued under the pari-mutuel system. Holders of winning tickets must pay a tax equal to 7 p.c. of the amount that would be payable to them if no percentage were deducted by the person holding the race meet. A number of other provinces levy a pari-mutuel tax on money bet in the province on horse races: in Newfoundland the rate is 11 p.c.; in Prince Edward Island  $11\frac{1}{2}$  p.c.; in Nova Scotia 11 p.c. on the first \$400,000 wagered and a reduced percentage on any additional money wagered (some of this money is refundable to the individual race tracks); in New Brunswick 11 p.c. less commission of 8 p.c.; in Manitoba 10 p.c. less commission of 15 p.c. on the first \$10,000,000 and 5 p.c. thereafter; in Alberta 5 p.c.; in Saskatchewan 10 p.c.; and in Quebec 7 p.c. on ordinary pools and 9 p.c. on special pools (quinella and daily-double). In British Columbia the tax is 12 p.c. but the province returns  $2\frac{1}{2}$  p.c. of money bet to horsemen and track operators for purses, etc.

### Miscellaneous Provincial Taxes

In Newfoundland a tax of 7 p.c. is levied on premiums paid for all types of insurance except life, accident and sickness, and marine; and a telegraph tax is levied on companies operating cables or wireless stations between Newfoundland and points outside the province at the yearly rate of \$4,000 a cable or station.

In Prince Edward Island a fire marshal's tax is levied at the rate of three fourths of 1 p.c. on premiums paid for fire insurance. In Nova Scotia a fire marshal's tax is levied at the rate of one half of 1 p.c. on premiums paid for fire insurance in the province. A tax is also levied on long-distance telephone calls at the rate of five cents on the first 50 cents with a five-cent minimum and five cents on each additional 50 cents, applying only to calls made within the province.

### Subsection 3.—Local Taxes

The municipalities in Canada levy taxes on the owners of property situated within their jurisdiction according to the assessed value of such property. Methods of determining assessed value vary widely but for taxation purposes it is generally considered to be a percentage of the actual value or, as in Nova Scotia and New Brunswick, of the actual market value. The revenues from such taxes are used generally to pay for street maintenance, schools, police and fire protection, snow removal in certain communities and other community services; in New Brunswick the municipal levy is used only for property service. Special levies are sometimes made on the basis of street frontage to pay for local improvements to the property, such as sidewalks, roads and sewers. Not only is there a widespread difference in the bases used for property tax but there is also a wide variety of rates applied, depending on the municipality.

In addition to the taxes described above, municipalities usually impose a charge for the water consumption of each property holder or a water tax based upon the rental value of the property occupied. In New Brunswick, utilities (water, domestic sewerage and treatment, and electric power) must be financed on a user-charge basis; a part of the water budget may be transferred to the general budget on a hydrant-rental basis or a percentage of the budget, depending on the size of the municipal population. There are no municipal income taxes although certain localities have retained the use of a poll tax. In Newfoundland, Quebec and Saskatchewan, municipalities are empowered to levy an amusement tax on the admission of persons to places of entertainment, although the amusement tax is generally a provincial preserve (see p. 1133). Electricity and gas are taxed at the consumer level in some western municipalities and in some New Brunswick municipalities, and coal

and fuel oil for heating purposes are chargeable in urban areas of Newfoundland. Telephone subscribers are subject to a special levy in Montreal and certain Ontario municipalities impose a tax on the gross receipt of telephone companies.

In most municipalities, a tax is levied directly on the tenant or the operator of a business. In general, business tax rates are lower than those applying to property. In New Brunswick, business assessment is equal to the value of the real property occupied for business purposes. Three bases of assessment are in use—a fraction of the property assessment, the annual rental value of the premises, or the area of the premises. Certain municipalities may charge a licence fee instead of a business tax but others charge both a licence fee and a business tax.

#### **Subsection 4.—Miscellaneous Levies**

These are not generally referred to as taxes but they are similar to taxes in many ways.

#### **Unemployment Insurance**

A national program of unemployment insurance operates in Canada. Amendments in 1971 made substantial changes. The program now provides benefits to qualified persons who are temporarily without work including persons unable to work because of sickness, disability or pregnancy. The program is administered by a federal commission appointed for this purpose. It is generally financed by contributions from both employees and employers. But when the national unemployment rate exceeds 4 p.c., or in certain circumstances when the regional unemployment rate exceeds the national unemployment rate, the Federal Government bears costs arising on these accounts. The amount of an employee's contribution is calculated weekly at a rate of 0.9 p.c. of earnings to a maximum of \$1.35 per week. The employer's rate of contribution in respect of an employee varies according to the "risk of lay-off factor" which varies according to the type of industry of the employer. Both the employee's and the employer's contribution rate may be scaled down if the employer provides his employees with a sickness and disability insurance plan meeting specific standards. Furthermore, a reduced scale of contributions operates in respect of groups of employees which have just been brought into the unemployment insurance plan for the first time in 1972 under the new legislation. The reduced scale of contributions applies for 1972, 1973 and 1974, during which the rates are respectively 40 p.c., 60 p.c. and 80 p.c. of the contribution otherwise payable. The rates of contributions, together with statistics on the operation of the program, are given at pp. 859-864.

#### **Workmen's Compensation**

Legislation in force in all provinces provides compensation for personal injury suffered by workmen as a result of industrial accidents. In general, these provincial statutes establish an accident fund administered by a Board to which employers are required to contribute at a rate proportional with the hazards of the industry. See also pp. 830-831.

#### **Hospital Insurance**

A hospital insurance plan is in operation in each of the ten provinces. In all provinces but Quebec, the program is a joint federal-provincial undertaking where approximately half of the cost of hospitalization for patients who are participants under the plan is met by the Federal Government and the remainder by the province. In Quebec the program is entirely a provincial undertaking. The share of cost normally carried by the Federal Government in the other provinces has been assumed by the Province of Quebec in exchange for fiscal compensation by way of a larger occupation of the field of personal income tax. Some provinces finance their share of the cost of the program by taxes and other provinces require the deduction of a monthly premium from the wages of their residents as a contribution or premium for the plan. In such provinces non-salaried people must also pay the premium directly if they wish to be covered by the plan. In some other provinces the proceeds of a retail sales tax are earmarked in whole or in part for the support of the hospital plan. See also pp. 291-294.

### Canada and Quebec Pension Plans

In 1966, the Canada Pension Plan, a compulsory government-operated pension program, was introduced whereby each contributor builds up a right to a graduated pension, the amount of which is related to his earnings up to a certain level. This graduated benefit supplements the universal old age security pension which is paid out of tax revenues. It operates throughout the country except in the Province of Quebec where a similar pension plan is operated by the government of the province. The maximum amount contributed by an employee in 1972 is \$88.20; the employee's contribution is matched by a contribution by his employer. Both plans have disability and survivor benefits. They are described at pp. 338-342.

### Medicare

A national medical care plan involving the joint participation of federal and provincial governments now operates in all provinces. As in the case of hospital insurance, this program requires approximately a 50-p.c. financing contribution from each level of government. In some provinces premiums must be paid for this plan; in others, the provincial share is raised through taxation. (See also pp. 288-289.)

## Section 3.—Federal Government Finance

Subsection 1 of this Section contains financial statistics of the Federal Government prepared as far as possible in accordance with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the *Canada Gazette*. Detailed reports published by Statistics Canada provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and 2. The *Canada Gazette* presentation is included because there is interest in and use for information on this basis.

### Subsection 1.—Statistics Canada Statistics of Federal Government Finance

**Revenue and Expenditure.**—Table 3 shows details of gross general revenue of the Federal Government for the years ended Mar. 31, 1969 and 1970.

**Guaranteed Debt.**—In addition to the direct debt already dealt with, the Government of Canada has assumed certain contingent liabilities. The major categories of this indirect or contingent debt are the guarantee of insured loans under the National Housing Act and the guaranteed bonds and debentures of the Canadian National Railways. The remainder consists chiefly of guarantee of loans made by chartered banks to the Canadian Wheat Board, to farmers and to university students and of guarantees under the Export Development Act.

Guarantees to owners of returns from moderate rental housing projects <sup>5</sup> .....	Unstated	Indeterminate

<sup>1</sup> Liability is subject to exchange rate in effect June 15, 1975.<sup>2</sup> As at Dec. 31, 1970.<sup>3</sup> As reported

(in accordance with Section 45, National Housing Regulations) by approved lenders as at Dec. 31, 1970.

<sup>4</sup> Includes contingent liability in respect of alternative payments to non-participating province.<sup>5</sup> As at Dec.

31, 1970, funds totalling \$6,041,693 were held by the Central Mortgage and Housing Corporation for the purpose of settling claims. In 1970, rental contracts totalled \$7,734,000.

Table 12 summarizes the national debt position during the period 1962-71 as to interest and amount outstanding. Details of unmatured debt and treasury bills outstanding and information on new security issues of the Federal Government may be found in the *Public Accounts of Canada*. They are summarized by standard classification in Statistics Canada publication *Federal Government Finance, Revenue and Expenditure* (Catalogue No. 68-211).

estimates of population for June 1 of the year immediately preceding the one indicated.

### Subsection 3.—Revenue from Taxation

The incidence of Federal Government taxation is dealt with at pp. 1122-1131. This Subsection includes statistical data on revenue received from individual income tax, corporation tax, estate tax, excise duties and excise taxes; customs receipts constitute a single item in the *Public Accounts of Canada* and are not included here.

#### Individual and Corporation Income Tax

Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include employer remittances of tax deductions and Canada Pension Plan contributions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year; they cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and as a single cheque from one employer may frequently cover the tax payment of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 13 pertain to revenue collections by the Department of National Revenue, Taxation. The collections are for fiscal years ended Mar. 31.

#### 13.—Revenue Collected by the Department of National Revenue, Taxation, Years Ended Mar. 31, 1962-71

NOTE.—All collection figures in this table are net of refunds.

Year Ended Mar. 31—	Income Tax <sup>1</sup>				Estate Tax	Total Collections

<sup>1</sup> Includes old age security tax and provincial income tax collected by the Department of National Revenue, Taxation.

<sup>2</sup> Includes non-resident withholding tax; from 1966, includes Canada Pension Plan contributions by employers, employees and self-employed persons; for 1969, 1970 and 1971, includes social development tax.

**Income Tax Statistics.**—Individual income tax statistics are presented in Tables 14 to 16 on a calendar-year basis and are compiled from a sample of all returns received. Taxpayers and amounts of income and tax are shown for selected cities and by occupation and income classes. Table 17 gives statistics of corporation income tax by industry group by size of assets.

### Succession Duties and Estate Taxes

From Jan. 1, 1947 to Mar. 31, 1963, only Ontario and Quebec levied succession duties, the other provinces having leased this field to the Federal Government under the terms of the federal-provincial tax agreements (see p. 1122). However, British Columbia re-entered the field, effective for all deaths occurring on or after Apr. 1, 1963. The incidence of the estate tax since that time is discussed at pp. 1129 and 1135. Federal revenue from succession duties and estate taxes in the year ended Mar. 31, 1971 amounted to \$119,835,070. In the same year, provincial revenues from succession duties in Quebec, Ontario and British Columbia were \$44,631,000, \$73,182,000 and \$22,722,000, respectively.

### Excise Taxes

Excise taxes collected by the Excise Division of the Department of National Revenue are given for the years ended Mar. 31, 1969-71 in Table 18.

**18.—Excise Taxes Collected, by Commodity, Years Ended Mar. 31, 1969-71**

<sup>1</sup> Net after deduction of refunds and drawbacks; excludes tax credited to the old age security fund.

### Excise Duties

Gross excise duties collected are given in the following statement for the years ended Mar. 31, 1969-71. The totals do not agree with net excise duties as shown in Table 8 because refunds and drawbacks are included. A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid.

## Section 4.—Federal-Provincial Conditional Grants and Shared-Cost Programs\*

During the year ended Mar. 31, 1970, federal expenditures on joint federal-provincial programs, which had experienced a slowdown in their rate of increase during 1968-69, picked up again as a result of the entry of five provinces in the medicare plan. These

\* As at January 1972. Prepared in the Federal-Provincial Relations Division, Department of Finance, Ottawa

programs take three forms: (1) the Federal Government contributes financial assistance to a program administered by a province; (2) the federal and provincial governments each assumes the sole responsibility for the construction, administration and financing of separate aspects of a joint project; or (3) the province contributes financially to a joint program administered by the Federal Government.

The first category of joint programs is by far the most common and such programs are commonly called conditional grant programs. They are characterized by the Federal Government agreeing to make money available to a province on certain conditions, such conditions always specifying the field, service or project to which the money must be applied. In addition to being entrusted with the administration of programs, the provinces may be required to make financial contributions to such programs, to provide certain facilities, and to meet certain specified standards in operating them. The various programs in the field of social policy are good examples of conditional grant programs. Under the hospital insurance program, for instance, the Federal Government undertakes to contribute to participating provinces a specified share of the costs incurred by the provinces in respect of public hospital insurance programs. The federal contribution in each province is equal to 25 p.c. of the average per capita cost of in-patient services in Canada as a whole plus 25 p.c. of the average per capita cost of in-patient services in the province multiplied by the average for the year of the number of insured persons in the province.

Although the hospital insurance program, with its specifications of eligible hospitals, sharable costs and the amount of the federal contribution, is characteristic of many conditional grant programs, there are others in which the conditions are nominal. For example, under the Canada Assistance Plan the Federal Government undertakes to share one half of the cost of welfare paid to recipients in need, the scale and conditions of the assistance to be determined by the provinces. In general, it may be said that the hospital insurance program conforms to the traditional pattern of conditional grants, whereas the Canada Assistance Plan marks an approach in which flexibility and adaptability to local circumstances is allowed to modify insistence on a national uniform standard.

Joint programs in the second category—those in which the federal and provincial governments accept sole responsibility for portions of a total project—are not numerous and are generally of a public works type. The irrigation projects carried out jointly by the Prairie Farm Rehabilitation Administration and the Province of Alberta on the St. Mary's and Bow Rivers in southern Alberta were of this nature. In the St. Mary's irrigation project, the Federal Government undertook the responsibility for the construction of all main reservoirs, large dams and connecting works, and Alberta assumed responsibility for the construction of the distribution system and the development and colonization of the new irrigable areas.

Joint programs in the third category are also few in number and the sums of money involved are seldom large. The South Saskatchewan River dam was an example; Canada undertook to pay the costs of the dam in the first instance, with Saskatchewan subsequently reimbursing Canada for one quarter of the federal expenditures (up to a maximum of \$25,000,000) on the dam and reservoir. By Mar. 31, 1968, the full amount had been recovered from Saskatchewan.

The federal transfers to the provinces in respect of the conditional grant and shared-cost programs increased from \$75,000,000 in the year ended Mar. 31, 1954, to an estimated \$1,896,000,000 in 1969-70. The increase was attributable largely to the introduction of the hospital insurance and diagnostic services program in 1958, medicare in 1968, increases in the level of assistance, and the integration of welfare programs under the Canada Assistance Plan. In 1969-70, federal contributions to the programs in respect of hospital and diagnostic services and welfare programs integrated with and into the Canada Assistance Plan were estimated at \$919,019,000 and \$480,972,000, respectively.

The increasing number and extent of conditional grant and shared-cost programs has occasioned some provincial criticisms and misgivings. It has been argued that the preponderant occupancy of the direct tax field in the postwar years by the Federal Government

encouraged the growth of such programs, as the provinces were denied the revenues that would have enabled them to provide equivalent programs themselves. At the 1964 Federal-Provincial Conference, the Province of Quebec proposed that a province be given the option to assume full administrative and financial responsibility for certain joint programs upon the Federal Government making available to that province the necessary additional tax room. These proposals were referred to a federal-provincial committee of officials for consideration. As a consequence of their consideration, the Prime Minister of Canada, in a letter to the provincial Premiers dated Aug. 15, 1964, proposed a temporary measure permitting a province for an interim period to assume full financial and administrative responsibility in respect of certain programs pending the development of more permanent arrangements. Parliament approved the necessary legislation—the *Established Programs (Interim Arrangements) Act*—in April 1965. Under the Act, the Government of Canada was authorized to enter into agreements with any province that wished to assume full financial and administrative responsibility for certain programs in return for fiscal compensation. The nature and number of programs were itemized in the schedules to the Act.

Schedule I listed the major conditional grant programs of a continuing nature and Schedule II listed smaller and more transient programs. The Schedule I programs were: (1) hospital insurance; (2) old age assistance, blind persons' allowances, disabled persons' allowances, and the welfare portion of unemployment assistance; (3) the technical and vocational training programs for youths who were not yet members of the labour force; and (4) the health grant program, except those elements that involved research and demonstration. The Schedule II programs were: (1) agricultural lime assistance; (2) the forestry programs; (3) hospital construction grants; (4) campgrounds and picnic areas; and (5) the roads-to-resources program. The Act was subsequently amended to include the Canada Assistance Plan.

If a province wished to avail itself of the provisions of the *Established Programs (Interim Arrangements) Act* in respect of a Schedule I program, it had to enter into a supplemental agreement in which it undertook to assume full responsibility for the administration and financing of the program. The Federal Government undertook to ensure that the province received revenue equivalent to the fiscal burden it assumed. The Federal Government undertook to: (a) abate by a specified percentage the individual income tax on the income of residents of the province; (b) pay associated equalization; and (c) make an operating cost adjustment. The operating cost adjustment payment or recovery was to ensure that a province did not suffer or benefit financially through assuming the financing of the federal share of the former joint program. Because of their smaller size and lack of continuity, the compensation associated with a Schedule II program did not provide for federal tax abatement or associated equalization payments. The compensation for these programs was to be paid directly to the province by the federal Minister of Finance.

The freedom of a province to vary the nature and condition of a program enumerated in the *Established Programs (Interim Arrangements) Act* differed between the Schedule I and Schedule II programs. Under the Act, a supplemental agreement with respect to a Schedule I program could vary the conditions of the original agreement only as to the manner in which Canada would contribute to the program and the manner in which accounts were submitted. A supplemental agreement for a Schedule II program might require the program to be continued as in the original authority or it might allow a province to substitute a provincial program having substantially similar objectives.

The *Established Programs (Interim Arrangements) Act* was designed to provide for an interim period during which a province might assume greater administrative and financial responsibility for the enumerated programs and during which time more permanent arrangements governing joint programs might be devised. The length of the interim period was set out in the Act for each program and varied from Mar. 31, 1967 to Dec. 31, 1970. The tax abatement associated with Schedule I programs was also set out in the Act and varied from 1 p.c. for the health grant program to 14 p.c. for hospital insurance.

<sup>1</sup> Provinces excepted are shown in parentheses.<sup>2</sup> As here used, 50 p.c. may mean the province must contribute 50 p.c. of the cost of the project or must match the federal contribution.<sup>3</sup> F = a maximum limit set to the federal share; P = a maximum limit to the provincial share; and O = federal and provincial shares are open-ended.<sup>4</sup> Source: *Public Accounts of Canada, 1970*.<sup>5</sup> Represents the provincial and/or municipal share.<sup>6</sup> Recovery.<sup>7</sup> Not uniform.<sup>8</sup> Provinces to provide administration, services, facilities, land, loans or to undertake a specific portion of the project, etc.<sup>9</sup> Quebec under the Established Programs (Interim Arrangements) Act received \$6,794,000 for these programs.<sup>10</sup> Provinces to maintain existing level of expenditures or to bear residuary costs.<sup>11</sup> Share for provision of services only.<sup>12</sup> Includes final coal subvention payments totalling \$4,600,000.

The Province of Quebec alone availed itself of the provisions of the above legislation. At the federal-provincial meetings in September and October 1966, the Federal Government offered the provinces revised and more permanent arrangements. The Federal Government proposed to abate, for the period 1967-70, 17 p.c. of the personal income tax in those provinces that would take over the financial responsibility for the hospital insurance, welfare (i.e., Canada Assistance Plan) and health grant programs. To ensure fiscal equity, equalization and operating cost adjustment payments were to be associated with the abatement. As the technical and vocational program was being discontinued in its existing form, the offer did not apply to that program. These proposals were re-offered again at the Nov. 4-5, 1968 meeting of the Ministers of Finance and Provincial Treasurers. Until the future responsibility for the joint programs, hospital insurance, Canada welfare, and health grants is finally agreed upon, the contracting-out arrangement in the Established Programs (Interim Arrangements) Act has been extended by the annual Estimates.

Carter, *Canadian Conditional Grants since World War II* (Canadian Tax Papers No. 54), Toronto, Canadian Tax Foundation, November 1971.

## Section 5.—Provincial Government Finance

Provincial government accounting and reporting practices vary considerably so that adjustments to the provincial *Public Accounts* figures are required in order to produce comparable statistics. For example, financial data relating to specific functions are sometimes excluded from the ordinary or current accounts of certain provinces; and therefore the transactions of special or administrative funds carrying out these functions must be consolidated with the provincial accounts to produce statistics which are comparable to those of the other provinces.

**Revenue and Expenditure.**—Table 20 shows the gross general revenue and expenditure of provincial governments and their funds for the fiscal years ended Mar. 31, 1967-69. Tables 21 and 22 reflect the details by source and function of the gross revenue and expenditure. Table 23 gives details of the amounts transferred by provincial governments to municipalities, school boards and other local government entities.

<sup>1</sup> Includes bonds issued by the Ontario Junior Establishment Loan Corporation, \$11,000,000, and by the Ontario Municipal Improvement Corporation, \$21,000,000.

<sup>2</sup> Includes debts assumed by the province as follows: Metropolitan Boulevard, \$56,251,000; loans of the Quebec Municipal Commission for the settlement of school debts in 1942, \$8,034,000; loans contracted by certain university institutions, \$47,362,000; loans of the Village of Parent, \$337,000; and loan by the Institute of Microbiology and Hygiene of the Université de Montréal, \$5,450,000.

<sup>3</sup> Information re amounts outstanding is not available.

<sup>4</sup> Amount authorized; includes net liability of the province re Ontario Savings Office, \$92,323,000, at Mar. 31, 1968.

<sup>5</sup> Excludes debt of toll district debentures having a par value of \$2,295,000, on sewage disposal and water supply systems debentures having a par value of \$2,163,000 and on principal of mortgage loans under the Elderly Persons Housing Act of \$1,271,000.

<sup>6</sup> Excludes guaranteed interest under the School Borrowing Assistance Act and the School Buildings Assistance Act on principal borrowing of \$7,435,000.

## Section 6.—Local Government Finance

**Local Government Taxation.**—Table 27 shows, for the year 1968, local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of the year. Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, these figures should not be used as a basis for interprovincial comparisons of the relative burden of local government taxation.

27.—Local Government Taxation, by Province, 1968

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. vii of this volume.*

In this Chapter various statistical statements and studies are presented in which broad areas of Canadian economic activity are covered in a comprehensive but summary form. These integrated aggregative economic accounts provide an interrelated framework for economic analysis and the observation of changes in the functioning of the Canadian economy and its structure and in economic and financial relationships with other countries.

## Section 1.—National Income and Expenditure Accounts

The national income and expenditure accounts, which have recently undergone a complete and comprehensive historical revision, constitute a subset of the system of national accounts (also included in this system are the balance of international payments, input-output tables, indexes of real domestic product by industry and financial flow accounts). The national income and expenditure accounts provide accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between major groups of transactors, namely, governments, corporate and government business enterprises, persons and unincorporated businesses and non-residents. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy, which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

The tables on pp. 1176-1181 are based on the historically revised series of the national income and expenditure accounts. The new accounts incorporate major statistical revisions and changes in definitions and structural presentation. A full 1926-66 coverage of the

\* Section 1 was prepared in the National Income and Expenditure Division, Sections 2, 5 and 6 in the Balance of Payments and Financial Flows Division and Sections 3 and 4 in the National Output and Productivity Division of Statistics Canada. Section 7 was prepared by the authorities concerned.

tables for national income and gross national product (Table 2) and for gross national expenditure in current and in constant (1961) dollars (Tables 3 and 4) is available in a Statistics Canada summary report *National Income and Expenditure Accounts, 1926-68*. Definitions are as follows:—

*National Income*.—Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and non-farm unincorporated business.

*Gross National Product*.—Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

*Personal Income*.—Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government (such as family allowances, unemployment insurance benefits and war service gratuities) in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

*Gross National Expenditure*.—Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

### Economic Activity in 1970

The rate of expansion of the Canadian economy slackened somewhat in 1970, although the pace of activity increased in the final quarter of the year. The preliminary estimate of the aggregate value of Canada's production of goods and services in 1970 of \$84,468,000,000 was \$5,908,000,000 larger than for 1969, or an increase of 7.5 p.c. This rate of increase was somewhat lower than those recorded in most recent years, except in 1967 when the economy also experienced some slowing down. The rise in the implicit price deflator for Gross National Product (GNP) of 4.1 p.c., although smaller than the 4.7-p.c. rise in 1969, was still one of the largest annual price increases shown in recent years. However, most of the annual increase was attributable to the momentum of rising prices at the beginning of 1970; in the course of the year there was some deceleration. After allowing for rising prices, the physical volume of production rose by 3.3 p.c., compared with increases of 3.5 p.c. in 1967 and of about 5 p.c. in 1968 and in 1969.

Fiscal and monetary policies adopted in 1969 apparently played some role in slowing down the growth of incomes and domestic demand in the first half of 1970 and at the same time contributed to the moderation of price advance. Some easing of these policies appeared to have had an effect in the recovery of demand in the latter part of the year. The quickened pace of activity in the fourth quarter was noteworthy, especially in view of the fact that it occurred despite a major strike in the automobile industry during most of that period. A remarkable development in 1970 which contributed to the continued growth of the economy was the spectacular gain in exports realized in the first quarter and maintained throughout the remainder of the year.

Prices showed a progressive deceleration as the year progressed. However, despite some indications of moderate productivity gains, there was no comparable evidence of a parallel decrease in cost pressure. The sharp decline in corporation profits reflected these

underlying cost-price relationships as well as certain special factors—in particular, numerous work stoppages and the effect on some export-oriented industries of the appreciation of the Canadian dollar which resulted from the freeing of the exchange rate in the month of June. Employment increases were unusually small and insufficient to absorb the rapid rise in the labour force. As a result, the unemployment rate for the year jumped from 4.7 p.c. to 5.9 p.c., its highest level since 1962.

**Consumer Demand.**—Consumer spending in 1970 continued to be an important element in explaining cyclical changes in aggregate demand. Personal expenditure on consumer goods and services rose by 5.3 p.c. compared with increases of between 8 p.c. and 10 p.c. in the previous few years.

Not unexpectedly, the principal weakness occurred in the purchases of the more expensive durable goods items, where the consumer has the greatest scope for discretionary spending. Outlays on new passenger cars fell by 17 p.c.; a steep decline in this component occurred in the first quarter and, after recovering ground in the following two quarters, spending fell again in the fourth quarter when sales were affected by the automobile strike. (Only outlays on automobiles of North American manufacture were diminished; spending on overseas models rose strongly for the second consecutive year.) Among other durable goods, recreation equipment and home appliances also showed declines, while outlays on furniture, fixtures (such items as lamps and curtains) and floor coverings remained around their 1969 level.

Sluggishness of demand was also evident in the other major categories of consumer spending. The slowdown in semi-durable goods was especially marked in clothing and footwear. In services, the deceleration was due largely to the further extension of the medicare program, which has the effect of shifting most medical expenses from the personal to the government sector. However, services other than medical also showed a deceleration. Outlays on non-durable goods, which were propped up by accelerated rises in electricity and fuel, rose at a rate only slightly lower than in the previous year.

**Fixed Capital Outlays.**—High levels of mortgage interest rates in 1969 and early 1970 had an influence on investment outlays for new housing. Spending on new residential construction fell by 8 p.c. during the year and starts of new residential structures fell abruptly in March 1969 and continued to decrease until May 1970. This was reflected, with the usual time lag, in strongly declining outlays in the latter part of 1969 and the first two quarters of 1970. In response to the easing in mortgage markets starting in mid-year and to the injection of federal mortgage funds for direct lending in low-rental housing, especially in the fourth quarter, starts climbed sharply from July onward. This rebound in starts was reflected in a very sharp 12.7-p.c. advance in outlays in the closing quarter.

Business fixed investment, excluding housing, rose by 8.0 p.c. to a level of \$11,172,000,000. Despite falling profits and sluggish sales in domestic markets, these results (based on preliminary annual survey information) were in line with the expressed intentions declared at the beginning of the year in the survey of business investment. Spending on non-residential construction was up by 10.1 p.c. in 1970 compared with 5.1 p.c. in the previous year. Outlays on machinery and equipment rose at a lesser rate than in 1969—by 6.2 p.c. compared with 11.1 p.c.

**Inventory Investment.**—The bulk of the sharp decline in inventory investment in 1970 was attributable to the farm component, which swung from an accumulation of \$503,000,000 to a decumulation of \$178,000,000. The farm inventory movement reflected a sharp reduction in the value of the new crop, partly in response to the government Lower Inventory for Tomorrow (LIFT) program; it also reflected considerable decline in grain stocks in commercial channels, coinciding with rising grain exports.

Investment in non-farm business inventories also declined somewhat. This was due largely to sharp depletions in the fourth quarter, especially in the stocks of motor

vehicle dealers which were drawn down as a result of the automobile strike. For the year as a whole, the stock-to-shipments ratio in manufacturing industries and stock-to-sales ratios in both retail and wholesale trade were higher than in 1969.

**Exports and Imports.**—Strong foreign demand for Canadian goods and services in 1970 provided by far the greatest stimulus to the economy. The gains were concentrated in the first quarter, when they accounted for almost all of the increase in total demand. Exports were thereafter maintained at only slightly lower levels than in the first quarter, resulting in a gain of 13.5 p.c. for the year as a whole compared with one of 10.5 p.c. in 1969. Increases in merchandise exports were widespread but were particularly notable in metals and cereals. An unusual feature of this expansion was the altered direction of the flow of export gains. Exports to the United States, Canada's largest customer, increased moderately in line with the marked economic slowdown in that country, whereas exports to overseas countries, especially to the European Economic Community, to the United Kingdom and to Japan, rose spectacularly. In sharp contrast with exports, imports of goods and services rose by only 2.0 p.c. These developments in the external sector caused a huge swing of \$2,100,000,000 in the balance of transactions in goods and services with non-residents—from a deficit of \$967,000,000 to a surplus of \$1,136,000,000, the highest surplus ever recorded in Canada.

**Government Current Expenditure on Goods and Services.**—Rising government current expenditure on goods and services was another important sustaining force in 1970, the rise of 15.5 p.c. being the highest since 1966. Almost half of the gain occurred at the provincial level of government, which was up 37 p.c. due largely to increased expenditures under medicare programs. Expenditure of local governments and of hospitals also recorded sizable increases of over 10 p.c. and Federal Government current expenditure on goods and services rose by 5.1 p.c.

**Incomes.**—Wages, salaries and supplementary labour income made a substantial gain of 8.9 p.c. in 1970. Although this increase was smaller than those recorded in recent years (when annual increases generally exceeded 10 p.c.) it was, nevertheless, well ahead of the increase of 7.5 p.c. in GNP. Higher average earnings accounted for most of the increase in labour income. With most of the increase in employment absorbed by service-producing industries, there was an accentuation of the tendency toward larger increases in this group than in goods-producing industries.

The deceleration in the rate of increase of wages and salaries in the goods-producing industries was due entirely to slow growth in strike-affected manufacturing, where the rate of increase was about half that in 1969—5.6 p.c. compared with 10.7 p.c. Construction, which also experienced labour disputes, showed an increase similar to that shown in 1969. A sharp acceleration in mining, from 4.4 p.c. to 17.5 p.c., reflected an increase in production following strikes in 1969. In the service-producing industries, although all groups showed smaller rises in labour income, the deceleration was most evident in public administration.

Preliminary estimates of corporation profits before taxes indicated a decline of 6.2 p.c. for 1970, the first annual decline since 1967 when profits fell by 2.0 p.c. After falling in mid-1969, profits moved somewhat erratically along an apparently flat trend line from the third quarter of 1969 until the third quarter of 1970, then plunged by 11.7 p.c. in the strike-affected fourth quarter. The year's rise of 9.3 p.c. in capital consumption allowances cushioned the fall in gross profits (which include these provisions for depreciation); gross profits declined by a moderate 0.9 p.c.

Other income components either fell or rose at slower rates than in 1969. Accrued net farm income fell by almost 20 p.c., due mainly to the smaller crop. (Swings of this magnitude are not uncommon in this series.) Net income of non-farm unincorporated business, including rent, rose by 3.2 p.c. compared with 4.6 p.c. in 1969; interest and miscellaneous investment income was up by 13.4 p.c. after an unusually large 24-p.c. increase in 1969.

Personal disposable income (personal income after tax and other deductions) rose by 6 p.c., a slower pace than in any year since 1961. However, because personal expenditure on goods and services was even more sluggish, the personal saving ratio (personal saving as a proportion of personal disposable income) increased in 1970.

**Price Movements.**—For the year 1970 as a whole, the implicit price index for gross national expenditure rose by 4.1 p.c. compared with a 4.7-p.c. rise in 1969. While conceptually different, base-weighted price indexes such as the Consumer Price Index, the Industry Selling Price Indexes and the General Wholesale Price Index also showed price moderation. The price indexes for most major categories of final expenditure recorded lower increases than in 1969. Within 1970, the over-all implicit price index showed a deceleration, mainly as a result of the moderation from the second quarter onward, of the rise in the implicit price index for personal expenditure on goods and of that for exports.

The implicit price index for exports rose by 3.3 p.c. in 1970. The increase was concentrated in the first quarter, which showed an unusually strong 2.1-p.c. rise; export prices rose very little in the rest of the year. The effect on export prices of the freeing of the exchange rate in June 1970 was not clear. It would appear that for many export commodities where prices are determined in world markets or contractually fixed in United States dollars it caused a lowering of the Canadian prices. The impact of the appreciation of the Canadian dollar on import prices was, as expected, to slow their rate of increase.

The implicit price index for total personal expenditure rose by 3.2 p.c., a deceleration from the increases of about 4.0 p.c. recorded in each of the previous two years. All components except durables showed price deceleration. A marked easing in the price of rents explained the slowdown in services, as most other indexes in the services group continued to rise strongly. The softening in the non-durables price index was due to declining food prices, one of the more striking developments of the year, and was related to depressed markets for certain agricultural products, to lower prices of food imports and, in the latter part of the year, to intense competition among large retail chain stores. The rise in durable goods prices was centred on the first quarter.

The increase of 3.0 p.c. shown by the implicit price index for business gross fixed capital formation was notably lower than the 4.3 p.c. shown in 1969, the deceleration occurring in construction prices. The implicit price index for residential construction rose by 3.3 p.c. and that for non-residential construction by 4.2 p.c., compared with increases in 1969 of 5.3 p.c. and 6.3 p.c., respectively. The rise in the price of residential construction was due entirely to increased price of the labour component; in non-residential construction the prices of both labour and materials contributed to the increase. The price for machinery and equipment rose at 2.5 p.c., the same rate as in 1969.

**The Government Sector.**—Total revenues of all levels of government combined (excluding intergovernmental transfers) rose by just over 9 p.c. in 1970 from the level of the previous year, the smallest annual increase in several years. All categories, with the exception of corporate direct taxes, increased. More than half of the increase was accounted for by a 15-p.c. gain in revenue from personal direct taxes, the larger part of which took place at the federal level. Revenue from indirect taxes rose by over \$650,000,000 with the gain concentrated at the provincial and local government levels, due mainly to higher returns from retail sales, gasoline and property taxes; federal indirect taxes were virtually unchanged. The investment income of governments also rose during 1970 and was attributed mainly to higher interest receipts.

Total expenditures of all levels of government rose more than revenues, by over 13.5 p.c., with about two thirds of the increase due to higher outlays on goods and services. A significant part of this increase in goods and services took place at the provincial level, where a major factor was the medicare program which reflected a full year's operation in some provinces and its introduction during the year in other provinces. Transfer payments to persons rose by \$744,000,000 in 1970. At the federal level, the gain was due to higher

old age security pensions and unemployment insurance benefits, while at the provincial level there were higher transfers to post-secondary educational institutions and to benevolent associations.

With revenues rising less sharply than expenditures, the surplus of the government sector, on a national accounts basis, declined from \$2,208,000,000 in 1969 to \$1,278,000,000 in 1970. The Federal Government moved from a surplus of \$773,000,000 in 1969 to a deficit of \$12,000,000 in 1970 and the provincial government sector also moved to a deficit position. Local governments recorded a small surplus in 1970 and the surplus of the Canada and Quebec Pension Plans rose.

## Section 2.—Financial Flow Accounts

The financial flow accounts, introduced in 1969, provide a detailed exposition of financial activity in the Canadian economy within an integrated macro-economic accounting system. Financial transactions of the various sectors of the economy are brought into explicit statistical relationship with one another while the structure of the system provides a direct linking of financial data to production statistics in each sector of the economy. The presentation of financial statistics for the whole economy allows developments in any sector to be viewed in relation to other sectors or in relation to the entire economy. The simultaneous linking of financial and production statistics provides a statistical framework appropriate to investigation of the interrelationships of financial markets and markets for goods and services. The presentation of financial and production statistics within the framework of a balancing set of accounts has the additional benefit of exposing gaps in statistical coverage and providing a quality check on existing statistics.

The financial flow accounts focus on the sectors of the economy associated with the income and expenditure accounts (i.e., personal, business, government and foreign sectors) but provide a considerably more detailed articulation. The system describes 41 sectors and subsectors, more than half of which are devoted to the various types of financial institutions. Sector financial transactions are described in terms of 50 categories of financial assets and liabilities such as loans, bonds and mortgages. The balancing and internal consistency of the system is based on two important identity relationships. First, for the total economy, saving and investment are equal and changes in financial assets are equal to changes in financial liabilities. Secondly, in every sector, the excess of investment over saving or vice versa must be matched by offsetting changes in financial assets and/or financial liabilities. The first relationship ensures a balanced system while the second relationship ensures internal consistency.

Basically, what the accounts do is show the saving available from current revenue less current expenditure for each sector; non-financial capital formation undertaken by the sector is charged against the saving, leaving the net lending or borrowing requirements of each sector; the means by which funds flow between borrowing and lending sectors are shown by the presentation of net changes in the liabilities and assets of each sector. These changes are frequently referred to as the source and use of funds respectively. The system reveals the important role of financial institutions in providing the link between borrowers and lenders by accepting deposits, for example, which may be highly liquid and yield low interest rates to the depositor. These funds deposited with a financial institution are in turn re-loaned in the form of loans with quite different liquidity and yield characteristics.

A summary matrix of the financial flow system is presented in Table 12. More detailed quarterly data for individual sectors and summary matrices are available.

The economy entered 1970 under the most stringent financial circumstances of the postwar experience. Interest rates had reached record levels, chartered bank liquidity was severely depressed and a tight monetary policy, introduced the previous spring, was still in effect. During the spring quarter, economic events and policy changes promoted an easing of credit conditions which continued beyond the year-end. Interaction between foreign and domestic economic forces influenced to an important degree the timing and magnitude of domestic credit easing.

The general easing of credit conditions in 1970 was reflected in a substantial increase of new funds supplied to the economy. Easier monetary policy and increased personal saving saw a sharply higher level of funds supplied to the economy by the chartered banks and the personal sector. Financial institutions other than banks contributed less to credit expansion in 1970 than in the previous year, primarily because of reduced demand for short-term borrowing from these institutions.

The demand for funds shifted sharply toward longer-term financing instruments in response to corporations' liquidity requirements and Federal Government cash needs. Bonds and claims on associated enterprises were the primary sources of expanded long-term financing in 1970. Demand for short-term financing, on the other hand, was reduced decisively. Largely in response to weak demand by corporations and consumers, new funds demanded via loans, short-term commercial paper and consumer credit amounted to only \$1,000,000,000 compared to \$4,200,000,000 in the previous year.

Policies of restraint directed toward the inflation problem placed increasing pressures on corporate liquidity during the latter 1960s. The severity of the corporate liquidity squeeze was underlined by the Penn Central collapse of June 1970. As credit conditions improved in 1970, corporations in Canada and the United States placed increasing demands on long-term credit markets to the virtual exclusion of short-term borrowing. Large net bond issues replaced bank loans as the major source of external funds. Bank loans to corporations increased only marginally in 1970 and notable retirements took place in the latter part of the year. This large shift in corporate financing from short- to long-term instruments was a prime factor influencing the atypical yield spreads that developed during the year. In addition, the slow growth of consumer goods expenditure, particularly durables, reduced the demand for short-term funds to finance consumer credit.

Canadian short-term interest rates fell precipitously during 1970 while long-term rates changed little until late in the year. Broadly similar interest-rate developments also occurred in the United States and Europe. An exceptional spread between long- and short-term interest rates developed during the year. The average spread between long-term Government of Canada bonds and treasury bills increased from 0.7 p.c. in the first quarter to 2.9 p.c. in the fourth quarter. A long-to-short-term-rate spread of similar magnitude and timing developed in the United States. A marked preference for long-term financing by corporations and a sluggish demand for consumer credit were probably the more important factors influencing very wide yield spreads in North America.

The easing of credit conditions that commenced in the spring of 1970 was associated with a sharp and sustained acceleration in the rate of growth of monetary aggregates. During the 12-month period up to March 1970, the money supply had increased only marginally. In the following 12-month period up to March 1971, the broadly defined money supply registered an advance of 14.6 p.c.

A sharply increased flow of funds into the banking system during 1970 was accompanied by a restructuring of asset holdings in favour of more liquid assets. Deposit inflows increased by \$3,000,000,000, nearly three times the modest 1969 advance. Government of Canada bond and treasury bill holdings were increased by \$1,500,000,000 compared with a \$500,000,000 redemption in 1969. On the other hand, bank loans (excluding consumer credit) increased by only \$200,000,000 compared to a \$1,400,000,000 advance in 1969.

The very small increase in 1970 bank loans was in large measure a reflection of the preference of corporations for longer-term financing. Continued large extensions of consumer credit were made by chartered banks while other lending institutions experienced net redemptions of consumer loans. As the availability of chartered bank funds increased during the year, it appears that consumers were able to avail themselves of the generally more favourable consumer credit rates offered by the banks.

Corporation financing had a pervasive influence on capital markets in 1970, reflected in part by an exceptionally large spread between long- and short-term interest rates. A dramatic shift from long- to short-term financing dominated the picture. The term structure rather than the level of corporate demands was the decisive factor. Net borrowing requirements actually declined slightly in 1970. Demands in respect of non-financial capital acquisition were almost unchanged while gross domestic saving increased slightly.

The liquidity position of corporations, which had been severely squeezed in 1969, was substantially improved in 1970. A small increase in short-term obligations was more than offset by increased short-term asset holdings. On the other hand, net long-term funding amounted to \$1,600,000,000, of which bond financing was the major source of funds.

Federal Government borrowing increased sharply in 1970, particularly during the latter part of the year. Cash requirements in respect of the exchange fund account presented the dominant financing requirement. In addition, the fiscal impact of slow economic growth and more expansionary expenditure and transfer outlays added to borrowing requirements. Government of Canada bond and treasury bill financing increased from \$600,000,000 to \$1,900,000,000 between 1969 and 1970. Provincial and municipal government borrowing was almost unchanged in 1969 and 1970 at \$1,900,000,000.

Federal Government borrowing has a pervasive impact on domestic bond and short-term financial markets. As a proportion of total bond market financing, Federal Government participation increased from 14.2 p.c. to 23.7 p.c. Federal Government treasury bill issues dominated short-term borrowing activity which was sharply reduced in 1970.

The current account recorded an increasing surplus in each of the four quarters of 1970 which cumulated to an exceptional \$1,300,000,000 favourable balance. The wide movement of the current account balance, from a deficit of \$800,000,000 in 1969 to a surplus of \$1,300,000,000 in 1970, created a need for substantial adjustments to capital flows. A small reduction of the traditional surplus on capital account was only partially compensating and large inflows of foreign exchange resulted, particularly in the first half of the year. Official holdings of international reserves rose by \$1,700,000,000, of which \$1,300,000,000 was accumulated in the first half of the year. Official actions from mid-year, including a temporary unpegging of the Canadian dollar and requests to limit foreign borrowings, acted to reduce capital inflows.

### Section 3.—Domestic Product by Industry

#### Indexes of Real Domestic Product\*

Statistics Canada has since the early 1960s released a set of production data pertaining to the entire spectrum of Canadian industries in its industry detail. These data, in the form of volume of production indexes, are measures of value added for each industry expressed in the dollars of a base year. Technically, they are termed "indexes of real domestic product (RDP) at factor cost originating by industry". The value added, or RDP, volume indexes can be regarded as an extension of the index of industrial production to encompass the remainder of the economy. Concepts and basic methods used to construct both indexes are the same. Thus, industry production index coverage has been extended from mining, manufacturing and electric power and gas utilities, for which volume indexes have been published since the 1920s, to include all other major industrial divisions. The RDP indexes can also be regarded as an elaboration of the supply side of the national income and expenditure accounts.

When measuring the output of a single product such as steel, it is normal to think in terms of tons of steel when the question of quantity arises. When measuring the combined production of steel and natural gas, there is an obvious need for a common denominator and it is appropriate to use the average unit prices of a certain time period (chosen as the base) to value the quantities produced before adding them together. The resultant gross quantity, volume or output measure can be subsequently left in its constant or base period dollar form or it can be expressed in index number form. The latter is accomplished by dividing the constant dollar aggregate of the current period by the dollar aggregate for the base period and multiplying by 100. In constructing a quantity index for a combination of industries where the output of one industry becomes the input of another, the portion double-counted must be eliminated. This is accomplished by revaluing both intermediate input (materials, fuel, advertising, etc.) and gross output in terms of the dollars of a common base year and subtracting the constant dollar value of the former from the latter to yield a constant dollar value added aggregate. This aggregate is the quantity or volume measure represented by the indexes presented herein.

The annual indexes are well suited for studies of production trends, growth rates and inter-industry comparisons, but monthly indexes provide a much better tool for the study of the cyclical behaviour of industries, short-term changes in production and, in fact, for most types of current analysis. Statistics computed for less than annual intervals, however, are frequently subject to strong seasonal influences, and variations in the number of working days during a month may cause differences in the levels of output between two months that otherwise would not exist. Accordingly, the sub-annual real output indexes have been adjusted for both seasonal and calendar variation.

**Real Domestic Product: Recent Performance.**—Spurred by strong domestic and foreign demand throughout most of the decade since 1961 for the goods and services produced by Canadian industries, total real output in the 1961-70 period achieved an average annual rate of gain of 5.6 p.c., in contrast to the average rate of growth of 4.7 p.c. in the 1946-61 period. Domestic demand has been influenced by demographic factors operating in the post World War II years; younger age groups are displaying both their purchasing power and changing tastes. Buoyant foreign demand for Canadian commodities has been a dominant force since 1961, with sales of wheat and motor vehicles and parts having recorded the most dramatic gains over the past ten years. Within this period, a generally healthy investment climate has prevailed. Both residential and non-residential construction made good gains, particularly up to 1966. Government current expenditures on goods

\* *Indexes of Real Domestic Product by Industry, 1961-1969, 1961=100*, Statistics Canada Occasional Paper (Catalogue No. 61-510), for 1961-1967. For the period 1935-60, see *Indexes of Real Domestic Product by Industry, 1961 Base* (Catalogue No. 61-506). For a detailed explanation of concepts, methods and limitations, see *Indexes of Real Domestic Product by Industry of Origin, 1935-61* (Catalogue No. 61-505) and *Revised Index of Industrial Production, 1935-57* (Catalogue No. 61-502). Current data on annual, quarterly and monthly bases are published in Statistics Canada monthly *Indexes of Real Domestic Product by Industry (Including the Index of Industrial Production)* (Catalogue No. 61-005).

and services have also expanded substantially. The durable manufacturing sector was particularly dynamic in response to both domestic and external demands.

The influx of the postwar generation is also reflected in the rapid increase in the labour force. Over most of the period, the expanding economy generated sufficient employment opportunities to adequately absorb the increases in the labour force. Some slackness in the over-all economy developed in the latter part of the 1960s, with the result that, among other things, the growth in labour force employment has tended to fall below the rate of increase in the labour force itself.

The deceleration of the growth of the economy continued in 1970, as shown in Table 13.

**13.—Annual Growth Rates of Real Domestic Product, by Industry, 1961-70**

<b>Real Domestic Product.....</b>	<b>5.6</b>	<b>4.5</b>	<b>2.4</b>

<sup>1</sup> Based on the least squares of logarithms method.

As can be seen from Table 14, manufacturing and, in particular, durables manufacturing, has been a leading contributor to the growth of the Canadian economy over most of the period. The burgeoning motor vehicles and motor-vehicle parts industries have been prime movers behind the rapid increase in the output of durables. A severe interruption in the strong upward trend in motor vehicle production first occurred early in 1966 and persisted until the second quarter of 1967. It has been variously attributed to changes in the general economic condition in North America and specifically to the 1966 credit squeeze and the upward climb of prices plus consumer concern about car safety. Since 1968, production has been hit, directly or indirectly, by strikes and parts shortages and, in 1970, output declined markedly as a result of a slump in consumer spending compounded by the impact of the automobile strike in the latter part of the year.

The performance of the construction industry has been a conspicuous feature of the economy. Heavy injections of industrial capital took place in the mid-1960s to develop additional facilities or expand capacity. Pace-setters were such industries as petroleum and coal products, chemicals, pulp and paper, and electric power. Outlays for social capital such as hospitals and educational institutions also forged ahead. Construction projects commemorating Canada's 1967 Centennial and Expo 67 provided an extra fillip. However, since 1967, tightened monetary conditions, rising costs, a mid-1969 decision to defer capital-cost allowances on commercial projects in some areas, and strikes in both 1969 and 1970, have all restrained output in this sector. Residential construction tends to be one of the more volatile sectors of the economy. The relevant demographic factors have indicated that a solid demand for housing exists. However, less favourable supply conditions such as scarcity of mortgage funds and rising interest rates and construction costs have, from time to time, adversely affected residential construction, particularly in 1966, the latter half of 1969 and most of 1970. The strikes in 1970 exacerbated the situation;

however, increased availability of both private and public mortgage funds in the latter part of the year prompted a sharp upswing, which brought the output by year-end to a level approaching previous peaks.

#### 14.—Contribution to the Percentage Change in Real Domestic Product, by Industry, 1961-70

<sup>1</sup>No data are available prior to 1961 on a 1961 base due to a break in historical continuity resulting from the implementation of the 1960 standard industrial classification and the 1961 weight and reference base for the indexes.

High-voltage transformers and shunt reactors are manufactured at a new internationally financed plant at Varennes, Que. Geared initially to a production of \$12,000,000 a year, it will compete in the rapidly growing North American market for high-voltage power transmission systems and eventually for other electrical products. The plant has access to the testing facilities of Hydro-Quebec's research institute, considered the most advanced on this Continent.

The community, business and personal services group has grown at a fairly steady pace in the past decade, tending to be relatively insensitive to short-term fluctuations, and has thus been one of the sustaining forces in the economy. The rate of increase in output of this industry grouping continued in 1970 to outstrip that of the aggregate output of the economy, paced by such industries as education and services to business management.

### 15.—Quantity Indexes of Real Domestic Product at Factor Cost, by Industry of Origin, 1955-70

(1961=100)

<sup>1</sup>No data are available prior to 1961 on a 1961 base due to a break in historical continuity resulting from the implementation of the 1960 standard industrial classification and the 1961 weight and reference base for the indexes.

A major factor in 1970 which counteracted the weakened domestic demand was a striking gain in exports, led by exports of metals, mineral fuels and grains. This was reinforced by the recovery in industries whose 1969 output had been depressed by labour disputes. The industries benefiting from the combined effect of both factors were mining and transportation, which together accounted for nearly one half of the change in total real output.

The slowdown in the 1970 growth rate of total real domestic product occurred during the first three quarters of the year. The pick-up in activity in the final quarter was highlighted by the resurgence in residential construction which mitigated the impact of the automobile strike.

Total production increased sharply in the first half of 1971. At the aggregate level, there was renewed strength in domestic demand. Exports of significant commodities on a

year-to-year comparison were lower, dampening production in such export-oriented industries as metal mines and pulp and paper. By industry, strength was concentrated in durables manufacturing (reflecting, in part, the rebound in transportation equipment from the strike-depressed level in the fourth quarter), construction and trade. A notable feature of the increase in construction was the first advance in non-residential construction since the beginning of 1970. The main thrust was in trade, shared by both wholesale and retail trade. Within retail trade, there was particularly strong demand for the goods and services of motor vehicle dealers, department and clothing stores.

### Production of Goods-Producing Industries

The data contained in the tables under this heading are published in the Statistics Canada report *Survey of Production*.<sup>\*</sup> The scope of the survey of production is limited to industries engaged chiefly in the production of goods and it measures production in current dollars. This is in contrast to the real domestic product series (p. 1187) which encompasses all industries and measures production in terms of the dollars of a base year.

Tables 16 and 17 give "census value added" production data, classified by province and industry, respectively, on a primary activity basis.<sup>\*</sup> Census value added is derived by deducting the cost of materials from the gross value of production (exclusive of excise and other sales taxes) or revenue. The 1960 standard industrial classification of establishments is the basis of classification in the *Survey of Production*.

<sup>\*</sup> Statistics Canada Catalogue No. 61-202. See Appendix of the 1969 issue for census value added in selected industries on a "total activity" basis.

## Section 4.—Aggregate Productivity Trends

Increasing interest in questions of economic growth, cost-structure and international competitiveness, and in the relationships between output, employment, earnings and prices has focused attention on productivity as a framework within which such problems can usefully be discussed. Recognizing this interest, Statistics Canada now publishes annual indexes of output per person employed and per man-hour in Canada covering the commercial industries as a whole, with separate detail for agriculture and the commercial non-agricultural industries, manufacturing and the residual commercial non-manufacturing industries. Similar indexes are also published for the total and non-agricultural commercial goods-producing industries, and the commercial service-producing industries of the same aggregate.\*

Although these measures relate output to a single input only, namely labour time, they do not measure the exclusive contribution of labour to output. Changes in indexes of output per unit of labour input reflect the combined influence of a number of separate but interrelated factors such as the amount and quality of capital equipment, the extent of utilization of available capacity, managerial efficiency and the impact of technological progress, as well as the skill and effort of the work force.

**Sources of Data.**—The output components of the various indexes of output per unit of labour input referred to here are the historical indexes of “real domestic product (RDP) by industry”, described in Section 3, p. 1187. These indexes, which were developed within the conceptual framework of the national accounts and which measure in constant

\* See Statistics Canada Reference Paper *Indexes of Output per Person Employed and per Man-Hour in Canada, Commercial Non-agricultural Industries, 1947-63* (Catalogue No. 14-501) and *Aggregate Productivity Trends* (Catalogue No. 14-201).

dollar terms the unduplicated contribution of each component industry to total output, are considered basically suitable for productivity measurement when matched with the corresponding input measures.

The major sources for the employment and man-hour indexes were the monthly labour force and employment surveys, and these were supplemented by data from such sources as the annual censuses of manufactures and mining and the decennial census of population. Since the data from these diverse sources varied considerably in their coverage, concepts and methods of compilation, care had to be exercised in their selection, adaptation and combination into aggregate measures of labour input which would be conceptually and statistically consistent, both internally and in relation to the output data. Labour force survey data were used for the paid worker estimates of agriculture and of fishing and trapping, while those for manufacturing and mining were based on adjusted annual census data. Estimates for most of the remaining industry divisions were derived from adjusted employment survey data. Estimates of other than paid workers (own-account workers, employers and unpaid family workers) were derived mainly from the labour force survey. The estimates of average hours worked, which were needed for the indexes of output per man-hour, were also based on labour force survey data, except in the case of manufacturing, where estimates of man-hours paid from the census of manufactures were adjusted to the man-hours worked concept.

**Growth Rates.**—Output per person employed in the commercial non-agricultural industries grew at an average annual rate of 2.7 p.c. between 1946 and 1970. Because of the decline in average hours worked per person, this was a lower rate of growth than that of output per man-hour which, during the same period, increased by 3.3 p.c. per annum. Corresponding figures for manufacturing were 3.7 p.c. and 4.0 p.c. and those for the residual non-manufacturing industries of the commercial non-agricultural sector were 2.3 p.c. and 3.0 p.c., respectively.

In agriculture, the average annual rates of growth of output per person employed and per man-hour between 1946 and 1970 were 5.1 p.c. and 5.4 p.c., respectively. However, in view of the difficulties of measuring the number and especially the man-hours of persons employed in agriculture, data presented for this industry division should be regarded as approximate. In the commercial industries as a whole, output per person employed increased between 1946 and 1970 at an average annual rate of 3.4 p.c., and output per man-hour increased by 4.1 p.c. per annum. Corresponding figures for the total commercial goods-producing industries were 4.9 p.c. and 5.6 p.c., respectively, per annum; for the commercial non-agricultural goods-producing industries, 4.1 p.c. and 4.5 p.c.; and for the commercial service-producing industries, 1.4 p.c. and 2.1 p.c.

**Inter-industry Shift Effects.**—In addition to measuring the changes in productivity within the component industries, the aggregate productivity indexes measure the effect of shifts in employment and production between industries having different levels of productivity. One of the most significant such shifts within the commercial industries of Canada during the postwar years was from agriculture to the non-agricultural industries, where a higher level of output per unit of labour input prevails. The effect of this shift can be measured in various ways and a number of alternative calculations have been carried out for the 1946-65 annual publication,\* all of which confirm, to a greater or lesser extent, that the decline in the relative importance of agriculture made a positive contribution to the total increase in output per person employed in the commercial industries during the postwar period.

\* Statistics Canada Catalogue No. 14-201.

**INDEXES OF OUTPUT PER PERSON EMPLOYED,  
COMMERCIAL INDUSTRIES, 1946-70**

**Section 5.—Canadian Balance of International Payments**

The Canadian Balance of International Payments summarizes transactions between residents of Canada and those of the rest of the world. These statistics form part of the series comprising the "System of National Accounts". Current account transactions, which measure the flow of goods and services between Canada and other countries, are included, with minor adjustments, as a component of Gross National Expenditure. Capital account transactions between residents and non-residents are included in the Financial Flow Accounts (see Sect. 2, pp. 1181-1186).

**Summary of 1970 Transactions.**—In 1970, although exports, especially of merchandise, were one of the most buoyant sectors of the economy throughout the year, economic activity in Canada was relatively subdued. The rate of real growth as measured by the constant dollar value (i.e., in terms of 1961 prices) of the Gross National Product fell to 3.3 p.c. from 5.1 p.c. in 1969. This slack in the domestic economy was reflected in merchandise imports, which in 1970 experienced a marginal decrease of 1.2 p.c. from 1969. Declining imports, coupled with a rapid increase in exports, particularly in the first and fourth quarters of the year, as reflected in the seasonally adjusted data, gave rise to a record trade surplus of \$2,917,000,000. Despite an increased deficit in non-merchandise transactions, the first annual surplus since 1952 was recorded in the current account as it swung from a \$952,000,000 deficit in 1969 to a surplus of \$1,060,000,000 in 1970.

Apart from the general slackness of the economy, special factors affecting patterns of activity in 1970 were: the boost in exports early in the year to catch up on strike-interrupted deliveries in 1969; the floating of the Canadian dollar at the end of May and its subsequent marked appreciation; a gradual easing of monetary policy especially in the last three quarters of the year, which had to take into account not only domestic requirements but also the effects of differential interest rates on the exchange rate and international reserves; a general slackness in the United States economy with some buoyancy elsewhere; and the pervasive effects, especially in the fourth quarter, of the continent-wide strike against General Motors Corporation.

Inflows of capital in long-term forms declined by \$1,367,000,000 to \$738,000,000 as new Canadian issues sold to non-residents fell by \$870,000,000 to \$1,219,000,000. With a gradual easing of monetary conditions in Canada, especially in the latter part of the year, and in response to official requests to limit their issues abroad, Canadian borrowers obtained a far greater proportion of their funded debt requirements domestically in 1970 than in 1969. Other principal factors that may have contributed to the reduced net inflow of long-term capital, apart from the general economic slowdown, were: the most protracted slide in stock prices experienced in recent years on North American exchanges causing investors, including institutions, to re-evaluate their holdings; a narrowing of interest rate differentials, especially with Europe; uncertainty about pending changes in Canadian tax law; and a growing public debate on the role of foreign capital in Canada.

Short-term capital outflows fell by \$820,000,000 to \$268,000,000. The main element in this change was a reduction of \$1,211,000,000 in the outflow to increase Canadian holdings of bank balances and other short-term funds abroad. There were significant inflows as non-residents increased their holdings of Canadian money market instruments. These changes were occasioned mainly by arbitrage movements taking advantage of hedged interest-rate differentials. At times during the year these differentials widened appreciably due principally to a substantial premium which developed for the forward Canadian dollar in the second and third quarters. It should be noted that the category "other short-term capital transactions" includes amounts that have not yet been identified. This errors-and-omissions element of the Canadian balance of international payments during 1970, as currently measured, reflects unidentified net payments of about \$200,000,000.

Canada's net official monetary assets increased by \$1,598,000,000 in 1970. Some \$133,000,000 of this increase was accounted for by Canada's share of the Special Drawing Rights which the International Monetary Fund allocated to participating member countries on Jan. 1, 1970. Apart from this transaction, Canada's international reserves still rose substantially in the first quarter of 1970 and even more sharply in the following two months. With the possibility of reserves rising far in excess of Canada's needs and in order to avoid an immediate problem of financing any further accumulation, the Canadian authorities announced on May 31, 1970 that they would no longer peg the Canadian dollar to within 1 p.c. of its par value of 92½ U.S. cents.

**Current Account Transactions.**—At 12 p.c. the rate of growth of merchandise exports in 1970 was one fifth higher than in 1969. This was achieved despite the rise in

the value of the Canadian dollar following its unpegging at June 1, 1970 and was all the more remarkable since it was accomplished largely as a result of gains in Canadian exports to overseas countries. The value of exports to these countries was over one third higher than in 1969 and provided more than three quarters of the increase in sales. Due partly to greater Canadian penetration in a number of relatively small markets, the share of Canada's exports going to overseas countries increased from 29 p.c. in 1969 to 35 p.c. in 1970. The United States share correspondingly declined to 65 p.c. The over-all growth rate of exports was in line with the 1970 rate of growth of world exports in general and of developed countries in particular.

Among factors that contributed to the commodity exports performance in 1970 was the resumption of a large volume of deliveries of wheat to state trading countries (especially the Soviet Union), coupled with large shipments of barley and rapeseed. Wheat exports were boosted by a reduction in the supply of wheat in world markets due to drought conditions in grain exporting countries such as Australia, Argentina and France and by government-assisted sales to such countries as Peru and the United Arab Republic. Barley exports profited from setbacks in the United States where, as a result of the Southern Corn Blight, there were lower yields. Catch-up requirements of metals following the 1969 strikes in the mining industry in Canada added to the strength in demand for mineral resource products. On the other hand, exports of forest products were adversely affected by lower residential construction activity in the United States, strikes at mills and by tow-boat operators and by the appreciation of the Canadian dollar. Exports of manufactured products were influenced by sluggish demand for durable goods generally and by strikes in the last months of 1970. On a commodity basis, the principal increases in exports occurred in wheat and barley, iron ore, nickel, copper, crude petroleum and natural gas, fertilizers and steel. Exports of motor vehicles, engines and parts decreased by \$25,000,000 from 1969 as compared with an increase of \$845,500,000 from 1968 to 1969.

With imports actually falling below the 1969 total to \$13,833,000,000 and the Gross National Product rising by 7.4 p.c. (in current dollar terms), the upward trend in the ratio of merchandise imports to GNP which, during the previous five years, rose by two percentage points to reach 18 p.c. in 1969, was reversed, dropping to 16 p.c. in 1970. The downturn in imports reflected in part the countervailing influences of lower unit value of imports following the appreciation of the dollar in mid-year, and the stimulative effects which the rise in the value of the Canadian dollar should have provided to purchases from abroad. In addition, there was a general sluggishness in the economy with softness in the domestic retail market, rising unemployment, restrained business spending and a decline in manufacturing activity. These general problems were exacerbated throughout much of the fourth quarter of the year by the continent-wide strike against General Motors. In addition to automobiles, other products showing reductions in imports were excavating and agricultural machinery, communications equipment, lumber, fuel oil, steel and precious metals. Increases in imports were recorded for food and beverages, coal, crude petroleum, inorganic chemicals, metal-working and pulp and paper industries machinery, computers and other office machines and equipment.

In 1970, receipts from non-merchandise transactions, including transfers, rose by 13 p.c. to \$4,855,000,000 while payments increased by 11 p.c. to \$6,712,000,000. The deficit on these transactions increased therefore by about 5 p.c. to \$1,857,000,000. Service receipts at \$4,359,000,000 went up by 14 p.c. while service payments climbed by 11 p.c. to \$6,101,000,000. The deficit on the services, which represented 94 p.c. of the total deficit on invisibles, increased by about 4 p.c. to \$1,759,000,000. Increases from 1969 amounting in total to \$218,000,000 in the deficits on travel, interest and dividends, and business services were offset to the extent of about 70 p.c. by the strengthening in the balances on freight and shipping and miscellaneous income.

The net balance from receipts and payments of interest and dividends reached a deficit of \$997,000,000, increasing by \$82,000,000 over the 1969 net total. Although both income receipts and payments recorded exceptionally large gains in 1970, the increase in the latter,

amounting to \$157,000,000, had nearly twice as strong an impact on the net balance as the rise in receipts of \$75,000,000. By far the most important contributor to this spurt in earnings was that generated from official holdings of foreign exchange.

The deficit on travel continued to increase, rising to \$226,000,000 from \$218,000,000 in the previous year. The largest relative increases for both receipts and payments occurred in travel expenditures vis-à-vis overseas countries. Canadian travel expenditures with these countries rose by 31 p.c. as against an increase of 5 p.c. in travel expenditures with the United States. Receipts from overseas travellers went up by 35 p.c., which was about three times the rate of growth of expenditures of United States residents travelling to Canada. This development in overseas travel reflects in part the increase in Canadian travel expenditures as a result of the 1970 World Exposition in Osaka, Japan, and the upsurge in charter operations to Europe and the Caribbean area which have seen significant growth in recent years and reached record proportions in 1970.

The largest change in the balance on the invisible items took place on freight and shipping. The balance on this account strengthened by \$98,000,000, surging from a deficit of \$61,000,000 to a surplus of \$37,000,000. With the ratio of the receipts and payments to merchandise exports and imports, respectively, remaining practically unchanged, the movement on this account reflected the change in merchandise trade. This was the first time since 1952 that a surplus appeared in this account.

The totals for business services and other transactions for both 1969 and 1970 have been revised to cover additional receipts and payments for a number of services involving the non-corporate sector which, following a preliminary review of this area, appeared to be undercovered. In addition, service receipts for 1969 were revised to include various charges which were deducted as a balance of payments adjustment from merchandise exports. Gold production available for export continued to fall, dropping from \$108,000,000 in 1969 to \$96,000,000 in 1970, the second consecutive annual decline from the \$120,000,000 level reached in 1968.

1969.....	14,832	4,291	14,007	144	5,924	- 952
1970.....	16,750	4,855	13,833	201	6,511	+ 1,060

<sup>1</sup> From 1966, offsetting entries for mutual aid to NATO are excluded.

The deficit on transfers, due largely to an increase of about 40 p.c. in official contributions, increased from \$91,000,000 to \$115,000,000. There was an increase of 17 p.c. in net inflows on account of inheritances and migrants' funds, due largely to higher per capita amounts from a smaller number of immigrants. The net payment balance for personal and institutional remittances decreased marginally. Official contributions went up by 40 p.c. to \$201,000,000, mainly because of increases in the international food aid program and the international assistance account which consists of technical and economic assistance to developing countries. Disbursements under the international food aid program, the bulk of which was wheat, represented about one half of the \$201,000,000 in foreign aid.

<sup>1</sup> Includes all net exports of monetary gold.

**Capital Movements.**—The net movement of capital between Canada and other countries in 1970 produced an inflow of \$470,000,000, a decline of \$547,000,000 from the 1969 level. Inflows of capital in long-term forms declined by \$1,367,000,000 to \$738,000,000 while short-term capital outflows fell by \$820,000,000 to \$268,000,000 in the year under review. The net capital inflow combined with the unprecedented current account surplus of \$1,060,000,000 and the initial allocation of Special Drawing Rights of \$133,000,000 to produce a record increase in net official monetary assets of \$1,663,000,000.

Long-term net capital inflows to Canada have consisted primarily of major flows of direct investment to the Canadian economy together with inflows arising from the placing of new issues in foreign markets. Transactions affecting direct investment in foreign-controlled Canadian enterprises resulted in a net capital inflow of \$310,000,000 in the fourth quarter of 1970 and \$770,000,000 in the year as a whole. The United States continued to be the major contributor of direct investment capital to Canada with net flows representing about 74 p.c. of the total although the level was virtually unchanged from the previous year. A significant development during the year was the sharply increased flows from Continental Europe, well over double the amount recorded in the previous year and representing about one fifth of the current total. Most of the net inflow was channelled into new capital formation and normal working capital requirements; however, over 20 p.c. of the net flows represented special transactions such as the takeover of existing Canadian

enterprises or assets by non-residents and the re-financing of facilities acquired or built in an earlier period. Re-financing was particularly prominent in 1970 and represented over half of the net inflow to the petroleum and natural gas industry.

Portfolio transactions in 1970 gave rise to a net inflow of \$611,000,000, down sharply from the \$1,806,000,000 inflow of 1969. Sales of new Canadian issues abroad of \$1,219,000,000 were the lowest since 1964 and the retirement of Canadian securities at \$483,000,000 the highest since 1966. Trading in outstanding Canadian securities was responsible for net outflows of \$186,000,000, a change of \$241,000,000 from the previous year's inflow. Transactions in foreign securities also contributed to the reduction with an inflow of \$61,000,000 during 1970 compared to \$102,000,000 in 1969. The large-scale inflows of 1969 continued in the first and second quarters of 1970, but then changed abruptly to a net outflow in the third quarter. As the year progressed, trading in outstanding foreign securities swung steadily from a net inflow of \$117,000,000 in the first quarter to a net outflow of \$101,000,000 in the fourth quarter.

Non-military assistance abroad by the Canadian Government consists largely of payments of the regular assessments by the international organizations of which Canada is a member, official contributions, intergovernmental loans, subscriptions to the capital of investment agencies and the extension of export credits. Both assessments and contributions form a part of Canada's payments on current account while other transactions, to the extent that they give rise to claims on non-residents, are mainly reflected in capital movements in long-term forms.

Disbursements on intergovernmental loans extended by Canada in 1970 more than doubled to \$112,000,000 over the previous year. Over 80 p.c. of this outflow went to Commonwealth Asian countries. Disbursements are expected to continue to grow in succeeding years as drawings so far constitute only a small but growing part of aid commitments.

Subscriptions to the capital of international agencies in 1970 amounted to \$32,000,000. This amount, made up of payments to the International Development Association, the Asian Development Bank and the Caribbean Regional Development Bank, was paid in the form of non-negotiable, non-interest-bearing Canadian dollar demand notes for the first two institutions. Changes in the obligations to IDA and ADB are reflected in the short-term capital account covering Government of Canada demand liabilities.

During 1970, Canada received higher repayments of \$36,000,000 in principal on intergovernmental loans extended earlier. The increase of \$14,000,000 over 1969 reflected receipts of about \$9,000,000 and \$5,000,000 from France and the Netherlands, respectively. These were the first principal repayments received from these countries since 1962 when prepayments covering the period up to 1969 were made to bolster Canada's foreign exchange reserves. Of the remainder, \$20,000,000 came from the United Kingdom while \$2,000,000 was paid by Belgium. In addition to the repayments of principal, there were receipts of \$23,000,000 during 1970 on account of interest. These receipts form part of the current account item comprising Canada's receipts of interest and dividends.

Receipts from the United States associated with the Columbia River Treaty amounted to \$31,000,000, representing a further annual maturity of the medium-term non-marketable United States government securities acquired in connection with the Treaty arrangements. Holdings of these securities stood at U.S. \$24,000,000 at the end of 1970.

Transactions arising from the financing of medium- and long-term export credits extended from Canada directly or indirectly at the risk of the Government of Canada resulted in a large net outflow of \$129,000,000. This contrasted with the net outflow in 1969 of only \$12,000,000 and was attributable to a sharp increase in advance of export credits on wheat to Latin American and Middle Eastern countries. Large net advances to

Latin America and to a lesser degree Yugoslavia occurred in commodities other than wheat. Although centrally planned economies other than Yugoslavia accounted for large credit advances for the purchase of wheat, repayments of earlier loans ran slightly higher.

The remaining capital movements in long-term forms, which include bank and other long-term loans, mortgage investments and movements of insurance funds, led to a net outflow of \$157,000,000 compared to a net outflow of \$4,000,000 in 1969. Capital movements in short-term forms in 1970 gave rise to a net outflow of \$268,000,000 compared to \$1,088,000,000 in 1969.

The outflow for the acquisition by Canadians of foreign currency deposits and other short-term funds abroad accounted for \$376,000,000 in 1970 compared to the build-up in 1969 of \$1,587,000,000. A principal factor in the 1970 movement was a rise of \$122,000,000 in the chartered banks' foreign currency net asset position with non-residents.

Transactions in finance company paper in 1970 resulted in net inflows of \$193,000,000. After a net outflow of \$75,000,000 in the first quarter, transactions in finance company paper resulted in substantial net inflows for the rest of the year, particularly in the second quarter in which net inflows mounted to \$174,000,000. Finance company paper, in particular, responded to covered arbitrage movements, in which the differential in interest yields between countries is related to the forward rate of exchange for a country's currency. Movements of short-term paper in the second quarter appear to have been motivated by a considerable premium on the forward Canadian dollar, while a narrowing of interest differentials in the fourth quarter produced a massive inflow through investment in high-quality paper including bankers' acceptances. This type of paper is included with commercial paper, for which gross trading increased more than threefold from the 1969 level and resulted in net inflows of \$52,000,000.

Non-residents, primarily international institutions, reduced their holdings of Government of Canada treasury bills by some \$73,000,000, mostly in the third quarter.

Other short-term capital movements included increases in Canadian dollar deposits by non-residents of \$27,000,000, outflows of \$8,000,000 of Government of Canada demand liabilities consisting of interest-free demand notes issued to international agencies, and outflows produced through reductions in non-resident holdings of miscellaneous finance company obligations and the other short-term capital transactions category. The latter category includes a balancing item of approximately \$200,000,000 representing the difference between direct measurements of the current and capital accounts.

**Official International Monetary Assets and Liabilities.**—Canada's net official monetary assets totalled U.S. \$4,679,000,000 at Dec. 31, 1970, an increase of U.S. \$1,574,000,000 over the year. The large increase in reserves of U.S. \$978,000,000 during the first five months of the year and the monetary problems associated with financing any further substantial accumulation led to the announcement by the Minister of Finance on May 31, 1970 that the Canadian authorities would no longer peg the Canadian dollar to within 1 p.c. of its par value of 92½ U.S. cents. However, even with a floating exchange rate, net reserves registered an additional U.S. \$596,000,000 increase over the remaining seven months. In part, this was due to swaps and forward transactions as the Exchange Fund had acquired by May 31, 1970 U.S. \$360,000,000 for future delivery. These fell due in the remaining months of the year and resulted in an equivalent increase in reserves. In addition, the Exchange Fund undertook transactions for the purpose of moderating movements in the exchange rate, also resulting in some net addition to the reserves.

Holdings in United States dollars increased by a record amount of U.S. \$1,278,000,000 over the year. The largest part of the increase, amounting to U.S. \$782,000,000, occurred before the unpegging of the Canadian dollar in May.

**Section 6.—Canada's International Investment Position\***

Canada's balance of international indebtedness reached a book value of over \$28,000,000,000 by the end of 1969, a sevenfold increase over the past two decades. Long-term foreign investment rose by over \$3,500,000,000, reflecting both an inflow of long-term capital and an increase in earnings accrued to and reinvested by non-residents. Other non-residents' claims on Canadians brought the total of Canada's external liabilities to about \$47,000,000,000. Total outflow of domestic long-term capital together with an increase in earnings accrued to Canadians abroad caused the total book value of Canadian long-term investment abroad to rise to about \$10,500,000,000 at the end of 1969. Due mainly to the large rise in private holdings of foreign exchange, total Canadian assets abroad registered an increase of about \$2,000,000,000, well exceeding \$18,500,000,000 at the end of 1969.

The balance of international indebtedness is a phrase generally accepted in balance-of-payments terminology to include equity investments as well as contractual borrowings.

\* A major new Statistics Canada report *Canada's International Investment Position, 1926 to 1967* (Catalogue No. 67-202) was published in December 1971, bringing together available data on Canada's international investment position and extending and revising material published in *Canada's International Investment Position, 1926-1964* and subsequent releases in Canada's Balance of International Payments reports. The main summary tables contain data from 1926 to 1969, while most of the detail extends only to 1967.

Its size and character have a considerable influence on Canada's balance of payments. This is true not only through the servicing of capital involving interest, dividends and miscellaneous income payments but also through the influence of foreign investment on the Canadian economy and on the shape and direction of its external demands.

Canada has been among the world's largest importers of private long-term capital. The very substantial capital formation which was a feature particularly since the 1950s was associated with an unprecedented growth in the country's external liabilities. These investments contributed to a rapid rate of growth in the Canadian economy, particularly in the exploitation of national resources, and added significantly to Canadian production, employment and income. At the same time they added substantially to the continuing burden of Canada's external debt and to the proportion of Canadian industry controlled by non-residents.

The latest year for which complete data are available is 1967. At the end of that year, Canada's gross external liabilities amounted to \$40,200,000,000; non-resident-owned long-term investments in Canada reached a book value of \$34,700,000,000. The part of these investments in enterprises controlled outside Canada totalled \$20,700,000,000. Investments in other Canadian equities, although smaller, were also substantial and there were periods in recent years of sharp increase in foreign holdings of Canadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth in Canada and to the heavy demands placed on capital markets by this factor and by the financial needs of governments and municipalities. Large development projects have been initiated and financed by investors from other countries and the growth effects from this investment have, in turn, led to Canadian borrowing in capital markets outside Canada. While capital inflows have been the principal source of the increased indebtedness abroad, another substantial contributor has been the earnings from non-resident-controlled branches and subsidiaries which were retained in Canada. New resource industries depending to a large extent on non-resident financing include all branches of the petroleum industry, iron ore, potash and other mining, nickel and pulp and paper. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets totalled \$14,900,000,000 at the end of 1967 and government-owned assets made up a substantial part of that total. Canada's net balance of international indebtedness, including equity investments, at the same date was estimated at \$25,300,000,000.

**Foreign Investments in Canada.**—Dependence upon external sources of capital for financing in periods of heavy investment activity has been characteristic of Canadian development. During the exceptional growth that occurred before World War I, non-resident investment was very high and the main source of that investment was London. However, during the first part of the inter-war period, the United States became the principal source of external capital and by 1926 the portion of Canada's international debt owned in that country exceeded that owned in the United Kingdom. With some interruption during the 1930s, United States investment in Canada continued to increase, particularly after 1947 when the period of intense activity in the petroleum industry got under way. At \$28,030,000,000, United States long-term investments in 1967 represented about 81 p.c. of all non-resident long-term investment in Canada. The main rise occurred in direct investments in companies controlled in the United States.

United Kingdom long-term investments in Canada totalled \$3,576,000,000 at the end of 1967 and accounted for only about 10 p.c. of the total non-resident investments in Canada compared with 36 p.c. at the end of 1939 before most of the wartime repatriations. After reaching a low point in 1948, the value of United Kingdom investments in Canada increased each year to 1962, declined slightly in 1963, partly as a result of Canadian repatriation of investments in railways and further provincial takeover of other utilities, then increased again in subsequent years.

Long-term investments of countries other than the United States and the United Kingdom reached a record total of \$3,096,000,000 at the end of 1967. About two and one half times the 1957 figure, this represented a much higher rate of increase than had occurred in either United States or United Kingdom investments, and large increases had taken place in direct as well as in miscellaneous investments. At about 9 p.c. of the total, compared with 7 p.c. in 1957, this group of countries, mostly in Western Europe, accounted for a slightly larger proportion of total foreign investments than in 1966. Over 85 p.c. of the direct investment, which totalled \$1,547,000,000 in 1967, came from Europe; about one quarter was of Netherlands origin, with French, Belgian, Swiss and German investments making up the next largest groups.

The degree of dependence on non-resident capital for financing Canadian investment has been relatively much less in the postwar period than in the earlier periods of exceptional expansion, even though the rise in non-resident investments has been so great. Thus, from 1950 to 1952 the net use of foreign resources amounted to about one seventh and direct foreign financing to about 34 p.c. of net capital formation in Canada. But from 1959 to 1961, when these ratios had increased considerably to 42 p.c. and 56 p.c., respectively, they were still less than the corresponding ratios in the 1929-to-1930 period when inter-war investment activity was at its highest point. In that shorter period, more than one half of net capital formation was financed from outside of Canada, and in the period of heavy investment before World War I an even larger ratio of investment was financed by external capital. After 1964 these ratios declined somewhat; from 1965 to 1967 the net use of foreign resources comprised 21 p.c. of net capital formation in Canada and direct foreign financing, 40 p.c. In considering these changes it should be noted that for a decade and a half, between 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abroad have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident investments in all spheres of development including those where Canadian sources of financing predominate such as in merchandising, agriculture, housing, public utilities and other forms of social capital. Thus, non-resident financing of manufacturing, petroleum and mining has been much higher than the over-all ratios indicate and has provided the major portion of the capital investment in this field in the period since 1948. The most recent comprehensive calculation of the ratios of non-resident ownership in Canadian manufacturing, mining and petroleum is for the year 1967. In that year the Canadian manufacturing industry was 52-p.c. owned by non-residents but capital subject to foreign control was 57 p.c. These proportions compared with 50 p.c. and 56 p.c., respectively, as recently as the end of 1957. In the field of petroleum and natural gas, non-resident ownership and control amounted to 62 p.c. and 74 p.c., respectively, at the end of 1967, whereas at the end of 1957 non-resident ownership and control had amounted to 63 p.c. and 76 p.c., respectively; in mining and smelting, non-resident ownership and control amounted to 61 p.c. and 65 p.c., respectively, compared with 56 p.c. and 61 p.c. in 1957.

However, resident-owned Canadian capital continued to play a leading role in the financing of such areas of business as merchandising, railways and other public utilities. Hence, non-resident ownership in a broad range of business activity, including manufacturing, petroleum, mining, merchandising and railways and utilities, rose only slightly from 32 p.c. in 1948 to 35 p.c. in 1967. But, in the same years, companies subject to non-resident control increased from 25 p.c. to 35 p.c. their share of the total capital even in this broad area of business, a trend also evident in many subdivisions of the manufacturing and extractive industries.

Another basis of judging the place of foreign-controlled business in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled by non-residents. Enterprises having an investment in Canada of \$1,000,000 or more accounted for about 40 p.c. of Canadian manufacturing production in 1961 and 29 p.c. of employment in that field. About 33 p.c. of Canadian manufacturing production and 22 p.c. of employment originated with United States-controlled plants. These ratios in United States-controlled plants were somewhat higher

*Wings for the McDonnell Douglas DC-10 jetliner on the final assembly line at a Malton, Ont., plant; this is part of the company's current contract for 300 wings valued at about \$500,000,000.*

than in 1953—the previous year for which a study of this kind was made. In some industries the proportions of production and employment in plants controlled by non-residents were much higher than this. Automobiles, for example, are produced mainly in United States-controlled plants, but this is exceptional. Other industries in which well over one half of the production is in non-resident-controlled firms include the smelting and refining of non-ferrous metals, petroleum refining, motor vehicle parts, aircraft and parts, and industrial chemicals. In several major industries like fruit and vegetable canning and preserving, and miscellaneous machinery and equipment manufacturing, the distribution of production between Canadian and foreign-controlled companies is more even. In such industries as pulp, paper and miscellaneous food manufacturing, the non-resident share is large although less than one half of the total.

There are, however, many industries where the largest part of production is in Canadian-controlled plants. Prominent among these are such important branches of industry as iron and steel mills, sawmills, feed manufacturing, clothing, and such divisions of the food and beverage group as bakeries, slaughtering and meat packing, pasteurizing and butter and cheese plants.

**Canadian Assets Abroad.**—Although there has been a great growth in non-resident investment in Canada and in the balance of Canadian indebtedness to other countries, it will be noted that Canadian assets abroad (Tables 24 and 27) have continued to rise in value. These now equal a larger proportion of liabilities abroad than was the case before World War II. As a proportion of Canada's liabilities they rose from about one fifth in 1926 to about two fifths in 1969. This development was accompanied by a change in the structure of Canada's assets. The share of private long-term investment in Canada's assets declined from about seven tenths of the total in 1926 to about one half in 1969. Assets abroad of the Government of Canada which were minor in 1926, accounted for over

a quarter of the total in 1969. In fact, in the period immediately after World War II the Government's proportion of Canada's foreign assets was even higher and in some years accounted for as much as two thirds of the total. Various short-term holdings other than net official monetary assets account for the balance of Canada's foreign assets. Their share of total assets has varied over the years. From about a third of the total in 1926, the proportion became negligible by the end of World War II. In recent years they comprised about a fifth of the total. Long-term assets, both private and government, have tended to be greater than short-term assets over the years.

Canadian long-term investment abroad has increased over elevenfold from \$926,000,000 in 1926 to \$10,356,000,000 in 1969. The bulk of Canadian long-term investment abroad is in private investment, especially direct investment. The remainder is mostly in government loans and advances and subscriptions to international investment agencies.

Geographically, long-term investment in the United States of \$5,285,000,000 made up slightly more than half of Canada's long-term investment abroad in 1969. About three fifths of total private investment was in that country. Outstanding Government of Canada credit provided under authority of the United Kingdom Financial Agreement Act, 1946, as subsequently amended in 1957, was the major element in the \$1,770,000,000 of Canadian assets in the United Kingdom. In the decade of the 1960s the share of direct investment in Canada's assets in the United Kingdom increased to account for over a third of the total. In other Commonwealth countries, direct investment has always been the predominant form of Canada's assets. Although at the end of 1969 direct investment accounted for over four fifths of Canada's assets in these countries, its share was somewhat lower than in most of the previous years due to the expansion of Government of Canada credits made under the new development or "soft" loan program. In the 1960s direct investment emerged as the most important form of Canada's assets in all other countries and accounted for close to two fifths of the total in those countries. Export credits made directly or indirectly at risk of the Government of Canada also continued to be an important element in Canada's assets in all other countries.

Canadian short-term assets consisting of net official monetary assets, other Canadian short-term holdings of exchange and short-term receivables increased more than fourfold since the end of World War II to account for over two fifths of total assets in 1969.

## 24.—Canadian Balance of International Indebtedness, Selected Years, 1926-69

[Billions ('000 millions) of dollars]

NOTE.—Totals are rounded and may not represent the sum of their components.

<sup>1</sup> Includes equity of non-residents in assets abroad of Canadian companies but excludes investment of insurance companies and banks (held mainly against liabilities to non-residents). <sup>2</sup> Negative amounts arise from the application of reserves against government inactive assets and short positions of Canadian financial institutions.

<sup>3</sup> Medium-term non-marketable United States government securities acquired under the Columbia River Treaty arrangements are shown from 1964. <sup>4</sup> Includes deferred interest on the United Kingdom 1946 loan agreement starting from 1956 and amounting to \$101,000,000 in 1969. <sup>5</sup> Includes investment in Newfoundland prior to 1949. <sup>6</sup> Includes investment in Other Commonwealth Countries. <sup>7</sup> New series not strictly comparable with previous years. <sup>8</sup> Includes United Nations bonds from 1962, which amounted to \$5,000,000 in 1969.

## Section 7.—Government Economic Planning Agencies

### Subsection 1.—The Economic Council of Canada

The Economic Council of Canada was established by Act of Parliament assented to on Aug. 2, 1963 (RSC 1970, c. E-1). The Council is an economic advisory body with broad terms of reference. The central feature of its duties is "to advise and recommend . . . how Canada can achieve the highest possible levels of employment and efficient production in order that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to recommend what government policies . . . will best help to realize the potentialities of growth of the economy; to consider means of strengthening and improving Canada's international financial and trade position; . . . to study how national economic policies can best foster the balanced economic development of all areas of Canada; . . .".

In addition, Parliament made provision for the Council to undertake special studies at the request of the Government in areas that fall within the purview of its general terms of reference. The Council has had two such References. In its first Reference, the Government asked the Economic Council to launch an examination into prices, costs, incomes and productivity and their relationship to sustained economic growth. The Council reported to the Government and to the Canadian public on this Reference in its *Third Annual Review*. A second Reference from the Government asked the Council: "In the light of the Government's long-term economic objectives, to study and advise regarding: (a) the interests of the consumer particularly as they relate to the functions of the Department of the Registrar General (now the Department of Consumer and Corporate Affairs); (b) combines, mergers, monopolies and restraint of trade; (c) patents, trade marks, copyrights and registered industrial designs". An interim report under Sect. (a) of this Reference was published in July 1967; an interim report under Sect. (b) was published in the summer of 1969; and a third and final report under Sect. (c) was released in the winter of 1971.

The Council has no operational responsibilities. It does not implement or administer any policies or programs nor does it have the authority to make research grants, although it may make contractual arrangements with persons other than its staff for the purpose of advising and assisting the Council in the performance of its duties.

The Council consists of up to 28 members appointed by the Governor in Council, including a chairman and two directors who serve full time in their professional capacity, and up to 25 members who are selected from industry, labour, finance and commerce, agriculture and other primary industries, and the general public. The chairman and the directors

(one of whom is elected as vice-chairman by the Council) are appointed for seven-year terms. The other members are appointed for three-year terms "after consultation with appropriate representative organizations" and are intended to reflect a very wide diversity of interests from the different private sectors of the economy and different regions of the country, but they sit on the Council as individuals and not as delegates of particular organizations or groups. The Council is therefore a mixed body rather than an expert professional body, although it is served in its deliberations by an expert staff. There are no government members appointed to the Council. Under the Act, the chairman is the chief executive officer of the Council and has supervision over, and direction of, the work and staff of the Council.

The publications policy of the Economic Council is based on two provisions of the Act, one that requires the Council to publish annually a review of the medium- and long-term prospects and problems of the Canadian economy, and a second that empowers the Council to publish, as it sees fit, such studies and reports prepared for its use. These provisions enable the Council to carry out a most vital function, namely, the dissemination of information to the public as a means of stimulating informed appraisal and discussion of economic problems and policies.

The Council's publications\* fall into three broad categories: (1) the Annual Reviews which summarize the results of the Council's studies and present its conclusions and recommendations (seven of which have been issued to date); (2) Staff and Special Studies which provide more detailed statistical, technical and analytical results of the various research projects; and (3) Conference Papers and other reports.

In its *First Annual Review* the Council stated its underlying philosophy of approach in this way:—

We are concerned not with the question of inventing new forms of intervention, but rather with ordering and developing our policies and social programmes in a rational and coherent manner designed to accomplish consistently what the society has declared to be its economic and social goals. For this purpose it is essential to bring to bear the needs of the future on the decisions of today. This applies not only to decisions by governments but also to decisions in the private sector of the economy.

### Canada's Economic Potential

The Canadian economy since the Second World War has encountered at one time or another inflation, higher unemployment, slow rates of economic growth, and even crises in the balance of international payments. This experience serves well to demonstrate that the real problem is not how to achieve one particular economic or social objective, but rather how to attain all of them—consistently—at the same time. This is another way of saying that the various goals are not always compatible with one another; there is always an overriding requirement to reconcile conflicts.

\* The Reviews, like all Council publications, are available from Information Canada, Ottawa. They are: *First Annual Review: Economic Goals for Canada to 1970* (\$2.50, Catalogue No. EC21-1/1964); *Second Annual Review: Towards Sustained and Balanced Economic Growth* (\$2.75, EC21-1/1965); *Third Annual Review: Prices, Productivity and Employment* (\$2.75, EC21-1/1966); *Fourth Annual Review: The Canadian Economy from the 1960's to the 1970's* (\$2.75, EC21-1/1967); *Fifth Annual Review: The Challenge of Growth and Change* (\$2.75, EC21-1/1968); *Sixth Annual Review: Perspective 1975* (\$2.75, EC21-1/1969); *Seventh Annual Review: Patterns of Growth* (\$2.50, EC21-1/1970); and *Eighth Annual Review: Design for Decision-Making* (\$3.00, EC21-1/1971). Each year, the Council assesses the economic performance in relation to medium-term goals. The most recent assessment is contained in *Performance in Perspective: 1971* (\$1.50, EC21-1/1971-1).

Among other Council publications of more general interest are: *Business Cycles in Canada*, by Derek A. White (\$2.25, EC22-1/17); *Some Economic Aspects of Provincial Educational Systems*, by J. Cousin, J. P. Fortin, and C. J. Wenaas (\$2.00, EC22-1/27); *Canadian Growth Revisited, 1950-1967*, by Dorothy Walters (\$1.50, EC22-1/28); *Population, Family, Household and Labour Force Growth to 1980*, by W. M. Illing, Y. Kasahara, F. T. Denton, and M. V. George (\$1.00, EC22-1/19); *Incomes Policies—Some Foreign Experiences and Their Relevance for Canada*, by David C. Smith (\$1.75, EC22-2/4); *Canadian Policies for Rural Adjustment: A Study of the Economic Impact of ARDA, PFRA, and MMRA*, by H. Buckley and E. A. Keys, F. G. Thompson, and M. Heath (\$1.25, EC22-1671); and *An Essay on Some Critical Aspects of the International Corporation*, by J. N. Behrman (available from the Economic Council of Canada). A complete list of Council publications is available from the Secretary, Economic Council of Canada, P.O. Box 527, Ottawa, Ontario. Also available from the Secretary are the Annual Reports of the Chairman, which include the Act establishing the Council and the membership of the Council.

Once there is general public agreement on the broad set of goals to be pursued, the next task is to define them quantitatively in accordance with Canadian circumstances and possibilities. This the Council has done, publishing "targets". These targets are not forecasts or prophecies but are intended to be measures of desirable performance of the economy—that is, concrete aims of public policy. These objectives or targets were first set out by the Council in its *First Annual Review*, were revised and updated in the *Fourth Annual Review*, and again in the *Sixth Annual Review*.

**Full Employment.**—The Council believes that, over the medium-term future, economic policies should be actively directed toward achieving 97 p.c. employment—that is, no more than 3 p.c. of the labour force unemployed. But this is not regarded by the Council as an ultimate or satisfactory goal for all time; as it has stated, "We would hope that with sustained improvement in our economic performance it may eventually become realistic to aim for an even better performance in the level of employment". The Council also emphasized that the target rate is an average annual rate allowing for seasonal variation, and is a national average within which there will be some regional variation. Considering the rapid rate of increase in the numbers of people entering the labour force in Canada—close to 240,000 persons a year, on average, between 1965 and 1975—this goal would mean that the economy would have to grow fast enough to provide 2,400,000 new jobs over that ten-year period.

**A High Rate of Economic Growth.**—In calculating a potential rate of increase in total production (and thus incomes) the Council views economic growth as arising from: (1) increases in the *quantity and quality* of resources (for example, more manpower and capital, and higher levels of education and more efficient equipment); and (2) increases in productivity or in the efficiency with which men and capital are used and combined.

For the period to 1975, the Council has projected an average annual growth of 5.5 p.c. in the *volume* of production of all goods and services (*volume* in the sense that price increases are deducted from the value of production). Approximately two fifths of this gain in output would come from the employment increase, with a slight increase in the average educational level of the labour force. Another one fifth, roughly, would come from increased investment by government and industry. The remaining portion of the growth rate, around one third, would stem from productivity gains. The potential growth rate of 5.5 p.c. a year is high by both historical and international standards. It implies an increase in the total volume of output from \$66,000,000,000 in 1967 to about \$100,000,000,000 by 1975. This would mean an increase in the average standard of living in Canada—that is, total income divided by total population—of approximately one third.

**Reasonable Price Stability.**—In its projections to 1975, the Council assumed that the GNP price index would rise at an average annual rate of 2 p.c. The Council said it would regard this as consistent with the attainment of a satisfactory degree of price and cost stability over the medium-term future, at least under conditions of reasonable price stability abroad, particularly in the United States. Such an average rate of price increase would imply that some demand components—government expenditures, housing and business investment in plant and equipment—would rise at a somewhat faster rate than the total and that the rate of advance in consumer prices and in export and import prices would be somewhat less. The Council added:—

We recognize that the achievement of this degree of price and cost stability will be extraordinarily difficult under conditions of high demand and high employment, as has been amply demonstrated by developments of the past three years. However, we continue to regard it as one of the basic goals towards which Canadians should continue to strive in the conduct of their economic affairs, with particular emphasis on longer-range policies designed to deal with basic structural and regional problems—that is, policies which would facilitate the consistent achievement of both our employment and price goals.

**A Viable Balance of Payments.**—After careful reappraisal in 1967, the Council concluded that the balance-of-payments goal set out in 1964 was appropriately formulated

in terms of a current account deficit (and accompanying net capital inflow) at potential input in 1970 in the order of \$1,500,000,000 to \$2,000,000,000 and that this goal is still relevant.

From the mid-1950s to the end of the 1960s, the current account deficit (and the net capital inflow) declined from close to 5 p.c. of GNP to about 1 p.c. Changes in the merchandise trade balance mainly accounted for the large relative decline in the current account balance; the trade balance shifted from a deficit equivalent to 2 p.c. of GNP in the mid-1950s to a surplus equivalent of about 2 p.c. of GNP by the end of the 1960s. Apart from 1967, the services deficit remained in a range of 2 to 3 p.c. of GNP. Over this period, net inflows of capital in long-term forms decreased significantly in relation to output (from about 4 p.c. of GNP in the mid-1950s to about 2 p.c. in the latter part of the 1960s).

From early 1969 to early 1970, virtually all of the increase in real GNP went into expanded Canadian exports. The floating of the dollar in June 1970 is attributed to Canada's decision that it would not continue to finance a very rapidly increasing volume of exchange reserves at the previous fixed rate of exchange, especially in the light of the possibility of a massive speculative inflow of capital. The huge merchandise trade surplus (about \$1,300,000,000 in the first half of 1970) and a strong capital inflow swiftly drained away the Canadian dollar balances of the Government of Canada that were required for purchasing foreign exchange accumulating in the official reserves. Policies of restraint in Canada tended to slow the growth of imports and thus contributed to the increased trade surplus.

Whether Canada can maintain medium- and longer-term balance-of-payments viability with the Canadian dollar at a level that is close to par with the U.S. dollar is an open question. The exchange rate is, in fact, a very important *price* in Canada's over-all price system, and changes in it tend to have far-reaching consequences for many parts of the economy.

**Equitable Distribution of Rising Incomes.**—This is an extremely complex goal, defying simple formulation. The Council believes that much more information is needed about the distribution of income among individuals, families and various occupational groups. For example, why do some groups receive little benefit from the general rise in incomes and living standards? What elements lie behind the vicious circle of poverty that still traps far too many people? Although some of these problems may range far beyond the field of economics, the Council has said that these difficult matters will have to be understood and faced if appropriate policies are to be devised to achieve the goal of equitable distribution of rising incomes. To date, the Council's work in this area has been concentrated on two aspects of the fifth goal, namely, regional disparities and poverty.

The problem of assuring an appropriate participation on the part of each region in the over-all process of national economic development has long been an elusive goal and a continuing concern of the people of Canada. The Council's analysis showed that over the past four decades there has been relatively little progress toward the achievement of a better balance in this respect. Despite various policies and programs, very wide disparities have continued to exist in average per capita income. Also, there have continued to be wide differences in the extent to which the human and material resources of each region have found opportunities for productive use. Although national prosperity has always tended to have a favourable influence everywhere, rapid national growth has not by itself served to bring about any significant or lasting reduction in these large and stubborn differences.

The emergence of some slack in the late 1960s and the development of more slack in 1970 is again being accompanied, as in earlier similar conditions, by the slower growth of employment and high unemployment rates in the lower-income regions. Employment growth in the Atlantic Provinces has averaged only 4,000 a year over the past three years (total employment in the Atlantic Provinces was 605,000 in 1969). Similarly, in this three-year period, employment growth in Quebec averaged less than 20,000 a year (total employment in Quebec was over 2,130,000 in 1969).

Rates of unemployment have become very high in the Atlantic Provinces, Quebec and British Columbia, in all of which the unemployment rates tend to be relatively high when slack develops in the Canadian economy generally. An unusual feature in the recent pattern of increases in unemployment rates is that the Prairie Provinces, which typically have a rate below that of Ontario, had a higher rate in mid-1970. This was a reflection of special difficulties with wheat and potash marketing and problems in the construction industry. Another unusual feature is the exceptionally high rate of unemployment in British Columbia in mid-1970, reflecting, in part, the effects on the regional economy of increased industrial disputes and perhaps also a stepped-up flow of migration to that province.

Like the objective of improved regional balance, the elimination of poverty is one aspect of the still broader goal of an equitable distribution of rising incomes. Poverty is a relative matter, and generally accepted conceptions of it vary through time and space. Poverty today is not the same as poverty in the Great Depression of the 1930s and poverty today in Canada is not the same as poverty in the underdeveloped countries of Southeast Asia. In order to get a statistical grip on the problem of poverty, the Council agreed to define it as "an insufficient access to certain goods, services, and conditions of life which are available to everyone else and have come to be accepted as basic to a decent, minimum standard of living". Thus stated, the definition begs many questions, most of which could become the subject of a long and inconclusive debate. Rather than engage in such a debate, the Council proceeded directly to a statistical embodiment of the definition sufficiently simple that it could be appreciated and judged by a broad public in relation to personal, everyday, economic experience.

On the basis of information regarding family spending patterns, so-called "poverty lines" were traced for individuals and families of different sizes. A basic assumption for the main set of estimates was that any family or individual spending more than 70 p.c. of total income on food, clothing and shelter was in a low-income situation and likely to be suffering from poverty. These poverty lines were expressed in the *Fifth Review* in terms of 1961 dollars; adjusted to dollars of 1968 purchasing power, they come out at \$1,800 a year for a single person, \$3,000 for a family of two, \$3,600 for a family of three, \$4,200 for a family of four and \$4,800 for a family of five. Obviously, these are conservative cut-offs; living standards at or just above such levels would be modest indeed.

Using income data derived from the 1961 Census, it was possible to analyse some of the characteristics such as the age, sex and education of family heads, size of family, geographical region of residence, and place of residence (metropolitan, other urban or rural) of those falling below the poverty lines. As of 1961, some 916,000 non-farm families plus 416,000 individuals were living below these levels. The total number of persons involved was 4,200,000, including 1,700,000 children under 16 years of age. In all, they accounted for some 27 p.c. of the total non-farm population of Canada in that year.

Statistics cannot adequately describe poverty but, used with care, they are capable of furnishing important clues to types of policies likely to be effective against poverty.

It is evident from the incidence figures that income is more likely to be low when one or more of the following characteristics are present: (1) the head of the family has no formal education beyond elementary school; (2) the family lives in a rural area; (3) the family lives in the Atlantic Provinces; (4) the head of the family is not a member of the labour force; (5) no member of the family worked during the year; (6) the head of the family is 65 years of age or over; (7) the head of the family is a woman. From that list, it is all too easy to form a picture of poverty in Canada that consists of a relatively few stereotyped categories, but a more balanced picture of the total low-income population of Canada is necessary. In view of the following observations, it is therefore vital in framing policy not to be over-influenced by rates of incidence: (1) 62 p.c. of the low-income non-farm families in 1961 lived in urban areas and of this group more than half lived in metropolitan areas; (2) 83 p.c. of low-income non-farm families lived elsewhere than in the Atlantic Provinces—53 p.c. of them lived in Ontario and the Western Provinces; (3) 68 p.c. of the same group of families had heads who were in the labour force for at least part of the year; (4) 76 p.c. of the group

had one or more earners in the family; (5) 77 p.c. of the family heads in the group were under 65 years of age; (6) 87 p.c. of the families in the group were headed by men. It can thus be seen that a set of anti-poverty policies directed toward major groups or geographical areas showing a very high incidence of low incomes would almost certainly fail to deal adequately with poverty.

The Council called for a more concerted and purposeful attack on poverty in Canada. The challenge, in the short run, is to alleviate conditions which today thrust many Canadian families and individuals into involuntary poverty and hold them there. In the long run, the challenge is to prevent the development of these conditions.

### Challenges for the 1970s

There are many economic challenges for Canada in the 1970s. A large number of them arise from questions about how Canadians wish to make use of their growing resources to meet the future aspirations of their society. Another group of challenges are the economic performance challenges which arise in the context of five basic economic and social goals—full employment, a high and sustained rate of economic growth, reasonable price stability, a viable balance-of-payments position, and an equitable distribution of rising incomes. The key requirement for sustained good performance in relation to these goals is that they must be achieved concurrently, even though they are not all complementary and reinforcing.

To attain potential output in 1975, GNP (in constant 1969 dollars) will need to rise at an average annual rate of about  $5\frac{1}{2}$  p.c. from 1969 to 1975. This would imply an increase (in terms of 1969 dollars) of over \$30,000,000,000 to a level of close to \$110,000,000,000 in 1975. Over the last half of the 1970s, the potential growth rate of the Canadian economy would still be high—over 5 p.c. This would imply a further increase in GNP in the latter part of the 1970s of about an equivalent real dollar magnitude, so that potential GNP by 1980 would be roughly of the order of \$140,000,000,000 (in 1969 dollars).

A very large rise in employment will be needed to reach the full-employment potential of the economy by 1975—about 1,300,000 to 1,400,000 more jobs than existed in 1970. Moreover, over the 1975-80 period, about 1,200,000 additional jobs will be required. In other words, at least 2,500,000 net new jobs will be required in Canada over the coming decade.

A new ingredient in the challenges both for adequate job creation and for productivity growth in the 1970s will be the unprecedented flow into the labour markets of high-level manpower from the post-secondary educational systems. The returns from the expansion in education could be substantial during the 1970s but greater attention needs to be directed to the possibilities here, and various adjustments are needed in the private and government sectors of the economy in order to employ effectively and productively the rapidly rising volume of high-level manpower.

No less important in the 1970s will be the challenge of reconciling good performance in price stability with good performance in relation to employment and growth potentials. Full employment and price stability have never been regarded as "either/or" objectives. Rather, the essential challenge is to pursue both of these goals together in a balanced way and in a longer-run time perspective.

The maintenance of a strong international position will also be an important performance challenge for the 1970s. Increased exports and the maintenance of adequate access to external sources of capital are needed in order to finance both the increased imports of goods and services that Canadians will demand and increased Canadian foreign investment and aid. Canada's potential in international trade in the 1970s cannot be achieved unless producers and exporters struggle unrelentingly, with appropriate supporting government policies and programs, to enhance their competitiveness in domestic and world markets. Moreover, they may well have to do so under conditions that may not be as favourable as in the 1960s, when the substantial devaluation of the Canadian dollar was an important factor strengthening the international competitive position of many industries.

The more equitable distribution of rising incomes will undoubtedly come into greater prominence as an economic and social goal in the 1970s. In particular, the challenges of narrowing regional economic disparities and eliminating poverty clearly need, and will claim, increasing emphasis.

### Commercial Policy Issues in the 1970s

Against the background of a substantial reduction in trade barriers since the Second World War, Canada, like other industrial countries, has come to rely more and more on foreign trade to sustain and improve its economic performance. Many factors besides commercial policy have, of course, contributed to Canada's trade growth, including the growth of domestic markets which have provided a stronger base for successful export expansion in various industries. Exports now equal about half the goods of Canada's goods-producing industries, and nearly half the goods supplied to Canadians are imported. Growth of exports and imports facilitates more efficient use of productive resources, permits greater specialization, and helps to reduce costs and to increase real income per capita.

A strong upsurge of Canadian exports in the 1960s was led for the first time by advanced manufactures, and sustained by rising sales of industrial materials. Automotive and other highly manufactured products accounted for about 40 p.c. of the export total in 1969.

In the past, Canadian commercial policy focused strongly on two themes: (1) negotiation of reduced tariff and other barriers to its exports to foreign countries, particularly for resource-based products in which it was considered that Canada had a "natural advantage"; and (2) the maintenance of protection for a considerable range of manufactured products. Only in more recent years, with the advent of the Kennedy Round and the special trade arrangements with the United States, has there been some tendency to focus on free trade opportunities for exports and imports of manufactured products in order to gain the benefits of specialization and large-scale production in the more advanced manufacturing industries.

There are good economic reasons for dissatisfaction with some of the results of Canada's commercial policies—in particular the emergence of a high-cost structure of production for advanced manufactures. Canada's manufacturing industries are often characterized by small-scale—and, more important, by rather specialized—production and by high unit costs, despite their advantages in supplies of basic materials and labour and their access to first-rate technology.

There are four essentially unresolved problems from the 1960s that remain to be tackled internationally: (1) improved arrangements for agricultural trade, particularly wheat, feed grains and beef; (2) the reduction of non-tariff distortions in trade; (3) special trade arrangements for developing countries; and (4) the modification of the preferential tariff system and the resolution of other trade problems that would arise from British entry into the European Economic Community. Beyond these more immediate tasks, there is the more fundamental issue of how Canada will respond to the "new generation" of big industrial markets, big international firms, and the acceleration of technological change. Access to a large market for industrial products will undoubtedly be even more important in the future than it has been in the past.

It is relevant to recall that Canada's position among industrial countries has special features: Canada is one of the few industrial countries without duty-free access to a large market for all its manufactured products; Canada has some special trade arrangements with the United States which provide an integrated market for some manufactured products; and Canadian duties in several trade sectors are sufficiently high for this country to be regarded now as having a relatively high tariff.

In summary, the Council discerns three broad alternative paths along which world commercial policy could develop: (1) a continued, gradual reduction of trade barriers such as occurred between 1947 and 1967; (2) a positive and constructive response by the United

States and the EEC to the issue raised by the creation of a huge trading bloc in Western Europe; and (3) a possible turn toward protectionist trade policies on the part of the United States and/or the EEC.

### Patterns of Growth

One of the Council's principal duties is to advise on how to achieve high, stable, sustained and widely shared growth in the economy. This mandate implies that economic growth, especially productivity growth, provides an essential basis for meeting human needs and aspirations of many kinds—not only those reflected in material living standards but also broader human and social aims in health and education, the reduction of large-scale poverty, and other diverse goals. Since the inception of its work, the Council has devoted considerable effort to the development of improved understanding of the nature and sources of growth and is continuing its work in this field by focusing attention on industrial growth patterns. The present analysis is directed mainly at clarifying the basic elements in growth of labour and capital and the efficiency with which these have been used in major groups of industries over the past two decades.

The focusing of attention on industrial growth patterns is an initial step toward the future development of potential output analysis on an industry basis, taking into account various important interrelationships between industries. Such analysis should provide, by industries, estimates of future growth of output, investment and employment, consistent with potential output for the whole economy.

For present purposes, ten "industry" groups under three broad headings have been chosen: (1) the *primary* industries, with agriculture, forestry and fishing treated as one group; (2) four groups of other *goods-producing* industries—mining, oil and gas, manufacturing, construction and utilities—as a second group; (3) five *service* industries—transportation, storage and communication, trade (wholesale and retail), finance, insurance and real estate, community, business and personal services, and public administration.

The Council calculated trends in annual growth rates of output by industry group for the 1946-67 period. With the exception of the primary group, the over-all growth rates in current dollars for all industries fell into a range of 7 to 10 p.c.; for agriculture, forestry and fishing combined, the growth rate was only about 2 p.c. Also, a rough estimate was made of what portion of the over-all growth rate was due to price increases. The general pattern is that the output of the goods industries grew more rapidly in real terms and had a lower price component; utilities and mining had the highest rates of growth in real output and relatively very small increases in prices; and in the service industries the price advance was generally much more pronounced.

### Components of Growth

The growth analysis of these ten parts of the economy will follow the same approach used in the Council's earlier examinations of over-all economic growth. In this framework, growth is traced to changes over time in three broad groups of elements—labour, capital and factor productivity.

There appears to be an association between the scale of price increases indicated in some industries over the 1946-67 period and the extent to which these industries relied on particular growth elements more than on others. In general, price increases were less pronounced in the industry groups that experienced relatively high rates of growth in factor productivity. Price increases were highest over that period in the construction, trade, public administration, financial, and community, business and personal service industries, and they generally obtained much of their growth over the postwar period with higher labour inputs and relatively little improvement in factor productivity.

In the mining and utilities groups, increases in capital stock accounted for well over half their total growth in the 1946-67 period and both groups had substantial gains in factor productivity and the lowest rates of price increase over that period.

The transportation, storage and communication industry, with a fairly small reliance on capital stock increases for its over-all growth, experienced a situation in which factor productivity accounted for about 60 p.c. of its total gain in average annual real output over the two decades.

### Structural Shifts

The largest part of Canada's labour force is now engaged in the production of services. Since the end of the Second World War, these service industries have increased their share of total Canadian employment from about 40 p.c. to almost 60 p.c. Their proportion of the total value of output, which was approximately 50 p.c. in 1946, now is also approaching 60 p.c.

### Subsection 2.—The Department of Regional Economic Expansion

The Department of Regional Economic Expansion, which is responsible for Federal Government efforts to overcome regional economic disparities, came officially into existence on Apr. 1, 1969. However, the process of forming the new Department began in July 1968 with the bringing together of a number of existing agencies and programs concerned with regional development.

These programs and agencies included the Agricultural and Rural Development Act (ARDA) and the Fund for Rural Economic Development (FRED) from the Department of Forestry and Rural Development; the Area Development Agency (ADA) from the (then) Department of Industry; the Atlantic Development Board (ADB); the Experimental Projects Branch (Canada NewStart Program) from the Department of Manpower and Immigration; and the Prairie Farm Rehabilitation Administration (PFRA) from the Department of Agriculture. The Minister at the same time became responsible for the Cape Breton Development Corporation (DEVCO), and the National Capital Commission (NCC).

The new Department was formally created under the authority of the Department of Regional Economic Expansion Act (RSC 1970, c. R-4), and this legislation also provides the Department with the first of two major new weapons in the fight against regional disparities. This is the authority to prepare and implement, in co-operation with the provincial governments and other federal agencies, development plans and programs designed to meet the special needs of areas where the growth of employment and incomes was lagging behind other parts of Canada. The second major piece of legislation, the Regional Development Incentives Act (RSC 1970, c. R-3), was approved by Parliament in July 1969. This provides a strong and effective program of industrial incentives to encourage manufacturing and processing industries to establish, expand or modernize in "designated" parts of the country where new jobs are badly needed. The original designated regions included all of the Atlantic regions with the exception of Labrador, much of eastern Quebec, and parts of every other province.

The Act was amended in December 1970. The amendments provided for broader and stronger incentives to regional development in the form of loan guarantees for manufacturing and processing facilities and selected new commercial operations such as business offices, warehousing and freight-handling facilities, shopping centres, convention facilities, hotel accommodation, and recreation facilities. The amendment also introduced a special incentive which can be offered for plants brought into production not later than Dec. 31, 1973. The special incentive was made available in the counties of Stormont, Glengarry and Prescott in eastern Ontario and the southwestern portion of Quebec not previously designated. In the Atlantic Provinces this special incentive is available in addition to the regular incentives.

The over-all program provides for incentive grants of up to \$30,000 per job or one half of the capital to be employed in the operation, whichever is less. The amount of incentive offered in an individual case is determined on the basis of an assessment of the various financial and economic implications of each project. Factors analysed include such things as the economic impact of the project on the region concerned and the company's need for

an incentive in order to create a viable operation in the designated region. Experience to date has shown that the incentives available under the program are able to exert a strong pull on industry to undertake new activity in the designated regions. In the period from the introduction of the program in July 1969 to Aug. 31, 1971, 735 applicants accepted offers of incentives. These projects will involve an estimated total investment of \$616,000,000 and create approximately 32,600 new jobs in various parts of the country when they go into production. The total value of the incentives offered in these cases is approximately \$140,000,000.

**"Special Area" Program.**—To make industrial incentives as effective as possible in overcoming regional disparities, there must be centres in the slow-growth regions which are attractive sites for industrial and population growth. These centres must be able to provide the utilities and services that industry requires, as well as a wide variety of social facilities to meet the needs of a growing population. Therefore, one of the major purposes of the Department's "special area" program is to ensure and speed the development of such centres by helping the provincial government to build up the essential municipal services.

Under the program authorized by Part IV of the Government Organization Act, 1969, special areas can be designated by the Federal Government, in co-operation with the province concerned, where it is determined that special action is needed to promote economic expansion and social adjustment. The "special action" involved is a development approach designed, through federal and provincial co-operation, to meet the needs of the area concerned. Therefore, the type of federal action will vary from area to area according to the need.

The first 22 special areas under the program were designated in March 1970 and federal-provincial agreements were signed covering specific infrastructure development projects beginning in 1970 in 18 of these areas. In the four other areas, the main federal assistance will be in the form of incentives to industry. A 23rd special area, St. Scholastique, was designated in February 1971 and infrastructure projects for that area were included in an amended Special Areas Agreement with Quebec.

The agreements commit the Department to provide the various provinces with a total of up to \$375,000,000 in grants and loans over the period up to June 1972, June 1973 or June 1975, depending upon the designated period and funding arrangement for each special area. This is additional to any federal money that may be provided in industrial incentives. The agreements provide for the inclusion of other jointly identified projects up to June 1975 or for the joint preparation of further development plans for areas not already designated up to June 1975. In addition there will be consultation with the provinces regarding the possible designation of further special areas in the future.

**Agriculture and Rural Development Act (ARDA).**—ARDA is a federal-provincial shared-cost program with provisions for rural development and adjustment programs in which all provinces have participated since its introduction in 1962. The program has operated under two separate federal-provincial agreements, the first covering the period to 1965 and the second the 1965-70 period. Five-year ARDA agreements, for the 1970-75 period, were signed with Ontario and British Columbia in May 1970. New agreements for the 1970-75 period have also been signed or are expected with all other provinces except Prince Edward Island, which is covered by a comprehensive rural development plan. New special agreements which emphasize programs for disadvantaged people of Indian and metis ancestry have also been signed with Manitoba and Alberta. A similar agreement is also expected to be signed with Saskatchewan.

**Canada Land Inventory (CLI).**—By Privy Council Order PC 1971-958, May 18, 1971, the Canada Land Inventory and the Geographic Information System were transferred from the Department of Regional Economic Expansion to the Department of the Environment. The effective date of transfer was July 1, 1971.

**Fund for Rural Economic Development (FRED).**—FRED was a federal fund of \$300,000,000, established in 1966 to finance comprehensive federal-provincial development plans in various parts of the country. The FRED legislation was replaced, when the Department of Regional Economic Expansion was established, by the “special area” powers given to the Department. Therefore, no new programs will be initiated under FRED but the five programs already in operation, for terms ranging from five to 15 years, will continue to completion, with financing through the Department’s annual estimates: the northeast and Mactaquac areas of New Brunswick; the Lower St. Lawrence–Gaspé area of Quebec; the interlake area of Manitoba; and the whole of Prince Edward Island.

**Prairie Farm Rehabilitation Administration (PFRA).**—Since its creation in 1935, PFRA has turned 2,500,000 acres of marginal and submarginal land into community pastures, and has been instrumental in the construction of many large irrigation and water-control projects, notably the Bow River and St. Mary irrigation schemes in Alberta, the South Saskatchewan River Project, the Shellmouth Dam and the Portage Diversion Project. At the farm level, PFRA has assisted 100,000 “dugout” projects for irrigation, stock-watering and domestic water supplies. It has also distributed, free of charge, up to 10,000,000 seedlings a year for farm shelterbelts. PFRA continues as an entity within the organization of the Department of Regional Economic Expansion and has been given new responsibility in implementing departmental programs in the Prairie Provinces.

**Canada NewStart Program.**—Part of the function of the Department’s Social and Human Analysis Branch is to serve as the federal arm of “Canada NewStart” by helping to devise, test and apply programs that will motivate and train disadvantaged adults for stable and rewarding employment. Professional staff act as consultants to the six NewStart corporations that have been established in areas of New Brunswick, Nova Scotia, Prince Edward Island, Manitoba, Saskatchewan and Alberta.

**Newfoundland Resettlement Program.**—This is a federal-provincial shared-cost program established to help people in Newfoundland move from areas where economic prospects are poor to other parts of the Island where there are better employment opportunities and public services.

**Atlantic Development Council.**—The Atlantic Development Board ceased to exist with the passage of the Government Organization Act, 1969, but projects begun by it are being continued by the Department. The Board’s former advisory role is carried on by the new 11-member Atlantic Development Council, appointed by the Federal Government in consultation with the governments of the Atlantic Provinces. It advises the Minister of Regional Economic Expansion with regard to plans and programs for economic and social development and their effects on the region.

**Canadian Council on Rural Development (CCRD).**—The function of the CCRD is to advise the Minister of Regional Economic Expansion on rural development policies; it is composed of representatives of private organizations concerned with rural development, who are appointed by the Minister to serve on the Council.

### **Subsection 3.—The Cape Breton Development Corporation**

The Cape Breton Development Corporation was created by an Act of Parliament, assented to on July 7, 1967 (RSC 1970, c. C-13) and came into existence by proclamation on Oct. 1, 1967, as a proprietary Crown corporation. The Corporation was established to promote and assist the financing and development of industry on the Island and to provide employment outside the coal-producing industry to broaden the base of the economy of the Island.

The Corporation has acquired the former interests of the major coal producer in the Sydney coalfield and, in accordance with its approved plan as required by Sect. 17 of the Act, is operating and reorganizing four mines with a view to the rationalization of coal production.

The Act provides for a board of directors, comprised of a chairman, a president and five other directors. Head office is located in Sydney, N.S. The Corporation reports to Parliament through the Minister of Regional Economic Expansion. Its operations are financed by the Government of Canada with some assistance from the Government of Nova Scotia for industrial development projects.

#### **Subsection 4.—Provincial Government Economic Planning Agencies**

In a number of provinces, economic planning agencies have been set up or are in the formative stage. Only those that are currently active are described here. Other sources of information on economic planning are listed in the Directory of Sources of Official Information in Chapter XXVI, under the heading "Economic Planning".

##### **Nova Scotia Voluntary Planning Board**

The Voluntary Planning Board (VPB), formed by an Act of the provincial legislature in 1963, is an autonomous body and represents non-government elements in the community. It was set up to enable the private sector to participate in the provincial planning process on a purely voluntary basis. Its purpose is to assist the government in preparing a development strategy for the province.

During the first years of its existence, it was, in effect, the only economic planning group in the province; it completed its first plan for the economic development of Nova Scotia in 1966. This plan, which set a number of growth targets for the provincial economy and outlined policies for future growth, emanated largely from the private sector and was advisory to the government. The Board, however, was not set up to handle the on-going economic planning for the province. This function has now been assumed by the provincial Department of Development.

The Board's inputs into the provincial development planning process are: (1) policies, strategies, proposals and/or recommendations emanating from segment and sector committees are channelled through the Board to the government; and (2) simultaneously with (1), draft papers prepared by the government are forwarded to the Board for consideration at the sector and segment level. The relationship between government planners and the "grass-roots" are now maintained by nine sector committees and 38 segment committees served by VPB sector secretaries. About 700 people serve under the Board.

##### **Quebec Planning and Development Bureau**

An Act passed by the provincial legislature in June 1968 authorized the establishment of the Quebec Planning Bureau, which was set up in the same year. Under amending legislation of June 9, 1969, this organization became the Quebec Planning and Development Bureau, a corporate body administered by a director-general, who is chairman, and five other members appointed by the Lieutenant-Governor in Council. It is authorized to act as an agent of government in the acquiring or disposing of goods on behalf of the government.

The functions of the Bureau are: to prepare plans, programs and projects for economic and social advancement and for area development, with the object of making the best possible use of the natural and human resources of the province, and in so doing to gather required information from provincial government departments and agencies on their policies, programs, projects and accomplishments; to undertake or commission research, studies, surveys and inventories, the results of which are needed to carry out its functions, and to co-ordinate like activities of other departments and agencies; to make recommendations to the government based on its own research and studies and advise the government

on policies and programs prepared by other departments and agencies; to direct and implement the execution of any plan, program, project or development with which it is charged by the Lieutenant-Governor and to act as liaison between the departments or agencies involved; and to administer the funds made available to be used for the carrying out of its projects.

The Bureau is responsible for administering three main agreements: (1) the Canada-Quebec Co-operation Agreement for Development of the Lower St. Lawrence, Gaspé and Magdalen Islands, covering the period 1971-76, which operates under the FRED program and replaces the 1968 Agreement on Eastern Quebec; additional funds made available at time of revision of the agreement permit a shift in emphasis to development programs; (2) the Canada-Quebec Federal-Provincial Rural Agreement, 1971-75, which operates under the ARDA program, makes funds available to speed up implementation of an integrated resource-development program in the Saguenay-Lac St. Jean and northwestern Quebec areas; and (3) the Canada-Quebec Federal-Provincial Agreement Concerning the Development of Special Areas, which covers development in the Quebec City, Trois-Rivières and Sept Îles-Port Cartier regions as well as in the sub-region of the new Montreal International Airport. (See also p. 1224.)

The Act authorized the establishment of an Interdepartmental Planning and Development Council comprised of all deputy ministers of the Quebec Government which will act as adviser to the Bureau on the conduct of its affairs. The Act also authorized the establishment of a second consultative group, the Quebec Planning and Development Committee, which was set up in 1971. Whereas the Interdepartmental Council is formed from governmental administrative circles, the Committee represents the popular sector and brings together Quebec socio-economic organizations, major specialized councils, regional representatives and special members. These two agencies advise the Bureau on subjects referred to them for consultation; however, the Act stipulates that the Bureau must indicate to the Council how it proposes to carry out its duties as liaison office for the implementation of plans, programs or projects.

A 1,225-foot wharf built at Lévis to serve a new \$80,000,000 oil refinery at St. Romuald, Que. The refinery, the first in the Quebec City region, has a capacity of 100,000 bbl. a day.

### The Ontario Economic Council

The Ontario Economic Council was formed initially by Order in Council on Feb. 1, 1962, and established by An Act to Establish the Ontario Economic Council on May 30, 1968. The Council was conceived as a vehicle whereby representatives of a broad cross-section of knowledgeable persons throughout the province could pool their information and experience regarding social and economic matters, commission research and formulate policy recommendations to the public and private sectors.

Twenty-one Ontario citizens serve as members of the Council, representing a cross-section of the Ontario community including business, finance, labour, agriculture, universities and government. Each member serves without compensation for a term of one, two or three years. The Council meets monthly in Toronto.

Essentially, the Council operates as an advisory body to the Government of Ontario. Some of its findings are reported directly to the government; other reports and recommendations are published and distributed more widely. Recent reports cover the fields of immigration, forestry policy, reform of government, poverty, transfer taxation, land-use planning, municipal reform and urban waste disposal. Also published, annually between 1965-69 and now biennially, is an index of research projects carried on within provincial government agencies and departments and certain industrial companies operating in Ontario.

The Council shares the view of the Government of Ontario that the economy of Ontario is not an entity separate from Canada. For this reason the Council does not undertake separately for Ontario what the Economic Council of Canada has done and is doing for Canada as a whole. Projects are undertaken with the Economic Council of Canada on a co-operative basis and information is exchanged between the two Councils. Another way in which the Ontario Economic Council pursues its responsibilities is through the work of *ad hoc* committees which involve a broad cross-section of the Ontario community.

A small permanent Council staff undertakes direct assignments and superintends the design and administration of projects assigned to others. Close contact with government departments avoids unnecessary duplication of effort. Research facilities, academic personnel and graduate students in Ontario universities have been used for certain projects, which have included the professional services of members of the departments of economics, political science, geography and business administration in provincial universities. From time to time, the Council engages the professional services of private consulting firms.

## PART I.—BANKING AND OTHER COMMERCIAL FINANCE

### Section 1.—Banking

#### Subsection 1.—The Bank of Canada\*

Canada's central bank, the Bank of Canada, began operations on Mar. 11, 1935, under the terms of the Bank of Canada Act of 1934 which charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation", and conferred on it specific powers for discharging this responsibility. Through the exercise of these powers, the Bank broadly determines the combined total of the most common forms of Canadian money held by the community—chartered bank deposits and currency. The 1967 revision of the Bank of Canada Act contained a number of technical amendments designed to assist the Bank in discharging its responsibilities and account is taken of these changes in the following description of the Bank's operations.

The provisions of the Bank of Canada Act enable the central bank to determine the total amount of cash reserves available to the chartered banks as a group and thus to control the rate of expansion of the total assets and deposit liabilities of the banking system

\* Revised (December 1971) by the Department of Banking and Financial Analysis of the Bank of Canada.

as a whole. The Bank Act, which regulates the operation of the chartered banks, requires that each chartered bank maintain a stipulated minimum average amount of cash reserves, calculated as a percentage of its Canadian dollar deposit liabilities, in the form of deposits at the Bank of Canada and holdings of Bank of Canada notes. (The minimum cash reserve requirement, which came into effect under the new legislation beginning Feb. 1, 1968, is 12 p.c. of demand deposits and 4 p.c. of other deposits.) The ability of the chartered banks as a group to expand their total assets and deposit liabilities is therefore limited by the total amount of cash reserves available. An increase in cash reserves will encourage the banks as a group to expand their total assets (which consist chiefly of loans and marketable securities) with a concomitant increase in their deposit liabilities; a decrease in cash reserves will bring about a decline in their total assets and deposit liabilities as they seek to restore their cash reserve ratios.

The chief method by which the Bank of Canada alters the level of cash reserves of the chartered banks over time, and through them the total of chartered bank deposits, is by purchases and sales of government securities. Payment by the central bank for the securities it purchases in the market adds to the cash reserves of the chartered banks as a group and puts them in a position to expand their assets and deposit liabilities. Conversely, payment to the central bank for securities it sells causes a reduction in the cash reserves of the chartered banks and requires them to reduce their holdings of assets and deposit liabilities.

The influence that the Bank of Canada exerts on credit conditions (i.e., on the interest cost and other terms of borrowing in financial markets) stems from its ability to limit the growth of bank credit and of the community's holdings of bank deposits and currency. The growth rate of the banking system is one of the factors exerting an important influence on the level of interest rates and other terms of access to credit prevailing in financial markets generally. Current credit conditions (and expectations about future trends in such conditions) in turn have an influence on business and household decisions to spend or to save. Many other factors also have an important effect on spending decisions, however, and the behaviour of the economy is subject as well to such influences as economic and financial developments abroad; the investment, price and wage policies of business firms in Canada; and the character of public policies at all levels of government with regard to expenditure and taxation. In using the powers at its disposal, the Bank attempts to help bring about credit conditions appropriate to both domestic and external conditions. Its operations must be based, not on any simple mechanical formula, but rather on continuous observation and appraisal of the constantly changing prospects for the economy as reflected in the complex pattern of economic and financial developments.

In a technical sense, the powers that the central bank possesses allow it to exert a strong influence over economic activity but, in practice, the range through which credit conditions can be permitted to vary is necessarily limited. Changes in credit conditions in Canada affect the position of some groups in the economy much more than that of others, and this uneven impact is bound to inhibit the central bank's operations. Furthermore, interest rates in Canada cannot change greatly in relation to those abroad without producing large capital movements which might complicate Canada's international payments position. These considerations suggest that monetary policy must be used in appropriate combination with other public economic policies in order to help achieve national economic goals.

Although the Bank of Canada has the power to determine the rate of growth of the combined total of currency and chartered bank deposits, it has no means of determining how much of this total is held in the form of currency and how much in the form of chartered bank deposits. This depends entirely on the preferences of the public, since bank deposits can be converted freely into notes and coin and back again.

Although the cash reserve system in Canada—which is similar to that in a number of other countries—enables the central bank to determine within broad limits the total amount of chartered bank assets and deposit liabilities, the Bank of Canada leaves the allocation of bank and other forms of credit to the private sector of the economy. Each chartered bank is free to attempt to gain as large a share as possible of the total cash re-

serves available by competing for deposits and to decide what proportion of its funds to invest in particular kinds of securities and in loans to particular types of borrowers. The influence of the central bank—based in essence on its power to expand or contract chartered bank cash reserves through its market purchases or sales of securities—is both indirect and impersonal and is brought to bear on financial conditions generally through the chartered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are contained in the Bank of Canada Act, 1934, revisions in which were made in 1936, 1938, 1954 and 1967, now included in RSC 1970, c. B-2. Some of these powers are outlined below.

The Bank may buy or sell securities issued or guaranteed by Canada or any province, short-term securities issued by Britain, treasury bills or other obligations of the United States and certain types of short-term commercial paper. The Industrial Development Bank Act authorizes the Bank to purchase securities issued by that institution. The Bank may buy or sell gold, silver, nickel and bronze coin, or any other coin, and gold and silver bullion as well as foreign exchange and may accept non-interest-bearing deposits from the Government of Canada, the government of any province, any chartered bank and any bank regulated by the Quebec Savings Bank Act. The Bank may open accounts in other central banks. It may accept deposits from other central banks, the International Monetary Fund, the International Bank for Reconstruction and Development, and any other official international financial organization, and it may pay interest on such deposits. The Bank does not accept deposits from individuals nor does it compete with the chartered banks in the commercial banking field. The Bank acts as the fiscal agent for the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada. The sole right to issue paper money for circulation in Canada is vested in the Bank.

The Bank of Canada may require the chartered banks to maintain, in addition to the legal minimum cash reserve requirement mentioned above, a secondary reserve which the Bank may vary within certain limits. The secondary reserve, which consists of cash reserves in excess of the minimum requirement, treasury bills and day-to-day loans to investment dealers, cannot be more than 6 p.c. of total deposits when first introduced nor can it exceed 12 p.c.; effective December 1971, the required level was 8½ p.c. In the event the Bank wishes to introduce or increase the secondary reserve requirement, one month's notice to the chartered banks is required; the amount of any increase in the requirement cannot exceed 1 p.c. per month. In the case of a lowering of the secondary reserve requirement, however, the percentage change in any one month is not restricted.

The Bank of Canada may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge of certain classes of securities. Loans or advances may be made under certain conditions and for limited periods to the Government of Canada or of any province. The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances; this rate is known as the Bank Rate. From Nov. 1, 1956 until June 24, 1962, the Bank Rate was established weekly at a fixed margin of ¼ of 1 p.c. above the latest weekly average tender rate for 91-day treasury bills. Since June 24, 1962, the Bank Rate has been fixed from time to time as follows:—

<i>Date of Change</i>	<i>Per Cent per Annum</i>	<i>Date of Change</i>	<i>Per Cent per Annum</i>	<i>Date of Change</i>	<i>Per Cent per Annum</i>
June 24, 1962....	6.00	Apr. 7, 1967.....	4.50	June 11, 1969....	7.50
Sept. 7, 1962....	5.50	Sept. 27, 1967....	5.00	July 16, 1969....	8.00
Oct. 12, 1962....	5.00	Nov. 20, 1967....	6.00	May 12, 1969....	7.50
Nov. 13, 1962....	4.00	Jan. 22, 1968....	7.00	June 1, 1970....	7.00
May 6, 1963.....	3.50	Mar. 15, 1968....	7.50	Sept. 1, 1970....	6.50
Aug. 12, 1963....	4.00	July 2, 1968....	7.00	Nov. 12, 1970....	6.00
Nov. 24, 1964....	4.25	July 29, 1968....	6.50	Feb. 15, 1971....	5.75
Dec. 6, 1965....	4.75	Sept. 3, 1968....	6.00	Feb. 24, 1971....	5.25
Nov. 14, 1966....	5.25	Dec. 18, 1968....	6.50	Oct. 25, 1971....	4.75
Jan. 30, 1967....	5.00	Mar. 3, 1969....	7.00		

From June 24, 1962 to Nov. 12, 1970, the Money Market Rate—the rate at which the Bank of Canada is prepared to enter into purchase and resale agreements with money-market dealers—was either  $\frac{1}{4}$  of 1 p.c. above the average rate on 91-day treasury bills at the preceding weekly tender or the Bank Rate, whichever was lower; since Nov. 12, 1970, the minimum rate is the Bank Rate less  $\frac{3}{4}$  of 1 p.c.

The Bank of Canada is not required to maintain gold or foreign exchange reserves against its liabilities.

Prior to the 1967 amendment of the Bank of Canada Act, there existed some uncertainty about the exact relationship between the central bank and the Government. The changes in the Bank of Canada Act in 1967 were designed to clarify this matter. They provide for regular consultation between the Governor of the Bank and the Minister of Finance as well as for a formal procedure whereby, in the event of a disagreement between the Government and the Bank which cannot be resolved, the Government may, after further consultation has taken place, issue a directive to the Bank as to the monetary policy that it is to follow. Any such directive must be in writing, it must be in specific terms, and it must be applicable for a specified period. It must be published immediately in the *Canada Gazette* and tabled in Parliament. The amendment makes it clear that the Government must take the ultimate responsibility for monetary policy and it provides a mechanism for that purpose but the central bank is in no way relieved of its responsibility for monetary policy and its execution.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, two Directors and the Deputy Minister of Finance (who is without a vote); this Committee has the same powers as the Board except that its decisions must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The head office of the Bank is in Ottawa. It has agencies in Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown.

**The Industrial Development Bank.**—The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada and the Deputy Minister of Industry, Trade and Commerce. The authorized capital of the Bank is \$75,000,000 and it may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed ten times the aggregate of the Bank's paid-up capital and Reserve Fund.

The Bank may extend financial assistance to industrial enterprises in Canada which, by definition in the Act, include any industry, trade or other business undertaking of any kind. With respect to such enterprises, the Bank is empowered to lend money or guarantee loans and where an enterprise is a corporation the Bank may also enter into underwriting agreements with regard to any issue of stock, bonds or debentures; acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement; and acquire certificates issued by a trustee to finance the purchase of transportation equipment. The total amount of commitments of the Bank, in the form of loans, guarantees, etc., in excess of \$200,000 each, may not exceed \$200,000,000.

The Bank may accept any form of collateral security against its advances, including realty and chattel mortgages which constitute the usual kind of security taken. The Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of incorporation provides that it should extend credit only when, in the Bank's opinion, credit or other financial resources would not otherwise be available on reasonable terms and conditions. Its lending takes the form of fixed-term capital loans rather than current operating loans. The Bank is specifically prohibited from engaging in the business of deposit banking. It has branch offices in the following cities: St. John's, Halifax, Saint John, Moncton, Rimouski, Quebec, Trois-Rivières, Montreal, Sherbrooke, Ottawa, Toronto, Hamilton, Waterloo, London, Windsor, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Kelowna, Vancouver, Victoria and Prince George.

<sup>1</sup> Includes investments; the change in loans outstanding does not equal the difference between disbursements and repayments because of year-end accounting adjustments.

<sup>2</sup> Includes agreements of sale.

**Subsection 2.—Currency**

**Note Circulation.**—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves. The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

**Coinage.\***—Under the Currency and Exchange Act (RSC 1970, c. C-39), gold coins may be issued in the denomination of twenty dollars (nine tenths fine or millesimal fineness 900); subsidiary coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (five tenths fine or millesimal fineness 500, or pure nickel); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in the event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins issued under the authority of Sect. 4 of the Currency and Exchange Act for the payment of any amount; in the case of silver coins for the payment of an amount up to \$10; nickel coins for payment up to \$5; and bronze coins up to 25 cents.

\* Revised by the Master of the Royal Canadian Mint, Ottawa.

<sup>1</sup> Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944.

**The Royal Canadian Mint.**—The Ottawa Mint, established as a branch of the Royal Mint under the (Imperial) Coinage Act of 1870, was opened on Jan. 2, 1908. On Dec. 1, 1931, it became the Royal Canadian Mint and operated as a branch of the Department of Finance. Under the provisions of the Government Organization Act, 1969, the Mint was established as a Crown (agency) corporation, reporting to Parliament through the Minister of Supply and Services. The latter change was designed to provide for a more industrial type of organization and for flexibility in producing coins of Canada and other countries; buying, selling, melting, assaying and refining gold and precious metals; and producing medals, plaques and other devices. The Mint now operates under RSC 1970, c. R-8.

The Master of the Mint is its chief executive officer and one of a Board of seven Directors appointed by the Governor in Council. The Master of the Mint is appointed to hold office during pleasure, the Chairman of the Board is appointed for a term of four years subject to re-appointment, and the other five Directors for terms of one to three years.

Financial and budgeting arrangements are similar to those of other Crown companies carrying on industrial or commercial operations. Loans are made from the Consolidated Revenue Fund for operating and capital expenses, with the total outstanding at any time limited to \$35,000,000. Provision is made for loans for temporary purposes and a reserve is established against losses. Operations are conducted with the aim of making a small profit.

### Subsection 3.—The Chartered Banks

Canada's commercial banking system consists of nine privately owned banks. Eight have been in operation for many years and one commenced operations in July 1968. At the end of December 1970, these banks operated 6,200 banking offices in Canada and 270 abroad. Canadian chartered banks engage in a very wide range of activities; they accept various types of deposits from the public including accounts payable on demand, both chequing and non-chequing, notice deposits and fixed-term deposits. The banks, in addition to holding a portfolio of securities, make loans under a wide variety of conditions for commercial, industrial, agricultural and consumer purposes. They also deal in foreign exchange, receive and pay out bank notes, provide safekeeping facilities and perform a variety of other services. For the most part, these operations are carried out in Canada by the extensive network of bank branches. The head offices of the banks confine their activities largely to general administration and policy-making functions, the management of the banks' investment portfolio and related matters. A detailed account of the branch banking system in Canada is given in the 1967 Year Book, pp. 1126-1128.

All banks operating in Canada are chartered (i.e., licensed) by Parliament under the terms of the Bank Act. The Act regulates certain internal aspects of bank operations such as the auditing of accounts, the issuing of stock, the setting aside of reserves and similar matters. In addition, the Bank Act regulates the banks' relationship with the public, the Government and the Bank of Canada.

It has been the practice in Canada to revise the Bank Act at approximately ten-year intervals. The most recent revision was enacted by Parliament early in 1967 and came into effect on May 1 of that year. The remainder of this Subsection deals with the principal changes incorporated in the new Bank Act.

Acceptance by the Government of some of the main recommendations of the Royal Commission on Banking and Finance for increased competition and flexibility in the Canadian banking system was reflected in various new Bank Act provisions. These imposed certain restrictions on corporate and other relationships between banks and other financial institutions, while removing certain existing restrictions on the banks' operations which had placed them at some competitive disadvantage in recent years compared with their principal financial competitors.

In the past, various forms of intercorporate financial relationship between chartered banks and other financial enterprises had developed in Canada. In some instances this involved investment by banks in the shares of these enterprises, and vice versa; in others the relationship involved interlocking directorships. These practices are severely restricted under the terms of the 1967 Bank Act, which limits bank ownership of any Canadian corporation to 10 p.c. of the voting shares and also provides that no more than one fifth of the directors of any company may become directors of a bank. In addition, after a two-year period a director of a trust or mortgage loan company which accepts deposits from the public may not be appointed or elected a director of a bank. In order to ensure that competition is not curtailed by agreements among the banks on interest rates to be paid on deposits or charged for loans, the 1967 Bank Act prohibits the making of such agreements (except with the consent of the Minister of Finance). At the same time the provision that was formerly in the Bank Act limiting to 6 p.c. the interest rate which chartered banks could charge on loans was abolished effective Jan. 1, 1968. Under the 1967 Bank Act, the determination of interest rates on loans and deposits is left to market forces.

The 1967 Bank Act also granted the banks new mortgage-lending powers, permitting them to charge current rates of interest on mortgage loans under the National Housing Act, and also, for the first time, to make conventional residential mortgage loans. In the case of conventional residential mortgages, the amount of an individual mortgage cannot exceed 75 p.c. of the appraised value of the property. After 1973 the maximum amount of a bank's assets to be held in the form of conventional residential mortgages must not be more than 10 p.c. of the bank's Canadian dollar deposit liabilities plus debentures. In the interval, the percentage limitation will rise by 1 p.c. each fiscal year; it was 4 p.c. until Oct. 31, 1968 when it rose to 5 p.c. for the subsequent fiscal year and will so continue until the 10-p.c. maximum is reached.

The banks have also been given authority to issue their own debentures with an original term to maturity of at least five years; such securities are not subject to a reserve requirements and rank in priority after deposit liabilities. The amount of debentures that any bank may have outstanding is limited by restricting the increase per annum to 10 p.c. of the paid-up capital and rest fund and an upper limit of one half of the bank's paid-up capital and rest fund.

The amendments to the Bank Act in 1967 contained a number of revisions respecting the ownership of Canadian chartered banks. No individual or associated shareholders may vote more than 10 p.c. of a bank's total shares outstanding and, if more than 25 p.c. of a bank's shares are owned by non-residents, the total outstanding liabilities of the bank may not exceed twenty times its authorized capital stock.

The Bank Act also stipulates the minimum statutory cash reserve requirement that the chartered banks must observe. The minimum amount of Bank of Canada notes and deposits each bank must hold as cash reserves was changed in a series of monthly steps from 8 p.c. of all Canadian dollar deposits under the old Bank Act to 12 p.c. of demand deposits and 4 p.c. of other deposits as of February 1968. In addition, the Bank of Canada was given stand-by powers to require the banks to hold a "secondary reserve" which would consist of cash in excess of their statutory requirements, holdings of treasury bills and day-to-day loans to investment dealers. When initially introduced, this secondary reserve cannot exceed 6 p.c. of a bank's deposit liabilities. Thereafter it may be increased in monthly steps of 1 p.c. to a maximum of 12 p.c. The Bank of Canada may reduce or remove such a secondary reserve at any time. Effective April 1968, the required level was 7 p.c.; effective June 1969, it was increased to 8 p.c. and, effective July 1970, to 9 p.c.; then, effective December 1971, it was reduced to 8.5 p.c.

**Branches of Chartered Banks.**—Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. As a result of amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank—

The Mercantile Bank of Canada—in 1953 brought the total to 11. Since then the amalgamation in 1955 of the Bank of Toronto and the Dominion Bank as The Toronto-Dominion Bank, the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 and the amalgamation of the Canadian Bank of Commerce and the Imperial Bank of Canada as the Canadian Imperial Bank of Commerce on June 1, 1961 reduced this number to eight. The Bank of British Columbia was granted a charter by Parliament in December 1966 and commenced operations in July 1968, increasing the number of chartered banks to nine. The number of branches of chartered banks in each province periodically from 1920 to 1969 is given in Table 8.

### 8.—Branches of Chartered Banks, by Province, as at Dec. 31 for Certain Years 1920-70

NOTE.—Figures include sub-agencies in Canada receiving deposits for the banks employing them; there were 604 such sub-agencies at Dec. 31, 1970.

**12.—Canadian Cash Reserves, 1961-70**

NOTE.—Bank of Canada deposits are averages of the juridical days in the month shown; Bank of Canada notes and Canadian dollar deposits are averages of the four consecutive Wednesdays ending with the second last Wednesday in the previous month. Until June 1967 the required cash reserve ratio was 8 p.c. on both demand and notice deposits. For the next eight months the required minimum monthly average on demand deposits was increased by  $\frac{1}{4}$  of 1 p.c. per month and that on notice deposits was decreased by  $\frac{1}{4}$  of 1 p.c. Since February 1968 the required ratios have been 12 p.c. for demand deposits and 4 p.c. for notice deposits as prescribed under the Bank Act.

(Millions of dollars)

<sup>1</sup> Excluding realized profits and losses on securities held in investment account which are included in the item "Loss experience not included in other operating expenses". <sup>2</sup> Includes provision for losses based on five-year average loss experience which in 1969 amounted to \$29,600,000 or 0.136 p.c. of related loans, and also includes taxes other than income taxes. <sup>3</sup> Before provision for income taxes and appropriations for losses other than those included in "Other operating expenses". <sup>4</sup> General and tax-paid appropriations for losses: net after any transfers out of accumulated appropriations for losses to undivided profits or rest account.

**Cheque Payments.**—Historical data on a monthly basis are available from 1924 on the amount of cheques charged to customer accounts in 35 major clearing house centres. The value of payments rose steadily throughout the country from 1924 to 1929. From 1929 to 1932 the value declined sharply and thereafter fluctuated within rather narrow limits until the outbreak of the Second World War. Since 1939, the total value of cheques cashed in these centres has increased steadily. The value of cheques cashed in 35 clearing centres during 1970 reached a high of \$796,636,953,000, an increase of 11.4 p.c. above the value of \$714,993,156,000 for 1969. All five geographic regions showed increases, with Ontario recording a gain of 15.9 p.c., the Prairie Provinces 9.3 p.c., the Atlantic Provinces 9.2 p.c., Quebec 7.7 p.c. and British Columbia 1.0 p.c. Payments in the two leading centres also reached all-time highs, Toronto advancing 18.5 p.c. and Montreal 6.6 p.c. over 1969.

<sup>1</sup> The cities of Fort William and Port Arthur amalgamated Jan. 1, 1970 to form Thunder Bay; however, to preserve continuity of figures carried in this table, those for the Fort William clearing-house only are included.

<sup>2</sup> Includes New Westminster.

**Subsection 4.—Other Banking Institutions**

In addition to the savings departments of the chartered banks and of trust and loan companies, there are provincial government savings banking institutions in Ontario and Alberta, and the Montreal City and District Savings Bank in the Province of Quebec, established under federal legislation and reporting monthly to the Department of Finance. Co-operative credit unions also encourage savings among low-income classes and extend small loans to their members.

**Province of Ontario Savings Office.**—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of 5 p.c. per annum (as of Mar. 1, 1971), compounded half-yearly, is paid on accounts and deposits are repayable on demand. Total deposits as of Oct. 31, 1971 were \$187,000,000 and the number of depositors was approximately 68,000; 21 branches are in operation throughout the province.

**Province of Alberta Treasury Branches.**—Deposits are accepted at 73 branches and 76 agencies throughout the province. As at Mar. 31, 1971, deposits totalled \$244,139,357, consisting of demand savings, on which cash orders can be drawn and on which interest is paid at 3½ p.c. per annum, \$40,445,843; super savings, permitting personal withdrawals and on which interest is paid at 5 p.c. per annum, \$36,077,779; term deposits, for terms ranging from 30 days to five years, bearing interest at rates comparable with those paid on the open market, \$98,584,330; and current accounts, on which no interest is paid, \$69,031,405. Total loans as at Mar. 31, 1971 were \$133,330,050.

**The Montreal City and District Savings Bank.**—This Bank was founded in 1846 and has operated under a federal charter since 1871. At Oct. 31, 1971, it had a paid-up capital and reserve of \$21,500,000, savings deposits of \$587,707,131 and total liabilities of \$627,462,809. Assets of a like amount included \$191,158,295, consisting of federal, provincial, municipal and other securities.

**Credit Unions.**—The first credit union in Canada was founded in Lévis, Que., in 1900, its purposes being to promote thrift by encouraging saving and to provide loans to members who could not get credit elsewhere or could get it only at high interest rates. For many years growth was slow; in 1911, when the first figures were available, assets amounted to \$2,000,000 and by 1940 they were only \$20,000,000. However, since that time there has been a spectacular increase. Assets of the Quebec credit unions amounted to over \$1,000,000,000 at the end of 1964 and to over \$2,500,000,000 at the end of 1970. In other provinces, credit unions have not attained the same importance as they have in Quebec; the first credit union legislation was passed in Nova Scotia in 1932 followed by legislation in Manitoba and Saskatchewan in 1937 and in Ontario and British Columbia in 1938.

Credit unions are under provincial legislation. Almost all local offices in each province belong to central credit unions operating within the province either directly or through regional unions. There is a considerable difference between Quebec and the other provinces in the asset-holding of credit unions; Quebec unions have a large proportion of their investments in the form of mortgages and government bonds while unions in the other provinces have a greater percentage in loans. Credit unions probably play their most important role in smaller communities where they may function to a large extent as local banks. The number of chartered credit unions in Canada at the end of 1970 was 4,595 which reported a total membership of 5,203,402 and assets of \$4,592,000,000. Quebec, with 2,947,406 members and assets of \$2,543,000,000 accounted for 57 p.c. and 55 p.c., respectively, of total membership and total assets of all credit unions in Canada. Credit unions classified by bond of association on a percentage basis were; occupational 27, residential 61 and associational 12.

Canadian credit unions in the 1961-70 decade have continued the steady growth generally in evidence since credit unions were first organized in Quebec in the early part of the present century. Loans granted by credit unions increased by 17 p.c. in 1970 to reach \$1,781,000,000, being a 213-p.c. increase over the corresponding figure of \$570,000,000 in 1961. Assets at \$4,592,000,000 increased by 204 p.c. and savings at \$4,192,000,000 increased by 202 p.c. in the same comparison. Membership of 5,203,402 represented 24 p.c. of the total population, compared with 2,751,059 and 15 p.c., respectively, in 1961.

There were 20 central credit unions in 1970; these unions act as credit unions for the credit unions, mainly by accepting deposits of surplus funds from them and providing a source of funds for them to borrow when they cannot meet the demand for local loans. Most of the centrals also admit co-operatives as members. Total assets of the centrals increased by 17 p.c. to \$661,000,000 and loans to members increased 7 p.c. to \$468,000,000 over the previous year. The Canadian Co-operative Credit Society serves as a central credit union for the provincial centrals and large co-operatives all across Canada.

**Section 2.—Other Commercial Finance****Subsection 1.—Trust and Mortgage Loan Companies**

Trust and mortgage loan companies are registered with either the federal or provincial governments. They operate under the Loan Companies Act (RSC 1970, c. L-12) and the Trust Companies Act (RSC 1970, c. T-16, as amended) or under corresponding provincial legislation.

The first mortgage loan companies were established in Ontario in the 1840s as co-operative associations to provide mortgage finance for their members. These associations evolved under legislation which was amended to give them permanent corporate status as mortgage-lending institutions. They obtained their funds principally by selling medium- and long-term debentures to the public but also had the power to open deposit accounts. Trust companies were first incorporated in Ontario in the 1880s. Although the trust company legislation prevented them from borrowing funds, they had the power to accept funds in guaranteed trust accounts and invest them in specified types of assets. This feature of trust company legislation is now general throughout Canada. The trust companies operate as financial intermediaries in the same way as mortgage loan companies, chartered banks or savings and other financial institutions and are the only corporations in Canada with power to act as trustees for property interests and to conduct other fiduciary business. In this capacity they act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents in the management of estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, as transfer agents and registrars for stock and bond issues, as trustees for bond issues and, where so appointed, as authorized trustees in bankruptcies.

Trust and mortgage loan companies were established and grew rapidly under provincial legislation in the late nineteenth and early twentieth centuries. Some companies were chartered by special Acts of Parliament but it was not until 1914 that federal legislation was passed and the Federal Government began to regulate trust and loan companies registered under its Acts. In 1970 there were nine federal trust companies and 13 federal loan companies. The Superintendent of Insurance examines these companies and also, by arrangement with the provinces, trust and loan companies incorporated in Nova Scotia and trust companies incorporated in New Brunswick and Manitoba. Companies must be licensed by each province in which they wish to operate.

Although there are many differences among the various federal and provincial Acts, the broad lines of the legislation are common. In their intermediary business the companies have the powers mentioned above to borrow or, in the case of trust companies, accept funds in guaranteed accounts subject to maximum permitted ratios of these funds to shareholders' equity. The funds may be invested in specified assets which include first mortgages on real property, government securities, and the bonds and equity of corporations having established earnings records, and the companies may grant loans on the security of such bonds and stocks and unsecured personal loans. Trust and loan companies are not required to hold specified cash reserves, as are the chartered and savings banks, but there are broadly defined "liquid asset" requirements in a number of the Acts.

The trust and mortgage loan companies have been substantial members of the Canadian financial system since their early years. In the 1920s they held about one half of the private mortgage business in Canada but their growth rate fell off sharply because of the impact of the depression of the 1930s and World War II on the mortgage business. In the years since the War the re-emergence of strong demands for mortgage financing and the willingness of many trust and loan companies to compete aggressively for funds have led to sustained rapid expansion.

According to Statistics Canada figures, mortgage loan companies had assets before investment in subsidiaries of \$3,428,000,000 at the end of 1970 compared with \$3,007,000,000 a year earlier. Their holdings of mortgages amounted to \$2,868,000,000, or 84 p.c. of total assets. To finance their investments, these companies had borrowed \$2,307,000,000 or 67 p.c. of their total funds by the sale of debentures and \$483,000,000 from demand deposits.

At the end of 1970, company and guaranteed funds of trust companies in the Statistics Canada survey were \$6,514,000,000 compared with \$5,689,000,000 a year earlier, an increase of 14 p.c. Trust companies, while not specializing in mortgage financing to the same extent as loan companies, in recent years have been putting a high proportion of their funds into these investments with the result that mortgages were 59 p.c. of their assets at the end of 1970. The trust companies had \$4,442,000,000 in term deposits outstanding and \$1,472,000,000 in demand deposits at the end of 1970, accounting for 91 p.c. of total funds.

About one third of the demand or savings deposits were in chequable accounts. There is considerable variety among the trust companies and a few have developed a substantial short-term business, raising funds by issuing certificates for terms as short as 30 days and also operating as lenders in the money market. Nevertheless, it remains true that the main business of the trust companies in their intermediary role is to channel savings into mortgages and other long-term investments. In addition, trust companies, as of Dec. 31, 1970, had \$23,488,000,000 under administration in estate, trust and agency accounts.

More complete and up-to-date financial information may be found in quarterly balance sheet statements published by Statistics Canada and the Bank of Canada, the reports of the Superintendent of Insurance on Loan and Trust Companies and the reports of provincial supervisory authorities.

**Subsection 2.—Licensed Small Loans Companies and Licensed Money-Lenders\***

Small loans companies and money-lenders are subject to the Small Loans Act (RSC 1970, c. S-11). This Act, first passed in 1939, sets maximum charges on personal cash loans not in excess of \$1,500 and is administered by the Department of Insurance. Lenders not licensed under the Act may not charge more than 1 p.c. per month. Those wishing to make small loans at higher rates must be licensed each year by the Minister of Finance under the Small Loans Act. The Act allows maximum rates, including charges of every kind, of 2 p.c. per month on unpaid balances not exceeding \$300, 1 p.c. per month on the portion of unpaid balances exceeding \$300 but not exceeding \$1,000 and one half of 1 p.c. on any remainder of the balance exceeding \$1,000. Loans in excess of \$1,500 are not regulated and lenders operating entirely above this limit and the larger loans of licensed lenders are thus exempt from the Act. Nor does the Act regulate charges for the instalment financing of sales. Prior to Jan. 1, 1957, the Act applied only to loans of \$500 or less and the maximum rate was 2 p.c. per month.

At the end of 1970, there were five small loans companies and 45 money-lenders licensed under the Act. Small loans companies are incorporated by special Acts of the Parliament of Canada, the first of them commencing business in 1928; the money-lenders include provincially incorporated companies and one partnership. Many of the small loans companies and money-lenders are affiliated with other financial institutions, principally Canadian sales finance companies and United States finance or loan companies, and these subsidiary companies account for a high proportion of the total business of licensed lenders. The affiliations with sales finance companies reflect the close relationship between instalment financing and the consumer loan business. Statistics Canada publishes quarterly balance sheets for sales finance and consumer loan companies as a whole and does not attempt to distinguish the two groups within the industry.†

The subsidiary small loans companies and money-lenders obtain most of their funds through their parent companies. A few of the larger companies have supplemented their bank loans by selling short-term paper in the market but the amount has been small compared with the short-term market borrowing of the sales finance companies. The smaller independent companies rely mainly on their shareholders and on borrowing from the chartered banks.

The annual figures of assets and liabilities given in Table 24 for 1967-70 are from the Department of Insurance report.‡

\* Prepared by the Superintendent of Insurance for Canada.

† See Statistics Canada publication, *Financial Institutions* (Catalogue No. 61-006). More complete data on the business of licensed lenders are given in the *Report of the Superintendent of Insurance for Canada on Small Loans Companies and Money-Lenders* for the year ended Dec. 31, 1970 (Catalogue No. In 3-4/1970).

There was a marked decrease in 1970 compared with 1969 in the number and amount of small loans made by the combined companies. Small loans made to the public during the year numbered 1,026,115 as against 1,351,092 in 1969, a drop of about 24.1 p.c.; the amount of such loans decreased from \$823,277,807 to \$637,093,691, a drop of about 22.6 p.c. The average small loan made was \$621 in 1970 and \$609 in 1969. At the end of the year, small loans outstanding numbered 1,039,970 for an amount of \$524,817,187, or an average of \$505 per loan; comparable figures for 1969 were 1,155,108, \$595,658,632 and \$516, respectively.

Gross profits of small loans companies and money-lenders before income taxes and before taking into account any increase or decrease in reserves for bad debts increased from \$51,348,419 in 1969 (\$8,427,200 being the profit on small loans and \$42,921,219 the profit on business other than small loans) to \$55,506,108 in 1970 (\$2,147,980 being the profit on small loans and \$53,358,128 the profit on other business).

### Subsection 3.—Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870, was defined as 15/73 of the British gold sovereign.\* That is, the par rate of exchange between the dollar and the pound sterling was fixed at \$4.866, making the Canadian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents, it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under \$2 per thousand.

On the outbreak of World War I, Canada and Britain suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at \$4.76 in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of Britain, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country.

From 1915 to the end of 1917, fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918, the Canadian dollar began to weaken. After the pound was unpegged in 1919, the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as \$3.18.

By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After Britain resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930, when it

\* The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

went to a small premium in New York, the dollar remained below parity until Britain abandoned the gold standard in September 1931. The position of the Canadian dollar with respect to the gold standard at this time has never been entirely clear. The value of the dollar fairly consistently fell below the gold export point in the foreign exchange market, yet the dollar was never officially declared to be "off" gold until September 1931. The level of between one and two percentage points below parity during much of this period was certainly within narrower limits than it would have been if the Canadian dollar had simply been allowed to move freely in response to market forces, but official policy in the matter was never disclosed. In September 1931, when the gold standard was officially abandoned, the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows\* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933, both currencies had reached a premium in New York. Meanwhile, in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved toward resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at \$35 per ounce. After that the exchange rate between the Canadian and United States dollars stabilized. Until the outbreak of war in 1939, much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).\*

On the outbreak of World War II in September 1939, Britain and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of \$4.02½ and \$4.03½, respectively, in terms of the United States dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control† in Canada and established fixed buying and selling rates of \$1.10 to \$1.11 for the U.S. dollar and \$4.43 to \$4.47 for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to \$1.10½ and \$4.45, respectively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of \$1.00 to \$1.00½ and for sterling \$4.02 to \$4.04. These rates continued in effect until Sept. 19, 1949 when, following a 30.5-p.c. reduction by Britain in the value of sterling to \$2.80 U.S. (an action which was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds. Sterling was quoted at \$3.07¼ and \$3.08¼ on the basis of the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2, and that the rate would henceforth be determined in the market for foreign exchange. This policy was carried out within the framework of exchange control until Dec. 14, 1951, at which time the Foreign Exchange Control regulations were revoked by the Governor in Council, terminating the period of exchange control that had prevailed in Canada since 1939. The Foreign Exchange Control Act was repealed in 1952. On May 2, 1962, the Minister of Finance announced that the Canadian dollar was being stabilized at a fixed par value of 92½ cents in terms of United States currency. This action was taken with the concurrence of the International Monetary Fund and, in accordance with the Articles of Agreement of that organization, the Government of Canada undertook to maintain the Canadian exchange rate within a margin of 1 p.c. on either side of the established par value.

\* Noon quotations. Daily highs and lows may have exceeded these rates.

† The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in the 1941 to 1952-53 editions of the Year Book.

On May 31, 1970, the Government of Canada announced a decision not to maintain the exchange rate of the Canadian dollar within the 1-p.c. parity band prescribed by the IMF for the time being. The movements of the U.S. dollar in Canadian funds from January 1961 to December 1971 are shown in Table 25.

<sup>1</sup> Convertible foreign currency holdings of the Exchange Fund Account, the Receiver General for Canada and the Bank of Canada. <sup>2</sup> Valued at official parity rates in terms of U.S. dollars. <sup>3</sup> Holdings of Special Drawing Rights (SDRs) reflect allocations to Canada of SDRs and transactions involving Canada under the arrangements by the International Monetary Fund providing for the use of SDRs by member countries. <sup>4</sup> Includes all overnight and forward transactions of the Exchange Fund Account and the Bank of Canada that affect the total of official reserves. A positive figure indicates a net commitment to take delivery of foreign exchange in the future and a negative figure indicates a commitment to deliver foreign exchange in the future.

## Subsection 4.—The Bond Market\*

**Sales of Canadian Bonds.**—A net total of \$5,846,000,000 was raised in the bond market by Canadian federal and junior governments and corporate borrowers in 1970. This amount was about \$2,257,000,000 more than that raised in 1969, and major bond borrowers were the Government of Canada and provincial governments, recording net new issues of \$1,844,000,000 and \$1,987,000,000, respectively.

The \$1,987,000,000 of new issues of provincial governments included \$863,000,000 purchased by the Canada Pension Plan Investment Fund and about \$171,000,000 through the Quebec Pension Plan. Net new market issues of municipal government bonds amounted

\* A study of developments in Canadian bond markets dealing with behavioural aspects, 1962-69, was published in Statistics Canada publication *Financial flow accounts, System of National Accounts, Fourth Quarter, 1969* (Catalogue No. 13-002).

to \$345,000,000. Corporations resorted to bond financing to the extent of \$1,540,000,000 and other institutions had net new issues in 1970 of \$124,000,000.

Bond yield averages decreased considerably in 1970. Government of Canada bonds for terms of ten years and over yielded 6.99 p.c. at Dec. 31, 1970, compared to 8.33 p.c. a year earlier. Comparable figures for provincials were 8.25 and 9.19 p.c., and for municipals, 8.74 and 9.68 p.c., respectively.

There was an increase of \$51,000,000 in finance and loan company paper, and of \$221,000,000 in banker's acceptances in 1970. Yields on 90-day finance company paper decreased considerably to 5.58 p.c. at the end of 1970 from 9.17 p.c. a year earlier.

**Bonds Outstanding.**—Total government and business bonds outstanding at the end of 1970 amounted to \$70,509,000,000, an increase of 9 p.c. over 1969 and of 45 p.c. since 1965. In the 1965-70 period, the largest increase was one of 81 p.c. in the bonded debt of provincial governments. This increase included issues held in the Canada Pension Plan Investment Fund and the Quebec Deposit and Investment Fund since the inception of the plans in 1966. Corporate bonds outstanding increased by 50 p.c. and municipal government bonds by 29 p.c. between 1965 and 1970.

## 27.—Canadian Bonds Outstanding as at Dec. 31, 1965-70, and Annual Changes in Bonds and in Short-Term Paper Outstanding

Note.—Federal, provincial and municipal bonds include direct and guaranteed issues; institutional bonds exclude bonds payable in Canadian dollars of the International Bank for Reconstruction and Development and certain foreign governments, amounting to \$84,000,000, \$102,000,000, \$119,000,000, \$133,000,000, \$116,000,000 and \$106,000,000 in the years 1965-70, respectively. <sup>1</sup> Changes in bonds outstanding do not agree with Bank of Canada figures on net new issues due to takeovers, bankruptcies, etc.

**Distribution of Bond Holdings.**—Table 28 shows the estimated distribution as at Dec. 31, 1970 of government and corporate bonds among the major purchasers of securities. Governments and the financial institutions specified in the table held a little over one half of the total; of the remainder, non-residents held 21 p.c. and all other residents held 27 p.c. Of the 27 p.c., however, 10 p.c. was made up of holdings by persons of Canada Savings Bonds. The largest identified holders of bonds were chartered banks with 12 p.c. of the total, trusted pension plans with 8 p.c. and life insurance companies with 7 p.c.

**28.—Estimated Distribution of Bond Holdings, as at Dec. 31, 1970**

NOTE.—Federal, provincial and municipal bonds include direct and guaranteed issues; "other" bonds include bonds of religious and other institutions, and a small amount of foreign bonds payable in Canadian dollars; short-term commercial borrowing is excluded. ## PART II.—INSURANCE\*

### Section 1.—Life Insurance

Life insurance in force in Canada with companies registered by the Federal Government (exclusive of fraternal benefit societies) amounted to \$111,116,000,000 at the end of 1970, an increase of \$8,331,000,000 during the year. The ratio of gain in business in force, expressed as a percentage of the amount in force at the beginning of the same year, was 8.1 p.c. in 1970.

Year	In Force at Beginning of Year	Increase in Force for the Year	Percentage Gain
	\$'000,000	\$'000,000	
1930.....	6,157	335	5.4
1935.....	6,221	38	0.6
1940.....	6,776	200	2.9

\* Material in this Part, except as otherwise indicated, was prepared under the direction of the Superintendent of Insurance for Canada, Ottawa. More detailed data are available in the annual reports of the Department of Insurance.

### Subsection 1.—Summary of Life Insurance in Canada

Table 1 summarizes insurance premiums, claims, amounts of new policies effected and amounts of insurance in force on Dec. 31, 1970. These data are presented according to supervising government authorities for the companies and societies concerned, and according to nationality of company or society.

#### 1.—Summary of Life Insurance in Canada according to Supervising Government Authority and by Nationality of Company or Society, 1970

Year, Supervising Authority and Nationality of Company or Society	Insurance Premiums	Claims <sup>1</sup>	New Policies Effected	Insurance in Force, Dec. 31

<sup>1</sup> Death, disability and maturity under insurance contracts.

### Subsection 2.—Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has more than doubled since 1960.

The operations analysed in the tables of this Subsection, with the exception of Table 6, include only those of companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for over 93 p.c. of the life insurance in force in Canada.

## 2.—Life Insurance Effectuated and in Force in Canada by Companies under Federal Registration, Decennially 1880-1960 and Annually 1961-70

NOTE.—Figures for 1869-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855; for 1940-54 in the 1957-58 edition, p. 1168; and for 1955-59 in the 1967 edition, p. 1147. Statistics of fraternal society insurance, excluded here, are given at pp. 1262-1264.

## Subsection 3.—Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 7 and 8 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising outside of Canada as well as in Canada.

**Subsection 4.—Life Insurance in Canada Transacted by Fraternal Benefit Societies**

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 9 gives statistics of life insurance in Canada transacted by fraternal benefit societies and Table 10 shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The first sections of Tables 9 and 10 relate to the Canadian societies registered by the federal Department of Insurance; there were 15 such societies at the end of 1970.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, although forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in

force. Most of these societies and some foreign societies that had not been licensed previously by the provinces have since obtained federal authority to transact business. At the end of 1970 there were 33 foreign fraternal benefit societies federally registered to transact business in Canada, although one of these does not grant life insurance benefits.

<sup>1</sup> All funds, business in and out of Canada.<sup>2</sup> All funds, business in Canada only.**Subsection 5.—Life Insurance Effectuated and in Force Outside Canada by Canadian Companies under Federal Registration**

In this Subsection, there are given for the years 1969 and 1970 summary statistics of insurance effectuated and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The data given are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies.

Canadian life insurance companies operating under federal registration at Dec. 31, 1970 had life insurance in force amounting to \$32,573,350,990 in countries outside Canada. Insurance in force in currencies other than Canadian dollars amounted to \$32,465,754,127; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to \$76,774,967,949 at Dec. 31, 1970, and the total business on the books of these companies, in and out of Canada, amounted to \$109,348,318,939. Thus, over 29 p.c. of the total business in force

for Canadian companies registered by the Federal Government was in force in countries outside Canada. In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1970, Commonwealth and foreign investments in the amount of \$4,832,524,452.

Approximately 75 p.c. of all business in force in currencies other than Canadian is in United States currency and 15 p.c. is in sterling. From a slightly different point of view, approximately 19 p.c. of this business in force is in currencies of Commonwealth countries other than Canada, and 81 p.c. in currencies of foreign countries.

## Section 2.—Fire and Casualty Insurance

At the end of 1970 there were 232 companies registered by the Federal Government to transact fire insurance in Canada (82 Canadian, 45 British and 105 foreign). Of these companies, 226 (78 Canadian, 44 British and 104 foreign) were also registered to transact casualty insurance. In addition, 123 companies were registered by the Federal Government to transact casualty insurance but not fire insurance (35 Canadian, 6 British and 82 foreign). Of the companies registered to transact fire and/or casualty insurance, 99 were also registered to transact life insurance; 13 of these were registered for fire, life and casualty insurance and 86 for life and casualty but not fire insurance. It should also be noted that, in addition to the companies registered by the Federal Government to transact casualty insurance, there were 31 registered fraternal benefit societies transacting accident and sickness insurance, of which 30 also transacted life insurance.

The operations analysed in the tables of this Section, with exception of Table 12, include only those companies under federal registration. As shown in Table 12, some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only. These companies generally confine their operations to the province of incorporation and many of them are mutual organizations transacting only fire insurance on a county, municipal or parish basis. The table relates to insurance companies only; no data are included for fraternal benefit societies.

### Subsection 2.—Fire Losses

The information in Tables 15 to 17 which deals with the loss of property and life caused by fire, has been summarized from the annual report *Fire Losses in Canada* prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses, not included in these figures, in 1970 amounted in \$3,789,243 from 1,404 fires; average federal losses for the period 1961-70 amounted to \$4,116,087 from an annual average of 1,671 fires.

### 15.—Statistics of Fire Losses, 1961-70

(Excludes forest fires and Federal Government property losses)

### Subsection 4.—Finances of Companies Transacting Fire and Casualty Insurance under Federal Registration

The financial statistics of Tables 19 and 20 relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.

**19.—Total Assets and Liabilities for Fire and Casualty Insurance of Canadian Companies and Assets and Liabilities in Canada for Fire and Casualty Insurance of British and Foreign Companies under Federal Registration, 1968-70.**

### Section 3.—Government Insurance

#### Federal Government Insurance

In recent years, various insurance schemes have been adopted by the Federal Government or undertaken co-operatively by the federal and provincial governments. Information on unemployment insurance, hospital insurance, veterans insurance, export credit insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

**Deposit Insurance.**—The Canada Deposit Insurance Corporation (RSC 1970, c. C-3) was established in 1967 to provide for the benefit of persons having deposits with a member of the Corporation, insurance against the loss of deposits up to a maximum of \$20,000 for any one depositor.

Membership in the Deposit Insurance Corporation is obligatory for chartered banks, Quebec savings banks and those federally incorporated loan and trust companies that accept deposits from the public. Provincially incorporated loan and trust companies that accept deposits from the public are eligible to apply for membership if they have the consent of the province of incorporation.

The definition of deposits, as set out in the general by-law of the Corporation, might be summarized as money received by a member institution that is repayable on demand or notice and money that is repayable on a fixed date not more than five years after the date on which the money is received. Deposits not payable in Canada or in Canadian currency are not insured.

### **Provincial Government Insurance\***

**Manitoba.**—The Manitoba Public Insurance Corporation is a Crown corporation established under the Automobile Insurance Act proclaimed Sept. 21, 1970, and created by order of the Lieutenant-Governor in Council on Sept. 29, 1970. The Act and its Regulations provide for the establishment of a universal, compulsory automobile insurance plan and of other plans of automobile insurance within the province.

The plan, known as *Autopac*, provides the following basic coverage on Manitoba-licensed motor vehicles: (1) bodily injury (including passenger hazard) and property damage liability to \$50,000; no-fault all perils coverage with \$200 deductible and nil deductible for total loss covered by fire, lightning or theft of the entire vehicle; if a vehicle is stolen, the owner may be reimbursed for transportation expenses up to \$8 a day for up to 30 days; and (2) no-fault personal injury benefits (paid automatically without limiting the insured's right to seek a larger settlement); death benefits to a maximum of \$10,000; funeral expenses to a maximum of \$500; benefits up to \$6,000 for dismemberment, disfigurement or impairment; loss-of-income payment of \$50 a week for total disability and \$25 a week for partial disability, beginning one week after disability; for total disability, payments continue for the period during which the insured remains totally disabled, with no time limit, and for partial disability payments continue up to 104 weeks.

Revenue for the plan comes from two sources—premiums on driver licences and premiums on vehicles. Premiums on driver licences recognize driver responsibility; a driver is allowed to accumulate five demerit points (based on driving infractions) before being assessed an additional driver-insurance premium. Premiums on vehicles are based on such factors as year, make, model, use and rating territory, based on the address of the vehicle owner.

The plan was inaugurated Nov. 1, 1971 for an initial four-month period; thereafter, it will operate concurrently with the 12-month vehicle registration period which is Mar. 1 through the following Feb. 28.

Information regarding any aspect of the insurance program may be obtained from the Manitoba Public Insurance Corporation, 330 Portage Avenue, Winnipeg, Man. R3C 0C4.

**Saskatchewan.**—The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business in May 1945. It deals in all types of insurance other than sickness and life. The aim of the legislation is to provide residents of the province with low-cost insurance designed for their particular needs. Rates are based on loss experience in Saskatchewan only and the surplus is invested, to the extent possible, within the province. Premium income for 1971 amounted to \$17,676,528 and earned surplus to \$355,969. The total amount made available to the Saskatchewan Government Finance Office from 1945 to Dec. 31, 1971 was \$10,005,213. Assets at the latter date were \$50,490,926, of which \$27,100,000

\* Prepared by the provincial authorities concerned.

was invested in bonds and debentures issued by the Province of Saskatchewan and by Saskatchewan schools, municipalities and hospitals. Independent insurance agents, numbering 563, sell government insurance throughout the province.

The Automobile Accident Insurance Act, administered by the Saskatchewan Government Insurance Office on behalf of the provincial government, provides a comprehensive automobile accident insurance plan for the protection of the public in this province. Premiums paid by motorists create a fund from which benefits are paid in the event of death, injuries and damages sustained in automobile accidents. Any surplus over payments is used to increase benefits, reduce premiums, or absorb deficits in periods of high accident frequency. The surplus is not transferable to the general operations of the Saskatchewan Government Insurance Office, nor is any surplus credited to the provincial government. The plan provides for public liability insurance, with an inclusive limit of \$35,000 for bodily injury and property damage, as well as comprehensive and collision coverage subject to a \$200 deductible for private passenger cars. Rates vary from \$5 a year for older farm trucks to \$94 for late-model private passenger cars, and also vary for other types of motor vehicles depending on size and usage. From the inception of the Act in 1946 to Dec. 31, 1971, more than \$208,000,000 was paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Office Librarian, Saskatchewan Government Insurance Office, Regina, Sask.

**Alberta.**—Provincial government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates (1) to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and (2) to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. Although both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act. It should be noted that the Alberta Hail Insurance Act and the Alberta Crop Insurance Act are administered by the Alberta Hail and Crop Insurance Corporation and each contains a clause exempting its operations from the provisions of the Alberta Insurance Act.

Further information on provincial insurance matters may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

### Section 1.—The Department of National Defence

The Department of National Defence was created by the National Defence Act, 1922, which established one civil department of government in place of the previous Departments of Militia and Defence, Naval Service and the Air Board, and now operates under authority of RSC 1970, c. N-4.

The Minister of National Defence is responsible for the control and management of the Canadian Forces, the Defence Research Board and all matters relating to national defence establishments and works for the defence of Canada. He is also responsible for the Canada Emergency Measures Organization and for certain civil emergency powers, duties and functions as outlined in Order in Council P.C. 1965-1041, dated June 8, 1965, as amended. In addition, he is responsible for presenting before the Cabinet matters of major defence policy for which Cabinet direction is required.

The Defence Council meets at regular intervals to provide for the briefing of the Minister, a forum for the exchange of views and policy formulation and the discussion of specific matters requiring the approval, decision or direction of the Minister. The Council consists of the Minister of National Defence as Chairman, the Deputy Minister of National Defence, the Chief of the Defence Staff, the Chairman of the Defence Research Board, the Vice Chief of the Defence Staff, and a Secretary. Other senior officials of the Department may be invited to attend.

In addition, the Department has a Defence Management Committee which at regular meetings deals with items of significance requiring the approval, decision or direction of the Deputy Minister, the Chief of the Defence Staff and/or the Chairman of the Defence Research Board prior to their submission to the Minister of National Defence as required. The Committee consists of the Deputy Minister of National Defence as Chairman, the Chief of the Defence Staff, the Chairman of the Defence Research Board, the Vice Chief of the Defence Staff, and a Secretary. Associate Members are the Associate Deputy Minister(s), the Assistant Deputy Ministers, the Branch Chiefs at CFHQ, the Vice Chairman of the Defence Research Board and the National Co-ordinator, Civil Emergency Measures.

\* Prepared by Information Services, Department of National Defence, Ottawa.

The Deputy Minister is charged with the over-all control and management of the Department of National Defence. Assisting the Deputy Minister are the following principal officers:—

- (1) The Assistant Deputy Minister (Finance) is responsible for the management and control of financial policy and resources, the development of policy guidance to permit systematic planning and programming of defence activities by the Defence Staff, the development of procedures for the planning and control of the defence program and the allocation of resources. He also exercises control of financial matters including accounting and auditing procedures.
- (2) The Assistant Deputy Minister (Manpower) is responsible for the control and management of all policies relating to the total civilian and military work force of the Department. This responsibility includes manpower policy development, manpower control and compensation development, civilian classification and staff relations.
- (3) The Assistant Deputy Minister (Logistics) is responsible for policy concerning the management and control of logistics, including real property. These responsibilities include the review, analysis and approval of programs for acquisition or disposal of materiel, supplies, equipment, building construction and property.
- (4) The Associate Deputy Minister is responsible for the development and administration of departmental policies and procedures that will ensure the availability of elementary and secondary educational facilities of provincial standards, consistent with the Official Languages Act and the language of the home, up to the level equivalent of Ontario grade 13, to children of military personnel serving in Canada and Europe.
- (5) The Judge Advocate General is responsible for the administration of military justice in the Canadian Forces. He is also the legal adviser to the Department, the Canadian Forces and the Defence Research Board.
- (6) The National Co-ordinator—Civil Emergency Measures is responsible for the co-ordination and support of federal measures designed to enable the nation to survive and recover from wartime emergencies and peacetime disasters and to assist provincial, territorial and municipal governments in civil emergency planning matters.
- (7) The Director General of Information Services is responsible for the dissemination of unclassified information on defence matters to the public, the Canadian Forces and civilian staffs of the Department, including the Defence Research Board. He prepares answers to parliamentary questions and also plans and co-ordinates community relations programs.

The Chief of the Defence Staff is responsible for advising the Minister of National Defence on all operational military matters and is charged with the control and administration of the Canadian Forces. The principal officers reporting to him are:—

- (1) The Vice Chief of the Defence Staff is responsible for operational training and readiness of the Canadian Forces and the reserves, tactical development, communications and operational requirements, intelligence, plans and program planning.
- (2) The Chief of Personnel is responsible for the Canadian Forces personnel in the Department of National Defence, including recruiting, individual and basic training and career administration and for the provision of such services as medical, dental and religious welfare. He is also responsible for the operational aspects of civilian personnel.
- (3) The Chief of Technical Services has three major responsibilities—Logistics, which is the procurement, storing, maintenance and distribution of materiel; Engineering, which is design development, test evaluation and inspection of materiel; and Construction Engineering, which is the acquisition, construction and maintenance of defence establishments and property.
- (4) The Comptroller General is primarily responsible for co-ordinating the financial aspects of the Canadian Forces, which include the preparation of estimates, the control of expenditures and the control of the allocation of financial and manpower resources. He is also responsible for management improvement and management engineering.

The Chairman of the Defence Research Board is responsible for carrying out those duties in connection with research relating to the defence of Canada and developments in material which the Minister may assign, and for advising the Minister on all matters relating to scientific, technical and other research and development that, in his opinion, may affect national defence. He is assisted by a Vice Chairman and the following principal officers: (1) the Deputy Chairman (Scientific) is responsible for advising the Chairman on the development of defence science policy, program planning and review and military liaison; and (2) the Deputy Chairman (Operations) is responsible for ensuring that the finances, personnel and other resources of the Defence Research Board are available and are employed to their maximum and in accordance with agreed program priorities.

Defence Construction (1951) Limited (DCL) was established May 10, 1951 under authority of the Defence Production Act. It is a Crown company incorporated under the Canada Corporations Act. By P.C. 1965-725 dated Apr. 22, 1965, the duties, powers and functions in respect to the construction of defence projects were transferred from the Minister of Defence Production to the Minister of National Defence. Although DCL is an agency corporation reporting to the Minister of National Defence, it is not part of the organizational structure of the Department.

The Minister of National Defence is responsible for administering the following laws which relate to the Department of National Defence: National Defence Act (RSC 1970, c. N-4), Defence Services Pension Continuation Act (RSC 1970, c. D-3), Canadian Forces Superannuation Act (RSC 1970, c. C-9) and Visiting Forces Act (RSC 1970, c. V-6).

### **Liaison in Other Countries**

The Chief of Defence Staff, who is the Canadian Military Representative to the North Atlantic Treaty Organization, is responsible for advice on all NATO military matters and acts as a military adviser to the Government and to Canadian delegations to NATO.\* For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Defence Liaison Staff London, representing the Canadian Armed Forces and the Defence Research Board in Britain, the Commander of which is the principal military adviser to the Canadian High Commission in London; (2) the Canadian Defence Liaison Staff Washington, representing the Canadian Armed Forces and the Defence Research Board in the United States, the Commander of which is the principal military adviser to the Canadian Ambassador in Washington, and is the Canadian National Liaison Representative to the Supreme Commander, Allied Command Atlantic (SACLANT) Headquarters; two logistic liaison units are also located in the United States; (3) in Brussels, a Canadian member of the NATO Military Committee in Permanent Session, a Military Adviser to the Canadian Permanent Representative to the North Atlantic Council and also a Canadian National Military Representative to SHAPE; and (4) Canadian Forces Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence, which provides advice on such matters to the respective governments.

## **Section 2.—The Command Structure of the Canadian Forces**

The Canadian Forces are organized on a functional basis to reflect the major commitments assigned by the Government. Under this concept, all Forces devoted to a primary mission are grouped under a single commander who is assigned sufficient resources to discharge his responsibilities. Specifically, the Canadian Forces are formed into a Canadian Forces Headquarters and seven major Commands reporting to the Chief of the Defence Staff. Canadian Forces Headquarters, in addition to its headquarters function, is responsible for the logistic support of the Forces and, for this purpose, retains operational command of major logistic units. The roles of the Commands are:—

### **MOBILE COMMAND**

The role of Mobile Command is: to provide military units suitably trained and equipped, including tactical air support, for the protection of Canadian territory; to maintain operational readiness of combat formations in Canada required for support of overseas commitments; to support United Nations or other peace-keeping/peace-restoring operations.

The Forces assigned include: three air portable combat groups in Canada; the Canadian Airborne Regiment; the United Nations Force in Cyprus; two tactical fighter squadrons; four tactical helicopter squadrons and one helicopter operational training squadron; one transport helicopter squadron; and one combat training centre.

The Militia and the Air Reserve components are also controlled and administered by Mobile Command.

\* Canada's contributions to NATO are outlined on p. 1279.

### MARITIME COMMAND

All Canadian Maritime Forces, both sea and air, are under the command of the Commander, Maritime Command whose Headquarters is in Halifax. The Deputy Commander is the Commander, Maritime Forces Pacific with Headquarters in Esquimalt. The role of Maritime Command is to defend Canadian interests from assault by sea and to support measures to protect Canadian sovereignty. Support is provided to NATO by assisting in conducting anti-submarine warfare in the Allied Command, Atlantic. The Commander Maritime Command is the NATO Commander of the Canadian Atlantic Sub-Area of the Western Atlantic Command, under the Supreme Commander, Allied Command Atlantic (SACLANT). Additional roles are to provide sea lift required by Mobile Command, and to conduct search and rescue operations within the Atlantic and Pacific Search and Rescue Areas (roughly, the Atlantic Provinces and British Columbia).

The Naval Reserve component is controlled and administered by Maritime Command.

The resources assigned to Maritime Command include destroyers, operational support ships, submarines and aircraft for short- and long-range patrol, as well as training and communications facilities within the Command.

### AIR DEFENCE COMMAND

Air Defence Command participates with the United States in the air defence of North America, through NORAD. It has command of three interceptor squadrons, two SAM squadrons, one SAGE control centre, two BUIC centres and two transcontinental radar lines. Operational control of NORAD assigned forces is exercised by HQ NORAD.

### AIR TRANSPORT COMMAND

The role of Air Transport Command is to provide air transport to Canadian Forces everywhere, and to conduct search and rescue operations in the Eastern Search and Rescue Area (roughly Ontario and Quebec). It has three squadrons operating medium- and long-range cargo- and troop-carrying aircraft as well as four transport and rescue squadrons.

### TRAINING COMMAND

The role of Training Command is to provide individual training for the Canadian Forces and to conduct search and rescue operations within the Western Search and Rescue Area (roughly, Manitoba, Saskatchewan and Alberta). All former training units of the RCN, the Canadian Army and the RCAF where individual training is carried out have been placed under functional control of Training Command. The Canadian Military Colleges (Royal Military College, Royal Roads and Collège militaire royal de Saint-Jean), the Staff Colleges and National Defence College are under the direct control of Canadian Forces Headquarters (see pp. 1281-1283). Land/air warfare operational training and basic parachutist training are the responsibility of Mobile Command; basic fixed-wing and helicopter pilot training are a Training Command responsibility.

### THE CANADIAN FORCES COMMUNICATIONS COMMAND (CFCC)

The role of the CFCC is to provide fixed communications networks for the Canadian Forces and to provide a national communications system for survival operations (civil defence). To carry out this role, CFCC commands all fixed communications installations within Canada.

### CANADIAN FORCES EUROPE

The Canadian Forces allocated to support NATO in Europe are part of Canadian Forces Europe. The land element is 4 Canadian Mechanized Battle Group operationally responsible to the Central Army Group. The air element, 1 Canadian Air Group, consisting of three CF-104 Starfighter squadrons, is operationally assigned to 4 Allied Tactical Air Force. These elements are located in the Lahr area of Germany and are administratively supported by CFB Europe at Lahr.

## Administration of Military Bases in Canada

Staffs and services required below Command Headquarters level to administer and support units based in a particular locality have been organized on Canadian Forces bases. The primary role of each base is to provide base-level administration and supporting services to those units located on or near the base. Each base has been allocated to a functional Commander, to whom the base Commander reports.

## Function/Regional Organization

Functional Commanders have been assigned a regional as well as a functional responsibility for such actions as representation to provincial governments, aid of the Civil Power, emergency and survival operations, and administration of cadets, as well as regional support services for all units in the region.

Canada has been divided into five regions which have been assigned to functional Commanders as follows: Atlantic (Newfoundland, Nova Scotia, Prince Edward Island, New Brunswick)—Maritime Command; Eastern (Quebec)—Mobile Command; Central (Ontario)—Air Transport Command; Prairie (Manitoba, Saskatchewan, Alberta)—Training Command; Pacific (British Columbia)—Maritime Forces Pacific.

### Other Command Elements

Northern Region Headquarters located at Yellowknife, N.W.T., provides representation to the Governments of the Yukon Territory and the Northwest Territories and exercises a co-ordinating function for all military activities in that region of Canada.

The Canadian Defence Education Establishment controls and administers the staff colleges and military colleges for CFHQ and co-ordinates officer training and development for the Canadian Forces.

## Section 3.—Operations

### Maritime Forces

**The Fleet.**—As of September 1971, the following vessels were in service: 20 Destroyer Escorts/Destroyer Escorts Helicopter Equipped (two of which are undergoing major modernization), three Operational Support Ships; three Oberon Class Submarines; one Tench Class Submarine; six Bay Class Training Vessels; four Gate Vessels (employed as training vessels); one Experimental Hydrofoil; and two Escort Repair Vessels (retained in service as alongside work-shops and temporary accommodation vessels). Four Iroquois Class Helicopter Destroyers under construction are expected to join the Fleet in 1972 and 1973.

**Operations in 1971.**—Maritime Forces participated in four NATO exercises carried out in the North Atlantic and, in addition, one destroyer was assigned to the NATO Standing Naval Force Atlantic for a period of three months. Combined exercises with United States Forces were conducted on both the Pacific and Atlantic Coasts and training was conducted in the Bermuda and San Juan areas in order to maintain individual ships at an operational standard. Between these exercises, ships made goodwill visits to the United States, Britain, the Netherlands, Belgium, France, Portugal, Mexico, Columbia and Venezuela.

Four land-based maritime air squadrons were contributed in 1971 to the Maritime Defence of North America; three of these based on the East Coast and one based on the West Coast are equipped with *Argus* aircraft. A continuous program of aircraft modernization and re-equipping with improved anti-submarine devices was conducted throughout the year. The East and West Coast squadrons participated in a number of national, international and NATO anti-submarine exercises, and maintained daily patrols and surveillance of ocean areas adjacent to the Canadian coastlines. A shore-based squadron of CS2F-3 (*Tracker*) aircraft was also operational in 1971 in the surveillance role. Up to nine CHSS-2 (*Sea King*) helicopters are borne on Destroyer Escorts (DDH ships) and assist in carrying out long-range ASW surveillance at sea.

### Air Forces

**Operations in 1971.**—The Canadian Forces contribution to the air defence of North America during the year consisted of three CF-101B interceptor squadrons, two *Bomarc* surface-to-air missile squadrons and 28 radar sites. These forces, together with the Distant Early Warning Line (DEW), operated under the operational control of North American Air Defence Command (NORAD).

*Princess Patricia's Canadian Light Infantry in winter training at Suffield, Alta.*

In late 1971, the three CF-104 squadrons which comprise No. 1 Canadian Air Group, Canada's NATO air contribution to Europe, terminated the nuclear role and undertook the conventional role of support of Allied Forces in Central Europe. Mobile Command's two CF-5 squadrons will be expanded in 1972 to enable them to reinforce NATO's North Flank, as stated in the White Paper, and the squadrons will train in mid-air refuelling operations with the CC-137 Boeing Aircraft of Air Transport Command to reduce reaction times to the minimum. The CF-5s continue air support operations in co-operation with land forces which are engaged in Defence of Canada Exercises aimed at improving the CF's capability of operating effectively in the Canadian Arctic. During 1971, the mobility of the Land Forces was enhanced by the creation of 4 Tactical Helicopter Squadrons. These squadrons are equipped with the twin-engine CH-135 for tactical troop lift and the COH-58A for light liaison and reconnaissance tasks.

Air Transport Command (ATC) continued in 1971 to provide support to CFB Europe using long-range *Boeing 707* and *Hercules* aircraft. A *Caribou* maintained in India/Pakistan in support of UNMOGIP was replaced by a *Twin Otter* at mid-year. In Canada, ATC airlifted defence personnel and cargo from coast to coast and into the Arctic regions. *Hercules* aircraft were employed for paratroop training of the land forces. Search and rescue services were provided in the Canadian areas of responsibility. Throughout the year, the Canadian Forces processed some 2,800 separate search and rescue incidents and flew more than 8,400 hours on this task.

### **Land Forces**

**Operations in 1971.**—In fulfilment of obligations under NATO, Canada continued to provide ground forces for the defence of Western Europe. The 4th Canadian Mechanized Battle Group, the major units of which are the Royal Canadian Dragoons, 1st

Regiment Royal Canadian Horse Artillery, 1st Battalion Royal 22<sup>e</sup> Regiment and 3rd Canadian Mechanized Commando, constituted the Land Forces contribution to NATO in the Federal Republic of Germany. The Headquarters of the Battle Group is at Lahr and the married quarters are located in the vicinity of Lahr and Baden-Soellingen. Canada has also earmarked from within its Canadian-based Forces a combat group for external reinforcement of the NATO North Flank. Included within this formation is a battalion group held at a high state of readiness for operations on the North Flank under command of the Commander, Allied Command Europe Mobile Force (Land Component) (AMF[L]).

The Canadian Forces continued to provide support for United Nations operations. Canadian participation in the UN Forces in Cyprus included provision of a reduced Infantry Battalion, a Canadian Contingent Headquarters and a Canadian element in the UN headquarters—a total of 580 officers and men. There were also 38 officers and men employed on other UN missions in the Middle East, Kashmir and Korea. In addition, a specially trained and equipped force equivalent to an infantry battalion group in size is maintained in Canada to provide a force for service in support of the UN on short notice to any part of the world.

In addition to its UN commitments, Canada had 21 officers and men participating in the International Commissions for Supervision and Control in Viet-Nam, Cambodia and Laos. The Commission in Cambodia adjourned *sine die* on Dec. 31, 1969 and the Delegation subsequently withdrew. In 1971, 19 Canadian servicemen were in Viet-Nam and two in Laos.

In accordance with obligations embodied in the National Defence Act and departmental policy, the Canadian Forces in 1971 provided aid and assistance in response to requests from various civil authorities. Major undertakings were: (1) aid to the Province of Quebec in maintaining law and order in the province during the period Oct. 14, 1970 to Jan. 4, 1971; (2) assistance to the Department of the Solicitor General in providing personal protection to a group of personages in the Hull-Ottawa area during the period Oct. 12, 1970 to Jan. 4, 1971; (3) assistance to the cities of Moncton, London and Montreal in overcoming difficulties caused by severe snow storms during the winter of 1970-71; (4) assistance to the Department of the Solicitor General in restoring order during the Kingston Penitentiary riot in April 1971; (5) assistance to the Province of Saskatchewan in flood control operations in Regina and Lumsden during April 1971; (6) assistance to the Province of Saskatchewan in airlifting approximately 150,000 lb. of chemical insecticide from the United States during the Bertha Army Worm blight in August 1971; (7) across Canada from 24 locations, Canadian Forces Explosive Ordnance Disposal Teams responded to an average of 52 requests a month from police agencies to assist in rendering safe a great variety of explosives and dangerous chemicals; (8) relief flights in aid of Pakistan refugees using two CC-130 *Hercules* and 11 CC-137 *Boeing* flights carried cargoes consisting mainly of materials for shelters (650,000 lb.) but including other equipment such as ambulances, blankets, clothing and foodstuffs; and (9) engineers from 3 Field Squadron, Chilliwack, B.C. and 1 Construction Engineering Unit, Winnipeg, Man., under the auspices of the Department of Indian Affairs and Northern Development, constructed a 360-foot bridge over the Ogilvy River in the Arctic, beginning on Apr. 3 and completing it on Sept. 3, 1971.

Northern Forces Headquarters, formed in May 1970, has the main role of co-ordinating Canada's increasing military activities north of the 60th parallel of latitude. The Headquarters will also co-ordinate Armed Forces northern activities with other federal agencies, including the Governments of the Yukon Territory and the Northwest Territories.

During the summer of 1971, the Department of National Defence provided assistance to the Federal Government summer programs for students. Approximately 12,500 students between the ages of 16 and 24 were employed in five programs for periods of two to 12 weeks. The types of employment offered were: Program 1—research, engineering, physical education, clerical and maintenance duties at Canadian Forces Bases across

*A 415 Squadron Argus aircraft on surveillance over Cape Dawson, N.W.T.*

Canada for 1,750 students; Program 2—cadet training for 1,000 students, an addition to the existing cadet programs; Program 3—range clearance at Canadian Forces Bases, Gagetown, Valcartier, Petawawa and Wainwright for 1,000 students; Program 4—citizenship and leadership training for 2,000 students; and Program 5—reserve force training for 6,000 students at local units and training centres. In addition, the Department of National Defence provided assistance to the National Museum of Man by establishing and maintaining the base camp for its Project BIG DIG, the over-all aim of which was to investigate the human and natural history of the north shore of Lake Superior by conducting archaeological diggings in selected areas surrounding the town of Wawa, Ont.

### **Section 4.—Training**

All recruit and most basic and advanced trades training in support of the Canadian Armed Forces takes place at various schools under the supervision of Training Command. Maritime Command and Mobile Command maintain functional control of trades and operational training for their personnel.

The Combat Arms School of the Combat Training Centre, CFB Gagetown, N.B., conducts training for officers and men of the armoured, artillery and infantry units of the Regular and Reserve Forces, ranging from basic trades to advanced courses. Similar courses for French-speaking personnel are given at the Combat Arms School Detachment, CFB Valcartier, Que. Training for field engineers and construction trades is given at CFB Chilliwack, B.C.

Recruit training takes place at CFB Cornwallis, N.S., for English-speaking recruits and at CFB St. Jean, Que., for French-speaking recruits. St. Jean is also the site of the English-French Language School although the official languages are taught on a limited scale at selected Canadian Forces Bases, and in civilian centres under the auspices of the

Public Service Commission. Training in other languages is given at the Canadian Forces Foreign Language School in Vanier City, Ont.

Support trades training is conducted at the School of Administration and Logistics, CFB Borden, Ont., and technical trades training is conducted at a number of bases across Canada. Two Fleet Schools, one at CFB Esquimalt, B.C., and the other at CFB Halifax, N.S., provide basic and advanced Maritime trades training and have training facilities for the operational warships on the East and West Coasts.

Basic technical training in French is given at CFB St. Jean, Que. and an expanding trades-training program in that language is given at most of the above-mentioned bases and schools.

Flying training to "wings" standard is based in the Prairie Provinces—pilot selection and basic helicopter flying training at Portage la Prairie, Man., basic fixed-wing flying training at Moose Jaw, Sask., and advanced flying training at Cold Lake, Alta. Navigator and observer training is given at CFB Winnipeg, Man. The operational commands maintain operational flying training units, and technical training units to give equipment-oriented training to tradesmen in these Commands.

### Canadian Military Colleges

The three Canadian Military Colleges are the Royal Military College of Canada, founded at Kingston, Ont., in 1876; Royal Roads Military College, established in 1941 near Victoria, B.C.; and Collège militaire royal de Saint-Jean, established at St. Jean, Que., primarily to meet the needs of French-speaking cadets. The Royal Military College and the Royal Roads Military College were constituted as the Canadian Services Colleges in 1948 and Collège militaire royal de Saint-Jean was opened in 1952. In 1959, the Ontario Legislature granted the Royal Military College a charter empowering it to grant degrees. In 1967, the Canadian Services Colleges were re-designated as the Canadian Military Colleges, in keeping with unification of the Canadian Forces.

The role of the Colleges is to educate and train officer cadets and commissioned officers for a career of effective service in the Canadian Forces. Courses of instruction are designed to develop character and to provide a balanced liberal, scientific and military education leading to degrees in arts, science and engineering. The Royal Military College of Canada accepts senior matriculants and offers a four-year course. Royal Roads Military College accepts senior matriculants who, on successful completion of the second year, go to the Royal Military College of Canada for their third and fourth years. Collège militaire royal de Saint-Jean accepts junior and senior matriculants to pursue a five- or four-year program; the final two years in some disciplines are completed at the Royal Military College.

To be eligible for admission to a Canadian Military College, candidates must be single, Canadian citizens and physically fit. Candidates must have reached their 16th but not their 21st birthday on the first day of January preceding entrance, with the exception of junior matriculation candidates for Collège militaire royal de Saint-Jean who must have reached their 16th but not their 20th birthday on the first day of January preceding entrance. On entry into one of the Canadian Military Colleges, applicants are enrolled as Regular Force Officer Cadets in the Canadian Forces. Costs of tuition, uniforms, books, instruments and other fees are borne by the Department of National Defence. Officer cadets receive a salary of \$200 a month, increasing to \$215 after three years of service, and are charged \$85 a month for board and lodging. On successfully completing their academic and military training, officer cadets are granted permanent commissions in the Regular Force.

Most officer cadets entering the Canadian Military Colleges enrol under the Regular Officer Training Plan. Provision is also made for the entry of a number of Dominion cadets. These are sons of persons who were killed, or died, or are severely incapacitated as a result of service in a component of the Canadian Forces or the Canadian Merchant Marine during hostilities. Dominion cadets enter the Reserve Force and receive free tuition during the first academic year at a Canadian Military College. A limited number of Reserve cadets who pay tuition and other fees during the duration of the course may also be admitted.

During the 1970-71 academic year, 1,178 officer cadets were enrolled at the Canadian Military Colleges, 545 of them at the Royal Military College, 218 at Royal Roads Military College and 415 at Collège militaire royal de Saint-Jean.

### Staff and Defence Colleges

The Canadian Land Forces Command and Staff College at Kingston, Ont., gives a 44-week course for the training of Captains and Majors for command and staff appointments. Although most of the student body is composed of officers of the land element of the Canadian Armed Forces, officers from the sea and air elements and from the armies of other Commonwealth and NATO countries also attend. Instruction involves study of reference material, syndicate discussions, lectures and tutorial indoor and outdoor exercises. In addition to military subjects, the curriculum includes studies in the fields of military technology and operational research; leadership, command and management; national and international affairs; communication skills; and geopolitics. The syllabus is enhanced by a variety of expert military and civilian guest lecturers and by visits to Canadian and United States military and civilian establishments.

The Canadian Forces College in Toronto consists of three institutions for the staff training of officers. (1) At the *Canadian Forces Staff College*, Majors and Lieutenant-Colonels from sea, land and air elements of the Canadian Armed Forces take a 44-week course to prepare them for assumption of higher rank and greater responsibility. The course includes the study of strategic and military problems; national and international affairs; military technology and operational research; geopolitics; management; and communications skills. (2) At the *Canadian Forces Staff School*, all classifications of officers in the rank of Captain take a 10-week course to prepare them to perform staff functions of a general nature that are appropriate to their rank and to provide the foundation for their subsequent professional development. The course includes the study of management and communications skills, national and international affairs, Canada's national defence structure, staff procedures, personnel support services, government and sociology. (3) At the *Canadian Forces Extension School*, selected military and academic courses of study by correspondence are offered to all officers of the Canadian Armed Forces.

The National Defence College at Kingston, the senior college of the Canadian Armed Forces, provides a 47-week course to prepare senior military officers in the ranks of Lieutenant-Colonel and Colonel, and senior officers from other government departments and industry, for appointments to positions of higher responsibility, by enabling them to study together those aspects of national and international affairs which determine or significantly affect Canada's policies. Lecturers are chosen from the leaders in various fields in Canada and other countries. In addition, field studies to certain parts of Canada, the United States, Europe, Asia, Africa, Australia and Latin America familiarize students with conditions and influences in their own country and in other countries.

## Section 5.—Reserves and Cadets

### The Naval Reserve

Recruiting and training of officers and men of the Naval Reserve is conducted mainly through 16 Naval Reserve Units across Canada under the Commander, Maritime Command whose Headquarters is located at Halifax, N.S. Naval Reserve Units are established at the following centres:—

St. John's, Nfld., HMCS *Cabot*  
 Halifax, N.S., HMCS *Scotian*  
 Saint John, N.B., HMCS *Brunswick*  
 Quebec, Que., HMCS *Montcalm*  
 Montreal, Que., HMCS *Donnacona*  
 Toronto, Ont., HMCS *York*  
 Ottawa, Ont., HMCS *Carleton*  
 Kingston, Ont., HMCS *Cataraqui*

Hamilton, Ont., HMCS *Star*  
 Windsor, Ont., HMCS *Hunter*  
 Thunder Bay, Ont., HMCS *Griffon*  
 Winnipeg, Man., HMCS *Chippawa*  
 Saskatoon, Sask., HMCS *Unicorn*  
 Calgary, Alta., HMCS *Tecumseh*  
 Vancouver, B.C., HMCS *Discovery*  
 Esquimalt, B.C., HMCS *Malahat*

Naval Reserve Units, commanded by Reserve Officers, provide both basic and specialized training for officers and men of the Naval Reserve. Additional training is also conducted in Regular Force schools across the country and in HMC Ships.

### The Militia

Following the review undertaken by the Government in 1969 of Canada's defence and foreign policy, the basic priorities of the defence policy were re-defined, with greater emphasis placed on the protection of Canada's national sovereignty. These decisions, coupled with the need for financial restraints, resulted in changes to the organization and role of the Militia within the general context of the re-defined roles of Canada's Armed Forces as a whole.

The Militia has been reduced to a strength of approximately 19,000 which has been achieved by reductions in unit establishments and in the number of service units. Little change was made in the number of armoured, artillery and infantry units because it is for this type of militiaman that the greatest need is foreseen. Command and control is exercised through five Militia Area Headquarters and 21 Militia District Headquarters.

The traditional role of the Militia to support the Regular Force has been re-emphasized. Specifically, the Militia will now: (1) provide trained individuals for augmentation and reinforcement of the Regular Force; (2) provide trained sub-units to support the field force for the defence of Canada and the maintenance of internal security; (3) provide trained personnel for the augmentation of the civil emergency operations organization; and (4) form the base on which the Regular Force could be expanded in the event of an emergency.

To ensure a closer relationship between the Militia and the Regular Force and to facilitate a training program more closely related to its role, the Militia, less 12 communication units, has been placed under direct command of the Commander, Mobile Command. The 12 communication units, whose role is to augment the communication system, are under the command of Canadian Forces Communication Command.

### Air Reserve

The active sub-components of the Primary Reserve of the air element are designated the Air Reserve, which is made up of six Reserve Flying Squadrons and four Air Reserve Regional Headquarters. Montreal and Toronto each has two Flying Squadrons and one Air Reserve Regional Headquarters; Winnipeg and Edmonton each has a single Flying Squadron and an Air Reserve Regional Headquarters. The Air Reserve Regional Headquarters is required to provide the necessary administrative support to the Flying Squadron to include all phases from recruiting to release procedures, except for operational control and flying training. All Air Reserve Squadrons are responsible through 10 Tactical Air Group to the Commander, Mobile Command. All Flying Squadrons are equipped with

the DHC-3 *Otter*. Their role is light tactical air transport and reconnaissance for ground forces. They can be tasked as: (1) tactical air transport, including logistics support, air evacuation of casualties, communications and liaison; (2) airborne surveillance in support of ground forces in a permissive air environment; (3) aerial photography to provide the ground forces with a limited photographic capability that will supplement the reconnaissance provided by specialized tactical reconnaissance aircraft; (4) aerial, visual, photographic operations; and (5) provision of a reserve of trained pilots who can be incorporated into the Mobile Command Flying Units if required.

### Canadian Armed Forces Cadets

The object of the cadet movement in Canada is to provide the opportunity for young men, aged 13 to 18, to acquire the fundamentals of good citizenship and leadership through a combination of training at local cadet units and at summer camps. In keeping with the unified concept of the Canadian Armed Forces, the Sea, Army and Air Cadet organizations have integrated the command and control functions of their respective organizations and adopted a common aim: "To develop in youth the attributes of good citizenship and leadership; to promote physical fitness; and to stimulate their interest in the Sea, Land and Air elements of the Canadian Forces". While cadet officers remain environmental, they are commissioned in the Cadet Instructor List which is a sub-component of the Canadian Forces Reserve.

**Royal Canadian Sea Cadets.**—Royal Canadian Sea Cadets, sponsored by the Navy League of Canada in partnership with the Canadian Forces, comprise 183 corps which are supervised jointly by the local branches of the League and by Regular Force officers. Instruction at corps level is carried out by Cadet Instructor List (Sea). Two training establishments, *Cornwallis* on the East Coast and *Quadra* on the West Coast, accommodate officers and 2,700 cadets for two-week training periods in the summer. Under an exchange program, 100 Canadian sea cadets exchange visits with an equal number of United States sea cadets on the East and West Coasts, and 10 exchange with European sea cadets. In addition, 400 selected cadets receive a six-week training course at Canadian Forces bases. Sea experience is provided throughout the year in HMC Ships and Ministry of Transport Ships. As of Jan. 31, 1971, the strength of the corps was 1,016 officers and 10,723 cadets.

**Royal Canadian Army Cadets.**—Supervision of the organization and training of Army cadets is the responsibility of the Regular Force. The training and administration is the responsibility of the officers of the Cadet Instructor List (Army), a sub-component of the Canadian Forces Reserves, and civilian instructors. As of Jan. 31, 1971, officers and civilian instructors numbered 2,603 and there were 38,883 cadets enrolled in 420 corps.

The International Exchange Visits Program gave Army cadets an opportunity to visit and train abroad; 94 cadets went to Jamaica, Barbados, Trinidad and Tobago, Guyana, and Grenada; 16 went to the National Rifle Association matches at Bisley, England, and two officers and 12 cadets attended the Outward Bound Course at Towyn, Wales. Cadets from the Caribbean countries trained at Camp Gagetown, N.B., Valcartier, Que., and Ipperwash Cadet Camp, Ont. One officer and 12 cadets from Britain trained at the National Army Cadet Camp at Banff, Alta., and 16 British cadets participated in the Dominion of Canada Rifle Association matches at the Connaught Ranges near Ottawa. Seven cadets from Canada attended the U.S. Ranger course at Hawk Mountain, Pa., and a similar number of U.S. Rangers attended Banff National Cadet Camp.

In 1971, 4,657 cadets attended six-week trades and specialist courses at Camp Gagetown, in New Brunswick, CFB Valcartier in Quebec, CFB Borden, CFB London and Ipperwash Camp in Ontario, CFB Shilo in Manitoba, CFB Calgary in Alberta and CFB Esquimalt and Vernon in British Columbia; 3,866 cadets attended two-week cadet leader and special camps at Camp Gagetown, Valcartier, Montreal, Ipperwash, Shilo, Churchill and Vernon; 288 master cadets attended the National Army Cadet Camp at Banff for six weeks of training which included mountain marches, rock-climbing and survival.

**Royal Canadian Air Cadets.**—The Air Cadet movement operates on the basis of a partnership between the Air Cadet League of Canada, a voluntary civilian organization, and the Canadian Armed Forces. The League sponsors and administers air cadet activities while the Canadian Armed Forces provide training personnel, syllabi and equipment and also assist the League in organization and administration. The objectives of training are to encourage air cadets to develop the attributes of good citizenship, to stimulate in them an interest in aviation and space technology, and to help them develop a high standard of physical fitness, mental alertness and discipline. The authorized ceiling of cadet enrolment is 30,000; the strength at Jan. 31, 1971, was 26,269 cadets attached to 371 squadrons across Canada.

During the summer of 1971, camps were conducted at CFB Greenwood, N.S., Bagotville, Que., Trenton, Ont., and Penhold, Alta., attended by about 7,500 cadets. A six-week senior leaders' course for 240 cadets, a technical training course for 100 cadets, and a six-week physical training and recreational course for 75 cadets were held at CFB Borden, Ont. A bush-familiarization course, teaching the techniques of survival and ground search, was conducted at Namao, Alta., for 54 cadets. Under the International Exchange Visits Program, 62 air cadets were exchanged with Austria, Belgium, Britain, France, Israel, the Netherlands, Norway, Spain, Sweden, Switzerland, the United States and the Federal Republic of Germany.

About 250 senior air cadets receive flying training annually at flying clubs through Canadian Armed Forces sponsored scholarships; additional scholarships were awarded by the Air Cadet League and other organizations in 1971.

## Section 6.—The Defence Research Board

The Defence Research Board is the agency in the Department of National Defence responsible for scientific research. It was created in 1947 by an amendment to the National Defence Act and consists of a full-time chairman and a vice-chairman, five ex officio members, and a varying number of members selected from universities and industry appointed by the Governor in Council. The ex officio members are the Deputy Minister of National Defence, the President of the National Research Council, the Chief of Defence Staff, the Vice Chief of Defence Staff and the Chief of Technical Services. The Chairman is the chief executive officer of the Board's research organization. He is a member of the Defence Council and the Defence Management Committee, the senior policy and management bodies of the Department, while the Vice Chairman is an associate member of the Defence Management Committee.

The research organization consists of seven research establishments which carry out an intramural program of research specifically oriented toward military needs. The Board also conducts an extramural research program through grants in aid of research to universities. These investigations are usually basic in nature and seek to provide new knowledge in fields from which important military developments are likely to arise. Support is also provided to industry on a cost-sharing basis with the object of promoting and strengthening the applied research.

There are effective arrangements with Canada's allies to ensure mutual use of defence scientific knowledge, resources and facilities. The Board represents Canada on a number of specialist committees through which NATO's scientific endeavours are processed and co-ordinated. The Board maintains liaison offices in Washington, London and Paris.

Research on maritime surveillance problems is carried out at the Defence Research Establishment Atlantic and at the Defence Research Establishment Pacific, the latter also being responsible for related research in the Arctic. Research and development of weapons and defence against various weapons is undertaken in co-operation with the Armed Forces at several establishments, the largest of which is the Defence Research Establishment

Valcartier. Its principal activities include surveillance, night-vision aids and detection devices, lasers, propellants and explosives, aerospace research, weapons systems analysis and studies on armament.

Defence communications studies are carried out by the Communications Research Centre (Department of Communications) on behalf of the Defence Research Board. Research on the defensive aspects of chemical, biological and atomic weapons is carried out at two Defence Research establishments—the Defence Research Establishment Suffield at Ralston, Alta., and the Defence Research Establishment Ottawa; the latter is also responsible for the major northern activities and for power sources.

The Defence and Civil Institute of Environmental Medicine is an amalgamation of the Board's former Defence Research Establishment Toronto and the Canadian Forces Institute of Environmental Medicine, the research and associated facilities being available also to other Federal Government departments and agencies. Its defence program concerns the efficient performance of man in the military role and includes behavioural and bioscience investigations related to all environments. It advises on the physiological and psychological fitness of aircraft crews and on a variety of training projects. Highly specialized assistance in the investigation of accidents in all environments is available both for military and for civil agencies, with particular emphasis on human factors and environmental situations with serious hazard potentials. The Defence Research Analysis Establishment provides scientific evaluation and analysis of present and future weapons systems, tactical doctrine and other aspects of military operations, and studies broad strategic problems.

Thus, the Board continues to support the fields of research that are of foremost interest to the Canadian Armed Forces and the program is under continuing review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and other appropriate departments of government to ensure that research and development activities are closely integrated with production.

### **Section 7.—Canada Emergency Measures Organization**

The Canada Emergency Measures Organization was brought into being to initiate, stimulate and co-ordinate the civil aspects of defence policy delegated to federal departments and agencies to meet the threat of nuclear war on Canada. It is also responsible for providing support and guidance to provincial and municipal authorities in the development of their emergency capabilities.

Plans exist at all levels of government for the provision of emergency arrangements for health services, welfare services, employment of manpower and national resources and for practically every area of endeavour that is required to respond in an emergency situation.

The 1969 Year Book, at pp. 1201-1203, contains details of the establishment, powers and functions of Canada EMO, together with an outline of provincial government civil emergency responsibilities.

### **Section 8.—Defence Construction (1951) Limited**

Defence Construction Limited (DCL) was established in 1950 as a Crown company to contract for major military construction and maintenance projects required by the Department of National Defence. The present company was incorporated in 1951 under the authority of the Defence Production Act. In April 1965, the control and supervision of Defence Construction (1951) Limited was transferred from the Minister of Defence Production to the Minister of National Defence. It is a Crown corporation as defined in Part VIII of the Financial Administration Act and listed in Schedule "C" in the Act (see pp. 158-159).

The delineation of responsibility between the Department of National Defence and DCL is as follows. The Department of National Defence, as owner and the design authority, is responsible for providing DCL with complete plans and specifications as well as funds from which contract payments are made; the technical direction and supervision of the work of design consultants as well as procurement of land, when required, is also provided by the Department. DCL is the contracting and construction supervisory agency. Its function is to obtain tenders, to make recommendations regarding awards and to award and administer major construction and maintenance contracts. Upon request from the Department of National Defence, DCL also engages architects and engineers to prepare plans and specifications in accordance with the requirements of the Department. Contracts are entered into between the contractor or consultant and DCL. As an integral part of its contracting role, DCL is responsible for administration of the contract, supervision of the construction work, certification of the contractors' progress claims for payment and certification that the work has been completed in accordance with the contract and handed over to the Department. The Department of Supply and Services is responsible for payment of contract accounts.

In addition to acting as the contracting agency for major construction for the Department of National Defence, DCL provides assistance, when requested, to other Federal Government departments and agencies relative to construction requirements. It also administers defence construction projects in Canada which are financed by the Government of the United States.

## PART I.—OFFICIAL SOURCES OF INFORMATION

### Section 1.—Books About Canada

This basic list of books about Canada, contributed by the National Library, includes a selection of publications grouped alphabetically by author and arranged under the subject classifications of the Arts and the Performing Arts, Biography, Country and People, Economics, Government and Politics, History, Literature, and General Reference Works. The selection represents many aspects of Canadian life, emphasizes the latest editions of books published within the past three years, and includes titles issued in either or both English and French, accompanied by the publisher's address.

It should be noted that, although this list is an annual feature of the Canada Year Book, it is not a cumulative presentation; it is limited to about 460 titles, necessitating the omission of some items that appeared the preceding year to permit the inclusion of others. For additional titles, the reader should consult the lists of books in earlier Canada Year Books or one or more of the bibliographical collections listed under the heading "General Reference Works", particularly the monthly or annual editions of *Canadiana* published by the National Library.

### The Arts and the Performing Arts/Les arts et les arts d'interprétation

- ADAMSON, Jeremy. *The Hart House collection of Canadian paintings*. Toronto, University of Toronto Press, 1969. 120 p.

## Section 2.—Federal Government Information Services

The preparation and distribution of information on activities of the Federal Government is the responsibility of special divisions operated for this purpose in more than three dozen governmental departments and agencies. Because each of these information divisions concerns itself almost entirely with the functions of its respective branches of government, the Cabinet decided in 1970, upon recommendation of a Task Force which conducted a year-long study of the services, to create a new co-ordinating, advisory and resource unit designated as "Information Canada".

Information Canada's role is not to centralize federal information services, but to assist in offering a better performance and to initiate information programs on subjects dealing with nationhood in general and federalism in particular, which go beyond the interests of individual departments. In addition to providing information to the public through exhibits, booklets and other means used in the past, Information Canada has embarked upon the establishment of a network of inquiry centres in the principal centres of Canada where citizens may seek and obtain data on any aspect of Federal Government operations and other matters pertaining to Canadian society as a whole. It has also been assigned the duty of keeping Parliament and Government advised on a continuing basis of the news and comments Canadians are receiving through the news media, of the public's aspirations and complaints and its attitudes toward federal policies and programs as indicated in surveys, pools and other testing methods.

To help Information Canada perform its function, three components attached to other departments of government in the past have been transferred to it. These are the Publishing Division of the Canadian Government Printing Bureau, the Canadian Government Exhibition Commission and the Still Photo Library of the National Film Board. Their staffs comprise more than two thirds of the personnel of the new organization.

The basic assignment the Cabinet has given to Information Canada, as set out by the Prime Minister in a policy statement on information services to Parliament on Feb. 10, 1970, is one of assistance in "bringing government ever closer to the people" and "expanding the dimensions of democratic dialogue in this nation".

Approximately 400 Information Service Officers are engaged in the gathering and dissemination of information relating to operations of the Federal Government. As many more men and women, while not formally classified as such, perform one form of information function or another, either on a full-time basis or in association with other duties.

Among the information services provided by the Government of Canada, those offered by Statistics Canada are of a particular nature. The bureau is the chief source of statistical information on all phases of the Canadian economy supplied to both the general public and various branches of government at all levels. The operations of the bureau are dealt with in greater detail on pp. 1304-1305.

Citizens with specific inquiries concerning Federal Government programs, policies and other aspects of operation should direct these to the information division of the department of government concerned, either at national headquarters in Ottawa or at regional offices where these exist, or they may seek the data desired through the inquiry offices of Information Canada. Inquiries relating to provincial activities may be directed to the provincial government department concerned.

### Section 3.—Sale of Official Publications

Under the provisions of Order in Council PC 1970-559, responsibility was transferred from the Canadian Government Printing Bureau to Information Canada for the sale of official publications of Parliament and the Government of Canada that are issued to the public (with a few exceptions covered by statute), as well as the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statute to receive them.

Information Canada issues a *Daily Checklist of Government Publications* which records—for the information of the public services, libraries, etc.—Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of such publications receive the *Daily Checklist* without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly lots as requested.

Information Canada also issues the *Monthly Catalogue of Canadian Government Publications*, a comprehensive listing of official publications, public documents and papers not of a confidential nature published at government expense, and an *Annual Catalogue* listing publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

Information Canada is the national sales agent in Canada for publications issued by the United Nations; the United Nations Educational, Scientific and Cultural Organization; the World Health Organization; the Food and Agriculture Organization; the Organization for Economic Co-operation and Development; the International Atomic Energy Agency; the International Civil Aviation Organization; the Council of Europe; the Organization of American States (Pan American Union); the General Agreement on Tariffs and Trade; the New Zealand Government; the International Labor Organization; the World Meteorological Organization; the International Telecommunications Union; and the Assembly of Western European Union.

Publications of the Canadian Government and international organizations listed above may be obtained from Information Canada bookshops located in Halifax, Ottawa, Montreal, Toronto, Winnipeg and Vancouver or by mail from headquarters of Information Canada, 171 Slater Street, Ottawa, K1A 0S9.

### Section 4.—Publication Services of Statistics Canada

Statistics Canada, established by statute in 1918 (as the Dominion Bureau of Statistics) to be Canada's central statistical agency, has become a vast storehouse of current and historical information on almost every kind of Canadian economic and social activity. It conducts the Census of Canada at 10-year intervals (years ending in '1') and five-year intervals (years ending in '6') and, in addition, regularly surveys social and economic change under some 21 broad subject-matter headings. Surveys are conducted monthly, quarterly, annually and as special studies, and the results are published on corresponding bases.

The bureau is a separate department of government reporting to Parliament through the Minister of Industry, Trade and Commerce. Its growth, both in personnel and in complexity of statistical activity, has closely paralleled the development of the nation as a modern and increasingly sophisticated industrial state. The total staff of the bureau, which includes the largest single body of social scientists in one organization in Canada, has more than doubled in the past 15 years to some 3,400 in 1972.

The bureau's statistical collection activities range throughout the nation, from large industrial cities to remote northern areas. The statistics resulting from these activities vary from well-known national aggregates, such as the national accounts, the consumer

price index, and employment and unemployment, to small census detail on urban localities a few city blocks in size. The information produced describes in quantitative terms the economic and social environment, and is used mainly to improve the quality of decision-making and research in the Canadian economy. Basic uses in the public sector are concerned with the development and administration of social and economic policies and programs; uses in the private sector are important and extensive, and are frequently in marketing and merchandising, in connection with the establishment of branch plants, retail outlets and a variety of other projects associated with the generation of economic activity. In addition, uses by business include various types of business research and economic forecasting.

Statistics Canada information is, for the most part, made available to the public in the form of publications although, for more sophisticated users, there is an increasing output in machine-readable form, such as computer tapes and sets of punch cards. In the most recent count, the bureau's publications totalled 1,177. Of these, 114 appear monthly or more frequently, 39 are issued quarterly, 377 annually, and 24 every two or three years. The publications produced as a result of the national census include 278 for 1961 and 122 for 1966; those containing the results of the 1971 Census will begin to appear during 1972. The other 223 publications are issued on an occasional basis and include special studies and manuals associated with statistical activities. These statistical reports are increasingly published in bilingual form or appear in separate English and French editions.

About 1,250,000 copies of Statistics Canada publications are issued yearly on a subscription basis, exclusive of the Statistics Canada Daily and Weekly which contain information in summary and preliminary forms and which have a total distribution of some 1,400,000 copies a year.

The publications program is designed to include the statistical information from each subject area that is most commonly used. However, in response to individual inquiries for more detail than may be contained in a regular publication, a large amount of unpublished information is issued in the form of special tabulations.

In addition to the publications program, there is a very large secondary distribution of statistical information through newspapers, magazines, trade journals, trade associations and radio and television broadcasts. Much Statistics Canada material also becomes part of a wide range of reference publications such as year books and encyclopedias and is incorporated into research studies, in books, learned journals, reports of Commissions of Inquiry, and in a great variety of other public and private documents.

The nature and extent of the bureau's output is made known to the public in several ways. The principal vehicle is the Catalogue of publications which is issued approximately every two years and kept up to date by means of current supplements. The Catalogue and supplements are free on request to Statistics Canada Information Division headquarters (postal address: Statistics Canada, Ottawa, Ont. K1A 0T6). The catalogue lists and describes the publications issued and the machine-readable and unpublished information that are available. Publications are grouped by subject areas; a commodity index has several thousand entries arranged in alphabetical order and cross-referenced where necessary to show the several publications in which information on a given subject may be found.

Statistics Canada publications may be obtained from the bureau headquarters by using the order form supplied with the Catalogue; they may also be obtained through bureau regional offices in St. John's, Halifax, Montreal, Ottawa, Toronto, Winnipeg, Edmonton and Vancouver (listed in city telephone directories under "Government of Canada"). More frequently used publications are also stocked by Information Canada bookstores in principal Canadian cities. Major public and university libraries, provincial libraries and the National Library in Ottawa have Statistics Canada publications available for reference and the bureau's library in Ottawa contains a complete collection of all such publications issued since the bureau was founded.

# DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

NOTE.—In the "Federal Data" column, the major source of information on each subject is given first; other sources follow in alphabetical order, with the exception of the National Film Board and Statistics Canada which appear at the end of each listing with which they are concerned, except where they are the major source.

## PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links the Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

Lamy: to be an additional member, *vice* Donald Murray Thompson. *Oct. 14*, John Harold McDougal Dehler, Ottawa, Ont.: to be again a temporary member for one year from Oct. 15, 1971. *Nov. 25*, Douglas T. McFarlane, Regina, Sask.: to be a temporary member for one year.

## PART IV.—ORDER OF CANADA AWARDS

In 1967, the Centennial of Confederation, there was established a system of honours and awards for Canada. On the recommendation of the Government, Her Majesty Queen Elizabeth the Second approved the issue of Letters Patent establishing a society of honour to be known as "The Order of Canada" for the purpose of according recognition to Canadian citizens and other persons for merit. The Order consists of three awards—the Companion of the Order of Canada, the Medal of Courage and the Medal of Service. The Chancellor and Principal Companion of the Order is the Governor General and nominations for awards are made directly to the Governor General by an Advisory Council composed of the Chief Justice of Canada (Chairman), the Clerk of the Privy Council, the Under Secretary of State, the Chairman of the Canada Council, the President of the Royal Society of Canada and the President of the Association of Universities and Colleges of Canada. Companions of the Order are selected on the basis of "merit, especially service to Canada or to humanity at large" and the maximum number shall never exceed 150. The Medal of Courage is awarded for the performance of "an act of conspicuous courage in circumstances of great danger" and is not, of course, limited to a fixed maximum number. The Medal of Service is awarded for different categories of meritorious service from that for Companions and not more than 50 may be given in any one year.

The first appointments were made on July 6, 1967 by the Governor General in his capacity as Chancellor and Principal Companion of the Order of Canada; they are listed in

the 1969 Canada Year Book at p. 1269, together with subsequent appointments of Dec. 22, 1967, Apr. 30, 1968, June 28, 1968 and Dec. 20, 1968; and in the 1970-71 Canada Year Book at p. 1356 for June 28, 1969, Dec. 20, 1969, June 27, 1970 and Dec. 19, 1970. From the latter date to December 1971, the following appointments were made:—

### June 25, 1971

 Arthur J. GOSSELIN  
 George JACOBSEN  
 Thorvaldur JOHNSON  
 Lieutenant-Colonel James A. JOHNSTON, C.D.  
 Iby KOERNER  
 Paul L'ANGLAIS, C.D.  
 David S. LLOYD  
 Isabel MACNEILL, O.B.E.

Helen G. McARTHUR  
 Reverend William W. MOORE  
 Omer PARENT  
 Jean-Louis ROUX  
 Marion V. ROYCE  
 Chief James SEWID  
 Honourable Walter R. SHAW, M.B.E.  
 Winnifred M. STEWART  
 Jean VANIER  
 Lawrence J. WALLACE  
 Arnold M. WALTER  
 Harry L. WELSH

## PART V.—FEDERAL LEGISLATION, 1970-72

Successive issues of the Canada Year Book carry a continuous record of legislation passed by the Parliament of Canada. Listed here is legislation passed during the Third Session of the Twenty-eighth Parliament, from Oct. 8, 1970 to Feb. 16, 1972. Naturally in summarizing material of this kind it is not possible to convey the full implication of a statute but only to give some indication of its content. The reader who is interested in any specific Act is referred to the *Statutes of Canada* in the given year and chapter.

**Legislation of the Third Session of the Twenty-eighth Parliament,  
Oct. 8, 1970 to Feb. 16, 1972**

Subject, Chapter and Date of Assent	Synopsis
19-20 ELIZ. II	
<b>Agriculture— 1970</b>	
7 Dec. 18	<i>The Canada Grain Act</i> provides for the constitution of the Canadian Grain Commission, for the establishment of grades of western and eastern grain, for the establishment of Grain Standards Committees, for the grading and inspection of grain, for the constitution of grain appeal tribunals, for the licensing of elevator operators and grain dealers, and for the handling and carriage of grain.
<b>1971</b>	
29 Mar. 30	<i>An Act to amend the Crop Insurance Act</i> increases the extended coverage offered under the Act by permitting insurance against loss arising when the planting or seeding of a crop is prevented by excess ground moisture, weather or other agricultural hazards.
54 June 30	<i>An Act to amend the Prairie Grain Advance Payments Act</i> gives the Governor in Council authority to prescribe the rate per bushel in respect of advance payments, to establish on a continuing basis provisions in respect of emergency advance payments for drying grain and to provide for emergency advance payments for unthreshed grain to a producer to a maximum of \$3,000. The application of the Act is extended to rye, flaxseed and rapeseed.
<b>1972</b>	
65 Jan. 12	<i>The Farm Products Marketing Agencies Act</i> provides for the establishment of the National Farm Products Marketing Council to review and advise on all matters relating to the formation and operation of agencies under this Act, with a view to maintaining and promoting an efficient and competitive agriculture industry. The Act also authorizes the establishment of farm product marketing agencies, each to promote a strong, competitive production and marketing industry for the product or products with which it is concerned.
<b>Consumer Affairs— 1970</b>	
6 Dec. 18	<i>The Canada Cooperative Associations Act</i> is an exhaustive statute providing, for the first time, for federal incorporation of co-operatives, which were formerly incorporated either under the federal Companies Act or by special Acts of Parliament. The Act permits co-operative associations to serve their members on a multi-provincial or a national basis and sets down in detail the technicalities of incorporation and operation.
<b>1971</b>	
36 Apr. 7	<i>The Weights and Measures Act</i> revises and consolidates the legislation on weights and measures in Canada, stating in Schedules I and II the basic supplementary and derived units of measurement for use in Canada and definitions and abbreviations for Canadian units of measurement in Schedule II. Regulations concerning the use of units of measurement and devices and the marking of commodities and inspection as well as penalties for offences are given in detail.
39 May 19	<i>The Textile and Clothing Board Act</i> establishes the Textile and Clothing Board, authorized to determine whether imported textile and clothing goods that are the subject of inquiry are being imported in such quantities and under such conditions as to cause or threaten serious injury to the production in Canada of such goods. Reports and recommendations are submitted to the Minister of Industry, Trade and Commerce.
41 June 10	<i>The Consumer Packaging and Labelling Act</i> contains regulations respecting the packaging, labelling, sale, importation and advertising of pre-packaged and certain other products, which are designed to afford greater protection to consumers by way of information on the products they buy.
60 Dec. 23	<i>An Act to amend the Copyright Act</i> confines copyright in records, perforated rolls or other contrivances by means of which sounds are mechanically reproduced, to the reproduction of such contrivances.

**Legislation of the Third Session of the Twenty-eighth Parliament,  
Oct. 8, 1970 to Feb. 16, 1972—continued**

Subject, Chapter and Date of Assent	Synopsis	
<b>Economic Expansion—</b>		
<b>1970</b>		
10 Dec. 18	<i>An Act to amend the Regional Development Incentives Act</i> authorizes provision of a third class of incentive and establishes its maximum as well as the maximum combined development incentive that may be authorized. It provides for a loan guarantee in certain cases and under certain conditions to a person who establishes a new facility or expands or modernizes an existing facility or who establishes a new commercial facility of a prescribed nature and makes other related adjustments.	
<b>1971</b>		
49 June 30	<i>The Canada Development Corporation Act</i> provides for the establishment of the Canada Development Corporation to be administered by a Board of Directors with authority to invest in the shares or securities of corporations. It provides for Federal Government participation in the Corporation by the purchase of shares up to the amount of \$250,000,000 and gives the Minister of Finance authority to advance loans to the Corporation of up to \$100,000,000. The capital stock of certain enumerated corporations owned by the Federal Government may be sold to the Corporation, for which the Government may accept cash, shares or securities of the Corporation.	
<b>Environment—</b>		
<b>1971</b>		
28 Mar. 30	<i>The Canadian National Environment Week</i> states that the second week in October each year shall be kept and observed as Canadian National Environment Week to make people aware of pollution on land, in the air and in the sea, lakes and rivers of Canada.	
47 June 23	<i>The Clean Air Act</i> provides for the establishment, operation and maintenance of a system of air pollution monitoring stations throughout Canada; for the conduct of research and the establishment of demonstration projects; for the collection and publication of data for public information relating to air pollution; and for the establishment of national and specific emission standards and guidelines; and provides for the entering into agreements with provincial governments to formulate, co-ordinate and implement policies and programs for the control and abatement of air pollution.	
57 Oct. 14	<i>An Act to amend the Northwest Atlantic Fisheries Convention Act</i> requires Canadian fishing vessels within the Convention area to permit protection officers of member states of the Northwest Atlantic Fisheries Convention to board and inspect fishing gear and catch and authorizes Canadian protection officers to board foreign fishing vessels for the same purpose. The amendment makes it an offence for the owner or master of a Canadian fishing vessel to fail to permit such inspection.	
59 Dec. 15	<i>The Weather Modification Information Act</i> provides for the obtaining of information respecting weather modification activities.	
<b>Finance—</b>		
<b>1970</b>		
5 Dec. 18	<i>Appropriation Act No. 4, 1970</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1971.	
<b>1971</b>		
25 Mar. 30	<i>Appropriation Act No. 1, 1971</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1971.	
26 Mar. 30	<i>Appropriation Act No. 2, 1971</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1972.	
46 June 23	<i>Appropriation Act No. 3, 1971</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1972.	
58 Dec. 15	<i>Appropriation Act No. 4, 1971</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1972.	
<b>Government—</b>		
<b>1971</b>		
18 Mar. 11	<i>An Act respecting the Electoral Boundaries Readjustment Act</i> changes the name of the electoral district of "Lakeshore" in Ontario to "Toronto-Lakeshore".	

**Legislation of the Third Session of the Twenty-eighth Parliament,  
Oct. 8, 1970 to Feb. 16, 1972—continued**

Subject, Chapter and Date of Assent	Synopsis
<b>Government—concluded</b>	
19 Mar. 11	<i>An Act respecting the Electoral Boundaries Readjustment Act</i> changes the name of the electoral district of "Bonaventure" in Quebec to "Bonaventure-Iles de la Madeleine".
20 Mar. 11	<i>An Act respecting the Electoral Boundaries Readjustment Act</i> changes the name of the electoral district of "Surrey" in British Columbia to "Surrey-White Rock".
21 Mar. 11	<i>An Act respecting the Electoral Boundaries Readjustment Act</i> changes the name of the electoral district of "Beauharnois" in Quebec to "Beauharnois-Salaberry".
22 Mar. 11	<i>An Act respecting the Electoral Boundaries Readjustment Act</i> changes the name of the electoral district of "Bourassa" in Quebec to "Montreal-Bourassa".
38 May 19	<i>The Statutory Instruments Act</i> provides for the examination, publication and scrutiny of regulations and other statutory instruments. The objective of the Act is to protect the public from the improper or unusual exercise of power that has been delegated by Parliament; most proposed regulations must be submitted to the Clerk of the Privy Council who, with the Deputy Minister of Justice, will ensure that they are authorized by statute, that they do not constitute an unusual or unexpected use of the authority to which they are to be made, that they do not trespass unduly on existing rights and freedoms and that the form and draftsmanship are in accordance with established standards.
42 June 10	<i>The Government Organization Act, 1970</i> establishes a Department of the Environment; delineates certain duties of the Minister of Energy, Mines and Resources; places responsibility for astronomical observatories in the National Research Council; provides for Ministries of State; increases the number of Parliamentary Secretaries from 16 to a number equal to the number of Ministers who hold offices listed in the Salaries Act; provides for the appointment of a Postmaster General; provides for improved early retirement benefits for public service employees; and includes a number of other amendments.
44 June 10	<i>An Act to amend the Prime Minister's Residence Act</i> changes the name of the Act to "Official Residences Act". It also makes provision for residences for the Leader of the Opposition and for the Speaker of the House of Commons and for their maintenance and for the appointment of a staff to manage the Prime Minister's residence. Any benefit thus received by the incumbents of these three positions is to be regarded as a living allowance expressly fixed by this Act.
45 June 10	<i>An Act to amend the Senate and House of Commons Act, the Members of Parliament Retiring Allowances Act, and an Act to make provision for the retirement of members of the Senate</i> increases the sessional allowances for members of the Senate and House of Commons and their allowances for expenses incidental to the discharge of their duties, and gives greater authority to the Senate and the House regarding certain expenses to be allowed. Adjustments in contributions and benefits are made in retirement regulations.
<b>Health and Social Services— 1970</b>	
9 Dec. 18	<i>An Act to amend the Old Age Security Act</i> fixes the amount of the old age pension at \$80 a month, effective Jan. 1, 1971; increases, effective Apr. 1, 1971, the maximum supplement that may be paid to a pensioner; permits the payment of a supplement to any pensioner without restriction as to the date of his birth; and provides for annual escalation of the maximum supplement that may be paid in any fiscal year commencing after the year beginning Apr. 1, 1971.
<b>1971</b>	
13 Feb. 11	<i>An Act to repeal the Leprosy Act</i> , which is no longer necessary in the light of present-day medical facilities.
31 Mar. 30	<i>An Act to amend the Pension Act and the Civilian War Pensions and Allowances Act</i> includes a wide range of changes providing for more flexibility in the payment of compensation to disabled veterans or to dependants in case of death. The major changes include the provision of pensions for members of the Hong Kong force and other prisoners of war of the Japanese and to dependants of deceased members, the provision of increased allowances for exceptional incapacity and provision for the payment of pensions or additional pensions for reasons not covered previously. The Act provides for the establishment of an independent Bureau of Pensions Advocates and for two new boards for the hearing of appeals—the Entitlement Board and the Pension Review Board—and for new procedures for the making and hearing of applications for awards.

**Legislation of the Third Session of the Twenty-eighth Parliament,  
Oct. 8, 1970 to Feb. 16, 1972—continued**

Subject, Chapter and Date of Assent	Synopsis
<b>Health and Social Services—concluded</b>	
32 Apr. 7	<i>An Act to amend the Civilian War Pensions and Allowances Act</i> increases the amounts payable for all ranks and ratings in respect of serious or prolonged disability or death caused by a war service injury.
34 Apr. 7	<i>An Act to amend the Pension Act</i> increases the discretionary pension to a parent maintained by a member of the forces to \$804 a year and the pension to each parent where more than one was maintained to \$384 a year. It also provides a 10-p.c. increase in the basic rate for the scale of pensions for disabilities and a like increase in the scale of pensions for death.
35 Apr. 7	<i>An Act to amend the War Veterans Allowance Act, 1952</i> increases the table of allowances under the Act by 15 p.c. and raises the ceiling of the allowances by the same percentage in dollars.
<b>Justice— 1970</b>	
1 Dec. 3	<i>The Federal Court Act</i> continues the court of law, equity and administration in and for Canada, previously existing under the name of the Exchequer Court of Canada, under the name of the Federal Court of Canada with a fundamental change in the court structure, and sets out its constitution, jurisdiction, administration, etc.
2 Dec. 3	<i>The Public Order (Temporary Measures) Act, 1970</i> provides temporary emergency powers for the preservation of order in Canada endangered by elements of the group of persons or associations known as Le Front de Libération du Québec who have resorted to murder, threat of murder, kidnapping and other acts of coercion, intimidation and violence as a means of accomplishing governmental change within Canada with respect to the Province of Quebec or its relationship to Canada. This Act expires on Apr. 30, 1971.
<b>1971</b>	
37 May 19	<i>The Bail Reform Act</i> repeals provisions of the Criminal Code relating to arrest and bail and substitutes new provisions authorizing and governing the issue of appearance notices to and the interim release from custody of persons suspected of having committed a criminal offence, and the interim release of persons who have been convicted of a criminal offence but who have appealed or applied for leave to appeal from the conviction or sentence.
55 Oct. 6	<i>An Act to amend the Judges Act and the Financial Administration Act</i> increases the salaries of judges, makes provision for additional judges and their salaries and makes other amendments respecting compensation for extra judicial services or expenses, annuities, retirement, etc. A Canadian Judicial Council is formed to promote efficiency and uniformity and generally to improve the quality of judicial service.
<b>Labour— 1970</b>	
8 Dec. 18	<i>An Act to amend the Merchant Seamen Compensation Act and to amend an Act to amend the Merchant Seamen Compensation Act</i> broadens the circumstances in which protection is afforded to merchant seamen and their dependants and increases the amounts of compensation payable under the Act for specified reasons.
<b>1971</b>	
48 June 23	<i>The Unemployment Insurance Act, 1971</i> repeals previous legislation with respect to unemployment insurance and presents in detail regulations concerning coverage and administration. It defines and, by regulation, extends insurable employment and increases rates of benefit, and provides for the continuation of the Unemployment Insurance Commission.
50 June 30	<i>An Act to amend the Canada Labour (Standards) Code</i> raises the minimum hourly wage payable to employees aged 17 and over from \$1.65 to \$1.75. Other Parts of the Act provide for the elimination of pay differentials based on sex, establish a right to maternity leave, establish a period of notice in the case of large-scale or individual terminations of employment, and prohibit dismissal solely because an employee is the subject of garnishment proceedings.
56 Oct. 14	<i>The Employment Support Act</i> is an Act to support employment in Canada by mitigating the disruptive effect on Canadian industry of the imposition of foreign import surtaxes or other actions of a like effect.

**Legislation of the Third Session of the Twenty-eighth Parliament,  
Oct. 8, 1970 to Feb. 16, 1972—continued**

Subject, Chapter and Date of Assent			Synopsis
<b>Revenue—</b>			
<b>1970</b>			
11	Dec.	18	<i>The Tax Review Board Act</i> authorizes the establishment of the Tax Review Board to replace the Tax Appeal Board. The duties of the new Board are to hear and dispose of appeals on matters arising under the Income Tax Act, the Canada Pension Plan, the Estate Tax Act and any other designated Act of the Parliament of Canada.
<b>1971</b>			
30	Mar.	30	<i>An Act to amend the Income Tax Act and to amend An Act to amend that Act</i> permits a taxpayer who acquires new prescribed property for use in a manufacturing or processing business carried on by him to claim capital cost allowances in respect of that property on the basis of 115 p.c. of its capital cost to him. It also extends for one year the temporary surtaxes imposed on individuals and corporations.
40	June	10	<i>The Canada-Finland Supplementary Income Tax Convention Act, 1971</i> modifies the Convention entered into between Canada and the Republic of Finland for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income; dividends paid by a company resident in Canada to a company resident in Finland are to be exempt from Finnish tax to the extent that they would have been exempt if both companies had been residents of Finland.
43	June	10	<i>An Act respecting the consolidation of the Income Tax Act in the printed Roll of the Revised Statutes of Canada, 1970</i> has the purpose of preventing such consolidation from coming into force when the Revised Statutes are proclaimed in order that the Income Tax Act (RSC 1952, c. 148) may remain undisturbed until such time as it may be revised by Parliament for the purposes of tax reform.
61	Dec.	23	<i>An Act to amend the Customs Tariff</i> makes certain adjustments to Schedules A and B of the Act.
62	Dec.	23	<i>An Act to amend the Excise Tax Act and the Old Age Security Act</i> makes three amendments to the Excise Tax Act exempting from sales tax machinery and apparatus sold to or imported by manufacturers or producers for purposes of reducing pollution, and margarine and similar spreads, and repealing the special 15-p.c. sales tax on radios, TV sets and electron tubes. The 3-p.c. sales tax imposed as an Old Age Security tax will, in future, be imposed under the Excise Tax Act.
63	Dec.	23	<i>An Act to amend the Income Tax Act and to make certain provisions and alterations in the statute law related to or consequential upon the amendments to that Act</i> is a comprehensive and complex revision of the Canadian income tax system to make it responsive to the economic and social needs of the country.
64	Dec.	23	<i>Income Tax Law Amendment Act, 1971</i> provides that the 7-p.c. corporate tax reduction and the 3-p.c. individual tax reduction be in effect until Dec. 31, 1971 and the amendment to the training-on-the-job program applies to salaries and wages earned on or after Nov. 1, 1971 with an additional deduction from income by a taxpayer for costs incurred under a manpower training program.
<b>Trade—</b>			
<b>1970</b>			
3	Dec.	18	<i>An Act to amend the Anti-dumping Act</i> allows the Anti-dumping Tribunal to inquire into cases of alleged injury from imports which, although not dumped, are said to be unfairly competitive.
<b>1971</b>			
14	Feb.	11	<i>The New Zealand Trade Agreement (Amendment) Act</i> implements an agreement amending the Trade Agreement between Canada and New Zealand.
16	Mar.	11	<i>The Canada-Jamaica Income Tax Agreement Act, 1971</i> implements an agreement for the avoidance of double taxation with respect to income tax between Canada and Jamaica.
23	Mar.	11	<i>An Act to amend the Export Development Act</i> increases the authorized capital of the Export Development Corporation to \$75,000,000 and the amount that the Corporation may borrow from \$750,000,000 to \$1,000,000,000 and provides that the liability of the Corporation under contracts of insurance outstanding shall not at any time exceed \$150,000,000.

**Legislation of the Third Session of the Twenty-eighth Parliament,  
Oct. 8, 1970 to Feb. 16, 1972—concluded**

Subject, Chapter and Date of Assent	Synopsis
<b>Trade—concluded</b> 33 Apr. 7	<i>The Investment Companies Act</i> fills a gap in the pattern of supervision and inspection of financial institutions by establishing a system of reporting and inspection applicable to a class of companies acting as investment intermediaries which are not otherwise effectively supervised, such as sales finance companies and other types that borrow funds for the purpose of making investments and loans. The Act provides for the filing of statements and information, and sets out the qualifications and duties of auditors of such companies and the limitations on transfer of shares. Authority is given for the making of short-term loans to such companies by the Canada Deposit Insurance Corporation.
53 June 30	<i>An Act to amend the Post Office Act</i> includes changes respecting stamp agents' commission, letter mail preparation arrangements with postal customers in return for a reduction of postal rates, payment for extraordinary services rendered to the Canada Post Office, regulations re free transmission of mail for Members of the Senate and the House of Commons, and free postal service to blind persons, etc.
<b>Transportation— 1970</b>	
5 Dec. 18	<i>An Act to amend An Act respecting the Buffalo and Fort Erie Public Bridge Company</i> increases the limit on the borrowing power of the company and extends the date on which its jurisdiction is to be terminated.
<b>1971</b>	
17 Mar. 11	<i>The Canadian National Railways Financing and Guarantee Act, 1970</i> authorizes the provision of moneys to meet certain capital expenditures of the Canadian National Railway System and Air Canada for the period Jan. 1, 1970 to June 30, 1971, and guarantees certain securities to be issued by the CNR and certain debentures to be issued by Air Canada.
27 Mar. 30	<i>An Act to amend the Canada Shipping Act</i> provides for the establishment, from the Consolidated Revenue Fund, of a Maritime Pollution Claims Fund and for the appointment of an Administrator of that Fund. It authorizes the making of regulations prohibiting discharge of pollutants from ships and the appointment of pollution control officers and analysts, and provides for civil liability resulting from the discharge of pollutants and the assessment of income losses by fishermen.
51 June 30	<i>The Fort-Falls Bridge Authority Act</i> establishes a Bridge Authority to construct, maintain and operate a bridge across the Rainy River between Fort Frances, Ontario, and International Falls, Minnesota.
52 June 30	<i>The Pilotage Act</i> replaces former legislation with respect to pilotage, bringing it into line with modern requirements. The objective of the Act is to provide the greatest possible degree of safety for ships moving through Canadian coastal and inland waters. It decentralizes the powers and functions of pilotage by establishing four regional authorities—Atlantic, Laurentian, Great Lakes and Pacific—with the power to make the regulations necessary to carry out their functions.
<b>Miscellaneous— 1971</b>	
12 Feb. 11	<i>An Act to amend the Emergency Gold Mining Assistance Act</i> extends the application of the Act to June 30, 1973.
15 Feb. 11	<i>The Statistics Act</i> repeals the former Statistics Act replacing it with modernized legislation respecting the collection of statistics. The statistics bureau, to be henceforth known as "Statistics Canada", is to be administered by the "Chief Statistician of Canada". The duties of the bureau remain basically the same; the amendments bring them into line with present-day requirements.
24 Mar. 11	<i>An Act to amend the Farm Improvement Loans Act, the Small Businesses Loans Act and the Fisheries Improvement Loans Act</i> authorizes the continuation of the terms of these Acts for an additional three-year loan period commencing July 1, 1971 and ending June 30, 1974. The aggregates of the principal amounts of all guaranteed loans that may be made by all lenders during this period were, respectively: \$900,000,000 for banks and \$300,000,000 for all other lenders; \$200,000,000 for banks and \$100,000,000 for all other lenders; and \$20,000,000 for banks and \$10,000,000 for all other lenders.

## PART VI.—CANADIAN CHRONOLOGY

Events in the general chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49; from 1867 to 1953 in the 1954 Year Book, pp. 1259-1264; and annually from that year in successive editions. The following listing covers the year 1971 and it should be mentioned that certain of the dates given therein are approximate. Acknowledgement is given to the publication *Canadian News Facts*, Toronto, for very valuable assistance in the preparation of this chronology. References regarding changes in federal and provincial legislatures or ministries are not included but may be found in Chapter II on Constitution and Government or in Appendix I.

## 1971

**January:** *Jan. 1*, Federal regulations covering standards for snowmobile design and construction came into effect; lights, braking power and registration number are specified. *Jan. 4*, Paul and Jacques Rose, Francis Simard and Bernard Lortie found criminally responsible for the death of former Quebec Labour Minister Pierre Laporte; charged Jan. 5 with kidnapping and non-capital murder. Three-month armed guard in effect in Montreal officially ended with withdrawal of troops. *Jan. 6*, The Defence Research Board at Ottawa announced plans to build a furnace at Suffield, Alta., to burn stocks of DDT; no harmful substances to be emitted. *Jan. 7*, The Department of Finance announced that the Mercantile Bank of Canada, owned by New York interests and previously permitted to grow only in relation to its transfer of ownership to Canadian interests, would begin a 10-year program to ensure at least 75-p.c. Canadian ownership by the end of 1980. *Jan. 8*, Death of James A. Gairdner, Oakville, Ont., financier and philanthropist, who established the Gairdner Foundation Awards for outstanding achievements in medicine. Michel Chartrand, Montreal labour leader, charged with seditious conspiracy and membership in the FLQ, sentenced to a year in jail for contempt following abusive verbal attacks against Mr. Justice Roger Ouimet. *Jan. 9*, The Federal Government announced provision of \$2,250,000 to agencies engaged in relief activities on both sides of the civil war in Nigeria. *Jan. 11*, David George Greeyes appointed the first Indian regional director of the Alberta division of the Department of Indian Affairs and Northern Development. *Jan. 14*, Report of a six-year study of the pollution problem by the International Joint Commission tabled in the House of Commons and released in Washington, D.C.; recommendations included wide powers to deal with pollution in the lower Great Lakes and the International Section of the St. Lawrence River. *Jan. 14-22*, Conference of heads of government of the Commonwealth held in Singapore; a major topic of discussion was the proposal of Britain to lift an arms embargo on South Africa; Prime Minister Trudeau credited with helping prevent a breakup of the Commonwealth and with effecting a temporary compromise in the establishment of a study group of eight nations. *Jan. 18*, The Quebec Government announced official adoption of regulations under which English-language schools in the province must teach French as a second language. *Jan. 19*, The House of Commons Public Accounts Committee gave renewed permission to Auditor-General Maxwell Henderson to report non-productive payments made by government departments. *Jan. 20*, Radio Tuktoyaktuk, N.W.T., went on the air for the first time, broadcasting in Eskimo and English. *Jan. 21*, Opening of the centennial-year session of the British Columbia legislature marred by demonstrations of unemployed persons. Mrs. Betty Kennedy, Toronto broadcaster, appointed the first non-medical associate member of the complaints committee of the College of Physicians and Surgeons of Ontario. *Jan. 22*, Betsy Clifford of

Canada, world giant slalom champion, won the top honours at the International Golden Key ski meet held at Schruns, Austria. *Jan. 23*, *The Economic Atlas of Ontario*, initiated by the Ontario Department of Trade and Development and edited by Professor W. G. Dean of the University of Toronto, chosen Book of the Year at the Leipzig International Book Fair in competition with entries from 27 countries, and awarded the only Gold Medal of the Fair. Karen Magnussen of Vancouver successfully defended her title of Canadian senior women's figure skater, and Toller Cranston of Toronto won the Canadian senior men's title. *Jan. 24*, A natural gas well on King Christian Island, burning out of control since Oct. 25, 1970, successfully capped by Panarctic Oils Ltd. *Jan. 30*, The United Church of Canada reinstated Rev. Russell Horsburgh, who resigned from the ministry in May 1965 following charges of contributing to juvenile delinquency. *Jan. 30-Feb. 9*, The U.S. spacecraft *Apollo XIV* on successful flight to the moon, carrying astronauts Alan Shepard, Edgar Mitchell and Stuart Roosa.

**February:** *Feb. 1*, The Post Office Department inaugurated an "assured mail-delivery program", providing next-day delivery of letters mailed before 11 a.m. in most major Canadian cities. The Canadian Transport Commission rejected application by the CP Rail to reduce its daily transcontinental passenger service. A Quebec Press Council, possibly the first of its kind in Canada or the U.S., established by four news organizations representing more than 700 reporters. *Feb. 2*, Death in Victoria of Dr. George Brock Chisholm, former federal Deputy Minister of Health and first Director-General of the World Health Organization. *Feb. 3*, The International Joint Commission reported that air pollution in the St. Clair and Detroit River areas has reached the point where it is detrimental to the health, safety and property of residents. *Feb. 4*, Death in London, Ont., of William (Billy) Mills, last surviving participant in the 1885 Riel Rebellion, aged 104. *Feb. 4-6*, The 1971 North American Figure Skating Championships held in Peterborough, Ont.; Karen Magnussen of Vancouver won the women's title. *Feb. 8-9*, At a federal-provincial conference of Premiers held in Ottawa, agreement was reached on a feasible formula for amending the Constitution. *Feb. 9*, Report of the inquiry into the July 5, 1970, Air Canada crash near Toronto that took the lives of 109 persons tabled in the House of Commons; premature deployment of a landing-brake system found to be the cause, and blame was attributed to members of the aircraft crew, the aircraft manufacturer, Air Canada and the Ministry of Transport. *Feb. 10*, The Federal Government announced the limiting of the 1971 Atlantic seal hunt in the Gulf of St. Lawrence and off Newfoundland and Labrador to 245,000 harp seals. *Feb. 12*, Sedition charges against five men prominent in the separatist cause in Quebec—Michel Chartrand, Robert Lemieux, Jacques Larue-Langlois, Pierre Vallières and Charles Gagnon—quashed by Mr. Justice Roger Ouimet. *Feb. 12-21*, Second Canada Winter

Games held in Saskatoon; Ontario won 93 and British Columbia 64 of the 317 medals awarded. *Feb. 13*, Ontario Minister of Education Davis chosen leader of the provincial Progressive Conservative Party and Prime Minister of Ontario, succeeding retiring Prime Minister Robarts. *Feb. 15*, Death in Toronto of Rev. Ronald MacLeod, a key figure in the formation of the United Church of Canada in 1925 and the first minister in Canada to broadcast church services and sermons on radio. Britain converted to decimal system of currency. *Feb. 23*, South Africa ordered Wasp helicopters from Britain, thereby endangering the eight-nation group set up at the suggestion of Prime Minister Trudeau to investigate the controversial arms sale; Nigeria withdrew from the committee. *Feb. 24*, *Feb. 25*, First incident of hijacking a foreign aircraft to Canada; Chapin Scott Paterson, a U.S. citizen who ordered a Boeing 747 to Vancouver, turned over to U.S. authorities the same day. *Feb. 26*, The Federal Government announced a new program of bilingualism in the Canadian Armed Forces, to attain an eventual 28-p.c. Francophone representation.

**March:** *Mar. 2*, The Canadian Transport Commission disallowed the discontinuance of CN's *Super Continental* passenger service despite its continued financial losses. *Mar. 3*, External Affairs Minister Sharp announced federal plan to employ students in summer pollution cleanup. *Mar. 4*, Prime Minister Pierre Elliott Trudeau and Margaret Sinclair of Vancouver were married in North Vancouver, B.C. Winners of the Governor General's literary awards for 1970 announced by the Canada Council: David Godfrey (fiction in English); Monique Bosco (fiction in French); Jacques Brault (drama in French); Fernand Ouellette (non-fiction in French); B. P. Nicol (poetry in English); and Michael Ondaatje (non-fiction and poetry in English). Severe blizzard causes emergency conditions in Quebec; Montreal virtually isolated by 20 inches of snow. *Mar. 5*, The Federal Government announced the sealing off of Canadian ocean fishing waters adjacent the East and West Coasts; only nations holding traditional rights may continue to exercise them. *Mar. 8*, Death in Montreal of Gordon R. McGregor, wartime fighter ace and former president of Trans Canada Airlines. *Mar. 9*, The Royal Commission on Bilingualism and Biculturalism announced that it would end its mandate without presenting a final report; changing circumstances, outdated material and other developments were given as reasons for inability to reach concrete conclusions. *Mar. 10*, Breathalyzer tests in New Brunswick, suspended early in January, resumed following a ruling by the New Brunswick Supreme Court that the legislation was "workable, provided certain procedures are followed"; stricter guidelines announced in the Legislature. *Mar. 17*, *Mar. 11*, Energy, Mines and Resources Minister Greene announced that the Federal Government would consider taking control of the financially distressed Home Oil Co. Ltd. of Calgary, the last major petroleum company in Canada still owned mainly by Canadians which was planning to transfer controlling interest to a U.S. company in the absence of a Canadian buyer; Consumers' Gas Co. of Toronto agreed. *Apr. 22* to purchase a controlling interest in the company. *Mar. 12*, Justice Minister Choquette of Quebec announced that the Quebec Government will compensate those unjustly arrested during the October kidnap crisis, and that files, fingerprints, etc., would be destroyed. *Mar. 13*, Paul Rose found guilty of the murder of Quebec Labour Minister Pierre Laporte on Oct. 17 1970 and sentenced to life imprisonment. *Mar. 16*, Prime Minister Trudeau announced that \$57,800,000 would be spent to provide jobs and activities for 1,800,000 high school and university students during the coming summer. The Ontario Government initi-

ated a \$25,000,000 suit against Dow Chemical of Canada Ltd. for ecological damage to parts of the Great Lakes system. *Mar. 17*, Final volume of the report of the Prevost Commission of Inquiry into the administration of justice in Quebec tabled in the Quebec Assembly; recommendations included the giving of greater protection to individuals against encroachment by police, courts and prisons. *Mar. 19*, The fourth of five volumes of the Report of the Royal Commission on Pilotage, established in 1962, released. *Mar. 21*, Death in St. Boniface, Man., of former Senator Arthur L. Beaubien. *Mar. 22*, The Federal Government announced the allocation of about \$2,000,000 to hire 276 Francophone university graduates for the public service, to be employed in 10 departments in "positions where French is the language of work". *Mar. 24*, Report of the Quebec Police Commission into the 16-hour walkout Oct. 7, 1969, of the Montreal police, tabled in the Quebec Assembly; recommendations included the formation of a permanent plan to deal with "any eventuality", and the division of the Montreal Policemen's Brotherhood into separate units for officers and men. Retirement of Walter M. Aseltine of Saskatchewan from the Senate. *Mar. 26*, Death in Toronto of Nathan Cohen, well-known writer, broadcaster and theatre critic. *Mar. 29*, The Massey Medal for 1971 presented to Dr. J. Lewis Robinson, geographer, in recognition of his scholarship and contributions to knowledge of Canada, by Governor General Michener. Ralph E. Collins, an External Affairs Department official who was born in China and speaks the Chinese language, appointed Canada's first Ambassador to the People's Republic of China. *Mar. 30*, Retirement of Malcolm Hollett of Newfoundland from the Senate. *Mar. 31*, Retirement of James Gladstone, the first treaty Indian appointed to the Senate.

**April:** *Apr. 1*, The newly formed Law Reform Commission of Canada, under the chairmanship of Mr. Justice Patrick Hart of the Ontario Supreme Court, began a five-year re-evaluation of the principles underlying the criminal law process in Canada. *Apr. 2*, Robert Lemieux, FLQ lawyer, acquitted of a charge of obstructing justice, for lack of witnesses or proof. *Apr. 4*, Death in Vancouver of Maj.-Gen. Victor Wentworth Odium, distinguished Canadian soldier and diplomat. *Apr. 5*, A nation-wide railway strike averted when agreement was reached on a new three-year contract between engineers and the two major railways. Quebec's Gentilly nuclear power station near Trois-Rivières came into service—the first in the world to have a reactor fuelled with natural uranium and cooled by ordinary water. *Apr. 8*, The Federal Government announced its decision to withdraw from economic development or disposal an 870-sq. mile area along the South Nahanni River in the Northwest Territories pending a feasibility study on creating a national park there. *Apr. 10*, Death in Toronto of Manly Edward MacDonald, internationally known Canadian landscape artist. *Apr. 13*, The annual \$50,000 Royal Bank Award presented to Arthur Erickson of Vancouver, architect, designer of the Canadian pavilion at Expo '70 in Japan, Simon Fraser University in Burnaby, B.C., the Bank of Canada building in Ottawa, and others. The Toronto Maple Leafs and the New York Rangers hockey clubs and some of their players assessed heavy fines totalling \$16,500 for fighting on the ice during a game in New York. *Apr. 15*, Appointment of Dr. Harry Douglas Smith, former President of University of King's College in Halifax, as Nova Scotia's first ombudsman. *Apr. 18*, Four-day rebellion of 500 prisoners at Kingston penitentiary ended with the release of five guards held as hostages; 11 convicts were injured and one killed during the violence. *Apr. 19*, Dr. Charles Best, co-discoverer with the late Sir Frederick Banting of insulin in

the treatment of diabetes, honoured by the Royal Society in London, Eng., on the 50th anniversary of the discovery of insulin. Sierra Leone, a former British colony and protectorate that became an independent member of the Commonwealth in 1961, declared a republic. *Apr. 20*, Canada and the United States signed an agreement on a \$15,000,000 space satellite experiment to be launched in 1974; expected to cut the high costs of ground stations and put reception within financial reach of small, isolated communities. Death in Halifax of Hon. Henry P. MacKeen, Lieutenant-Governor of Nova Scotia from 1963 to 1968. *Apr. 22*, The 48-page diary of Louis Riel, metis leader, written during the 1885 Battle of Batoche, bought at auction in Montreal by Gene Rheame, former Canadian Member of Parliament, for \$26,500, with the intention of its remaining in Canada as a public document. *Apr. 24*, David Lewis elected national leader of the New Democratic Party, succeeding T. C. Douglas. *Apr. 25*, Three Soviet cosmonauts completed a space flight in *Soyuz 10*, docking with the unmanned scientific workshop *Salut* to test a docking collar for possible use in building long-term orbital space platforms. *Apr. 29*, Hon. Eric Kierans resigned as Minister of Communications in the Federal Cabinet, in protest against the Government's economic policies. *Apr. 30*, The Federal Government allowed the Public Order (Temporary Measures) Act, brought into force Dec. 3, 1970, to lapse, and announced the establishment of a special joint Commons-Senate committee to draft a new law against terrorism. Leaders of the 13-day occupation of Sir George Williams University in 1969 and the destruction of its computer (one from Barbados and one from Dominica) sentenced to jail and fined. Quebec Prime Minister Bourassa announced plans for a \$6,000,000,000 hydro-electric power project to be constructed in the James Bay area—the largest such project so far undertaken in the Western Hemisphere.

**May:** *May 1*, New Statistics Act proclaimed; the Dominion Bureau of Statistics to be henceforth known as Statistics Canada, and the Dominion Statistician as Chief Statistician of Canada. *May 3-12*, H.M. Queen Elizabeth II, H.R.H. The Duke of Edinburgh and H.R.H. Princess Anne visited British Columbia in celebration of that province's 100th anniversary of entry into Confederation. *May 4*, A portion of the town of St. Jean Vianney, Que., was lost in a landslide that destroyed 36 homes and took 31 lives; the town and part of the neighbouring town of Shipshaw were closed permanently on May 27 and most of the inhabitants were to be relocated at Arvida or elsewhere. *May 13*, The Federal Government announced plans for the construction of a STOL airport in the centre of Montreal to link that city with a similar facility in Ottawa by the use of 14-passenger aircraft flying a 15- to 30-minute cycle. *May 15*, Death in Newbliss, Ireland, of Sir Tyrone Guthrie, world-renowned playwright and first artistic director of the Stratford Festival of plays inaugurated in 1954 in Stratford, Ont. *May 17-28*, Prime Minister and Mrs. Trudeau and a 21-member official party visited the U.S.S.R.; protocol signed providing for consultation and co-operation in economic, scientific and cultural spheres as well as political consultation, and the common problems of northern development discussed. *May 18*, The Montreal Canadiens won the Stanley Cup, symbol of hockey supremacy, over the Chicago Black Hawks in a best-of-seven series, the 10th Stanley Cup for the Canadiens in 15 years. The Federal Government made formal protest in Washington over the chasing of a Canadian fishing vessel by a U.S. Coast Guard cutter May 16, claiming the Canadian vessel was in Canadian waters at the time. Final report of the Barber Royal Commission on Farm Machinery, established in 1966, tabled in the House of Com-

mons; recommendations included the establishment of an independent agency to test and develop farm machines and the elimination of certain producer-dealer financing arrangements. *May 20*, Francis Simard of Montreal sentenced to life imprisonment for the murder of former Quebec Labour Minister Pierre Laporte. *May 21*, A special report to the Canadian Transport Commission on coastal shipping tabled in the House of Commons; recommendations included a "policy of Canadianization", which would require Canadian-flag vessels to handle all coastal shipping in areas where foreign competition is now permitted, and an extension of the definition of coastal shipping to include other forms of marine activity. Hon. Paul Hellyer resigned from the Liberal caucus to sit in Parliament as an Independent Liberal in protest against government policies. *May 22*, Official opening of Ontario Place, the \$23,000,000 provincial showplace constructed on the shore of Lake Ontario at Toronto. The Norwegian cruise ship *Meteor*, en route to Vancouver, caught fire in the Strait of Georgia; 32 crew members killed. *May 25*, A nation-wide citizens' political movement, Action Canada, launched by Paul Hellyer in attempt to exert pressure on the Federal Government on matters of tax cuts, unemployment, wage and price guidelines, etc. *May 28*, Announcement of award by H.M. Queen Elizabeth II of the distinctive Order of Merit to Rt. Hon. Lester B. Pearson, former Prime Minister of Canada; Dr. Wilder Penfield, Montreal neurosurgeon, is the only other Canadian recipient.

**June:** *June 1*, Thirteen prisoners charged with non-capital murder in the deaths of two other prisoners as a result of the April riot at Kingston penitentiary, one of whom, together with five others, was also charged with kidnapping six guards; one charge dismissed, five sentenced Aug. 27 to three years in addition to their present terms for forcible seizure of guards. *June 4*, Report of a special all-party Commons committee tabled in the House of Commons recommended firm limits on campaign spending by individual candidates and also by parties in federal elections. *June 8*, The largest commercial ship-building contract in Canadian history was announced at Sorel, Que., by Marine Industries Ltd. and two shipping firms in France; a federal subsidy of \$21,000,000 plus moderate government credit terms aided in the agreement. *June 9*, Legislation passed in the House of Commons establishing the Canada Development Corporation, to help develop and maintain strong Canadian-owned and -managed corporations in the private sector and to provide greater opportunities for Canadians to invest in the economic development of Canada. *June 10*, Royal Assent given to legislation providing for the establishment of a Department of the Environment, the appointment of Ministries of State and a Postmaster General, and other Federal Government organization changes. *June 11*, Canada and the United States agreed in principle on joint effort to combat pollution in the Great Lakes. *June 12*, Dr. Charles Best, co-discoverer with the late Sir Frederick Banting of insulin in the treatment of diabetes, made a Companion of Honour in the Queen's birthday honours list. *June 14*, Michel Viger of St. Luc, Que., sentenced to eight years in penitentiary for his part in hiding Jacques and Paul Rose and Francis Simard, convicted murderers of Pierre Laporte. *June 14-17*, Federal-provincial conference on the Constitution held in Victoria; a proposed constitutional charter released following the conference was rejected June 23 by Quebec Prime Minister Bourassa because it did not give Quebec "legislative primacy" in the field of income security. *June 15*, Death in Toronto of Very Rev. George Campbell Pidgeon, first Moderator of the United Church of Canada. *June 18*, C. Stafford Smythe and Harold Ballard of Toronto arrested on charges of theft and fraud

involving funds of Maple Leaf Gardens. *June 19*, The Queen's Plate, Canadian thoroughbred classic at Woodbine race track, won by Kennedy Road, owned by Mrs. Arthur Stollery of Toronto. *June 21*, The Ontario Government advanced the first \$351,000 of a \$961,000 loan to the publishing firm of McClelland and Stewart Ltd. to help keep the firm under Canadian control. *June 23*, General Election held in Saskatchewan; New Democratic Party led by Allan Blakeney defeated the Liberal government of Premier Thatcher, winning 45 of the 60 seats in the legislature. A new Unemployment Insurance Act received Royal Assent, increasing coverage and rates of benefit; the Federal Government is required to more than double its present level of contributions to the unemployment insurance account. *June 24*, Dr. Charles Best, co-discoverer with the late Sir Frederick Banting of insulin in the treatment of diabetes, chosen first winner of the Pan American Prize, awarded by the São Paulo Biennial Foundation of Brazil. *June 25-July 3*, Visit of Diori Hamani, President and H. E. Mai Maigana, Secretary of State of Niger, to Canada. *June 24*, The Federal Government announced a \$1,500,000-program to compensate Canadian fishermen and processors for mercury contamination of fish in Atlantic and inland waters.

**July:** *July 1*, Centennial of the Province of British Columbia celebrated; Prime Minister Trudeau presented gifts from the "people of Canada" of a \$2,500,000 museum to house native artifacts on the campus of the University of British Columbia and a \$4,500,000 "Second Century Fund" to develop natural conservation areas in the province. *July 2*, Premier Chou En-lai of the People's Republic of China received the first Canadian ministerial mission ever to visit that country; results of the mission include China's participation in the Canadian National Exhibition in Toronto and Canada's presentation of a trade fair in Peking in 1972, and potential air agreement and greater trade between the two countries. *July 12-13*, Federal-provincial conference of Finance Ministers held in Ottawa, at which federal concessions included extension of equalization payments to the provinces, two-year continuation of federal post-secondary education aid and consideration of extension of the guarantee of no loss in provincial revenues following the coming into force of the new federal income tax program. *July 13*, The Federal and Ontario Governments announced agreement for development, as a semi-wilderness area, of Pukaskwa National Park on the north shore of Lake Superior; to be the largest national park in Eastern Canada. *July 14*, Legislation passed in Quebec establishing a Crown corporation to oversee development of the James Bay power project. *July 23*, The first Ambassador to Canada of the People's Republic of China, Huang Hua, arrived in Ottawa. Appointment announced of Robert B. Bryce, former Deputy Minister of Finance and a senior public servant and adviser to five Prime Ministers, as Canadian Director of the International Monetary Fund. *July 24*, Death in Regina of W. Ross Thatcher, former Premier of Saskatchewan. *July 26*, Legal action, initiated Feb. 2 against the Ontario Securities Commission on behalf of the 3,400 Ontario investors who lost heavily when Prudential Finance Corp. Ltd. collapsed in November 1966, refused by a Justice of the Ontario Supreme Court because the Commission is not an entity which can be sued for damages in its own name. *July 26-31*, U.S. spacecraft *Apollo XV* on successful flight to the moon, carrying astronauts David Scott, James Irwin and Alfred Worden and the first vehicle to travel on the moon surface. *July 29*, The schooner *Bluenose II*, replica of the famed racing schooner *Bluenose*, presented to the Nova Scotia Government by the Oland family of Halifax; to be reconditioned and put to sea as a floating attraction or berthed as a permanent museum.

**August:** *Aug. 5*, Conference of provincial premiers opened in Victoria; agreement that priority be given to environmental questions by the Council of Resource Ministers at their meeting in September. *Aug. 13*, Various charges laid under the War Measures Act against 32 persons, including labour leader Michel Chartrand, lawyer Robert Lemieux and teacher Charles Gagnon, were suspended by the Crown. The sixth Pan-American Games closed in Cali, Colombia, after 14 days of competition in 20 sports; Canadian competitors came third after the United States and Cuba with 19 gold and 20 silver medals, and first with 42 bronze medals. The Federal and Ontario Governments announced a \$262,000,000 four-year program to clean up pollution in Lake Erie, Lake Ontario and the international section of the St. Lawrence River, a preliminary to a formal agreement between Canada and the United States for clearing the Great Lakes of pollution. *Aug. 15*, U.S. President Nixon announced new economic policies, including a special import surcharge of up to 10 p.c. on all dutiable goods, a 90-day wage, price and rent freeze, new tax incentives for industry and, in effect, a floating of the U.S. dollar, a surcharge that would have serious impact on Canada's exports to the U.S.; Canada made representations to the U.S. without success. *Aug. 15-21*, The first Banff Festival of the Arts held, marking the culmination of nearly 40 years of effort in developing the Banff School of Fine Arts to its present high standard. *Aug. 16*, Hurricane Beth caused severe flooding and torrential rains, combined with winds up to 70 miles an hour, and resulted in extensive damage to Nova Scotia's coastal areas. Saskatchewan applied for federal aid for farmers whose crops were damaged by an infestation of Bertha army worms; about 1,250,000 acres in the Prairie Provinces were affected and 35 persons poisoned from using the chemical Lannate, the effects of which are of short duration in comparison with those of DDT. *Aug. 17*, The Federal Government announced creation of 457 French-speaking units in the public service—one of the recommendations of the Royal Commission on Bilingualism and Biculturalism; about 29,000 public servants to be placed in these units. Death in Halifax of Senator Earl W. Urquhart of Nova Scotia. *Aug. 24*, The Federal Government released its White Paper on Defence; highlights included Armed Forces aid in civil emergencies, expanded assistance in surveillance of coastal waters in pollution control off the coasts, policing of territorial seas and fishing zones and maintenance of Canada's NATO forces at present strength. *Aug. 26*, Report of the Special Committee on Youth, conducted for the Department of the Secretary of State, released; recommendations including disbanding the Company of Young Canadians, greater federal voice in education, elimination of the cadet program and legalization of marijuana. *Aug. 27*, The Canadian Transport Commission ruled that U.S. charter aircraft flying into northwestern Ontario must now land at a licensed tourist resort or air base upon entry and at a Canadian customs post on the return flight. *Aug. 30*, General Election held in Alberta; the Progressive Conservative party led by Peter Lougheed defeated the government under Premier Harry Strom, ending 36 years of Social Credit government; party standing, 49 Progressive Conservative, 25 Social Credit and 1 New Democratic Party. *Aug. 31*, Premier Davis of Ontario announced that provincial grants would not be extended to Grades 11, 12 and 13 in the Roman Catholic Schools.

**September:** *Sept. 1*, The British Columbia law banning alcohol and tobacco advertising went into effect. *Sept. 4*, Death in Fernie, B.C., of Senator James Gladstone, first Canadian treaty Indian representative in the Upper House. *Sept. 6*, Death in Montreal of Dr. Phil Edwards, medical authority on tropical and chest diseases and one of

Canada's most noted runners, having won five bronze medals at the 1928, 1932 and 1936 Olympics. *Sept. 7*, Regina, Sask., inaugurated public transit service allowing customers to telephone for bus service to their doors. *Sept. 8*, Col. R. S. McLaughlin, Chairman of the Board of General Motors Canada Ltd. and a pioneer of the Canadian automobile industry, celebrated his 100th birthday in Oshawa. Gordon Howe, native of Floral, Sask., and famed hockey star of the Detroit Red Wings, retired from professional hockey. *Sept. 10*, Completion of the extension of the British Columbia Railway from Fort St. John to Fort Nelson officially marked by Premier Bennett. *Sept. 11*, Death of Nikita S. Khrushchev, former Premier of the U.S.S.R. *Sept. 13*, Ontario announced free hospital and medical care for persons aged 65 and over beginning Jan. 1, 1972 (extended Sept. 25 to their dependants) and for low-income earners beginning Apr. 1, 1972. Ontario announced a capital aid program to help save Ontario-based Canadian publishing firms from foreign ownership. *Sept. 15*, Two university students employed as the first female pages in the Senate. *Sept. 16*, Death in Ottawa of Frank H. Underhill, noted historian, political thinker and former professor at the Universities of Saskatchewan and Toronto. *Sept. 18*, John Bassett, publisher of *The Telegram* in Toronto, Canada's fourth largest newspaper, announced that, after 95 years, publication would cease. *Sept. 18-Nov. 6*, A series of protests against the proposed U.S. plan to detonate a five-megaton nuclear weapon underground on Amchitka in the Aleutian Islands; no major developments as a result of the blast were reported. *Sept. 21*, The major Canadian cigarette manufacturers announced cessation of broadcast advertising Jan. 1, 1972. *Sept. 22*, Bernard Lortie found guilty of kidnapping Pierre Laporte, former Quebec labour minister; sentenced Nov. 22 to 20 years in prison plus six months for contempt of court. *Sept. 25*, The International Typographical Union announced the end of its seven-year strike against three Toronto newspapers, *The Star*, *The Telegram* and *The Globe and Mail*. *Sept. 28*, Federal legislation passed to subsidize manufacturers and processors whose exports are threatened by the U.S. surcharge, to remain in effect for the life of the surcharge.

**October:** Visit to Canada of the Archbishop of Canterbury, the Most Rev. Arthur Michael Ramsey. *Oct. 1*, At the 23rd annual Canadian Film Awards, the National Film Board won 19 of 39 awards; best feature film was *Mon Oncle Antoine*, which took seven other awards. Agreement reached between the Governments of Canada and Quebec recognizing and specifying Quebec's role in the international Agency for Cultural and Technical Co-operation of French-speaking Countries. *Oct. 2*, Death in Fredericton of Hon. Wallace S. Bird, Lieutenant-Governor of New Brunswick. *Oct. 4*, Announcement of discovery of crude oil, condensate and natural gas on Sable Island, 175 miles east of Halifax. *Oct. 6-10*, Visit to Ottawa of Prime Minister Tun Abdul Razak of Malaysia and senior Malaysian officials for discussion of bilateral and international issues of mutual interest. *Oct. 7*, The Federal Government announced complete reform of the Canadian penitentiary system, stressing the rehabilitation of prisoners rather than the protection of society. *Oct. 8*, The Federal Court of Canada ruled that an Indian woman cannot be deprived of her rights as an Indian because of her marriage to a non-Indian; the first time a Canadian court has applied the 11-year-old Bill of Rights to the issue of sexual equality. *Oct. 10*, Real Caouette re-elected leader of the Social Credit Party in Canada. *Oct. 11*, Death in Ottawa of Hon. James D. Hyndman, distinguished judge and public servant. *Oct. 13*, Death in Toronto of Stafford Smythe, President of Maple Leaf Gardens Ltd. *Oct. 13-14*, The 2500th anniversary of the Persian

Empire celebrated in Persepolis, Iran; Canada represented by Governor General Michener and Mrs. Michener. *Oct. 14*, The Federal Government announced a 3-p.c. reduction in personal income taxes and a 7-p.c. reduction in corporate taxes for the period July 1-Dec. 31, 1971, following the release of information that unemployment had reached the highest level since 1961. *Oct. 17-26*, Premier Alexei Kosygin visited Canada, the first head of government of the Soviet Union to do so; discussions related to the ending of the arms race, working toward complete disarmament, co-operation in fields of trade, science and technology, and cultural activities, and co-operation in measures against Arctic pollution. *Oct. 21*, General Election in Ontario; Progressive Conservative government led by Premier Davis won a decisive victory; party standing, 78 Progressive Conservative, 20 Liberal, 19 New Democratic Party. Two bank accountants, Archibald MacLeod and William MacDonald of Summerside, P.E.I., sentenced to two years in penitentiary for theft of \$414,747 from the local Canadian Imperial Bank of Commerce after voluntarily returning from the United States with most of the money stolen and apologizing for the trouble they had caused. *Oct. 25*, The United Nations General Assembly approved the seating of the People's Republic of China and the expulsion of the representative of the Republic of China (Nationalist China). *Oct. 28*, General Election held in Newfoundland; Liberal Government under Premier Smallwood suffered heavy losses but the election results were indecisive; party standing, 20 Liberal, 21 Progressive Conservative and 1 New Labrador Party. The British House of Commons approved the entry of Britain into the European Common Market. *Oct. 29*, Violence marked a labour-organized protest march against a lockout and strike at the Montreal daily newspaper *La Presse*, with about 160 persons injured following the decision to suspend publication until the dispute, resulting in a lockout July 19 after six months of unsuccessful negotiations on a new labour contract, could be resolved. The Quebec English-language daily newspaper, the *Chronicle-Telegraph*, announced it would cease daily publication after 207 years and become a weekly.

**November:** *Nov. 1*, Toronto's newest daily newspaper, *The Sun*, staffed mainly by former employees of *The Telegram*, began publication. *Nov. 1-2*, Federal and provincial finance ministers met in Ottawa; discussions related to the Federal Government's new tax proposals, the machinery for redistributing wealth among the provinces and the future of health programs. *Nov. 2*, The Nobel Prize in chemistry for research in molecular spectroscopy awarded to Dr. Gerhard Herzberg of the National Research Council of Canada, the first Canadian achievement in the physical sciences to be so honoured. The Federal Government announced that its experimental hydrofoil ship for anti-submarine warfare, the *Bras d'Or*, developed at a cost of \$52,200,000, would be "mothballed" for at least five years because of cost and current circumstances. *Nov. 2-7*, First state visit to Canada of the President of Yugoslavia Josip Broz Tito and Mrs. Tito; agreements reached re updating trade relations, closer contacts and exchanges in science and technology, and the encouragement of travel between the two countries. *Nov. 4*, The Canadian Transport Commission outlined proposals for integrating, by late 1972, the transcontinental passenger-train services of the two major railways. *Nov. 8*, Arrival in the National Library of the first 20,000 of a shipment of 30,000 frames of microfilm, part of a collection of ancient Jewish and Hebraic manuscripts, the originals of which have been stored in Russia since the 1917 communist revolution. Federal Minister of the Environment Davis, in speaking to a UN conference, urged that Canada and other nations with ocean coastlines

take unilateral action to protect their environments from pollution since no international law or regulation exists to which a state may appeal for protection or reparation in cases of pollution damages to its coasts; and recommended that Canada's zone of unilaterally declared pollution control be 100 miles out into the Pacific and 400 miles from the Newfoundland coast to the limits of the Canadian continental shelf. *Nov. 9*, The Canadian Pacific Railway Company announced the withdrawal of the *Empress of Canada* from transatlantic and cruise service, ending decades of such service by the company. *Nov. 10*, The Canadian Broadcasting Corporation and *The Financial Post* jointly received the first Michener Award for Journalism for their presentation of a television program and a printed report on the air charter business. Report of the Senate Committee on Poverty released; recommendations included a guaranteed annual income at a basic \$3,500 for a family of four, to be provided for Canadian citizens but not for single persons under age 40. *Nov. 12*, Excerpts from the report of a committee headed by Minister of National Revenue Gray into foreign investment in Canada, never officially released, were published in *The Canadian Forum*. *Nov. 14*, Death in Rose-town, Sask., of Hon. W. M. Aseltine, former Leader of the Senate and member of the Privy Council. *Nov. 15*, Mrs. Grace MacInnis, M.P., for Vancouver-Kingsway, named Woman of the Year by the B'nai B'rith Women's Council of Toronto. *Nov. 15-17*, Economic conference of provincial premiers with Prime Minister Trudeau convened in Ottawa; no major decisions reported but agreement reached on closer co-operation in developing future winter works programs and student projects. *Nov. 17*, Death in Cobourg, Ont., of Senator Arthur W. Roebuck, after a distinguished career as lawyer, labour conciliator, journalist and politician. *Nov. 22*, Twelve prisoners accused in the beating deaths of two other Kingston penitentiary inmates during the April 1971 riot convicted of manslaughter and sentenced to additional terms ranging from two to 15 years. *Nov. 24*, Norman McLaren of the National Film Board of Canada awarded the Outstanding Achievement Award of the Public Service of Canada for 1971. *Nov. 27*, The Grey Cup, symbol of Canadian professional football supremacy, won by the Calgary Stampeders over the Toronto Argonauts in Vancouver, by a score of 14 to 11. *Nov. 30*, Paul Rose, serving a life sentence for the murder of Quebec Labour Minister Pierre Laporte in October 1970, sentenced to a concurrent life term for the kidnapping of Mr. Laporte.

**December:** *Dec. 2*, The Federal Government announced the signing of fishing and sealing agreements between Canada and Norway, terminating the latter's right to fish within Canada's 12-mile limit except for the Gulf of St. Lawrence where seasons will be limited, and permitting Norway to take seals as close as three miles but splitting the

seal harvest in the area between the two countries. Churchill Forest Industries Ltd., The Pas, an integrated forestry operation begun in 1966 by Swiss, American and German interests and backed by the Manitoba Development Fund, declared bankrupt; the Manitoba Government had assumed control on Jan. 8 on grounds that the company defaulted in financing arrangements and a judicial inquiry was begun July 7. *Dec. 3*, A Canada-U.S. extradition treaty signed in Washington, D.C.; the loophole under which Hal Banks was able to escape facing charges in Canada was closed with the addition of conspiracy to commit assault to the list of extraditable offences, and unlawful seizure of aircraft (hijacking) was also added. *Dec. 6*, Prime Minister Trudeau in conference with U.S. President Nixon regarding international affairs and economic issues; no specific conclusions reported. *Dec. 9-10*, An underground fire caused by collision of two trains in the Montreal subway system destroyed 36 subway cars and resulted in the death of the motorman of the train. *Dec. 11*, Death in Vancouver of Frank Ross, former Lieutenant-Governor of British Columbia. Death in Streetsville, Ont., of Mrs. Kate Aitken, for 25 years one of Canada's best known radio-voices, writer, and director of the CNE women's activities and educational work. *Dec. 18*, The Group of Ten, composed of major non-Communist trading countries, met in Washington, D.C.; a monetary agreement reached, highlights of which were the immediate lifting of the 10-p.c. import surcharge imposed in August by the United States, devaluation of the U.S. dollar through an increase in the price of gold, and continuation of the floating of the Canadian dollar. More than \$1,000,000 stolen from the main branch of the Royal Bank of Canada in Windsor, Ont.; six persons arrested a few days later and some of the money recovered. *Dec. 21*, Kurt Waldheim of Austria nominated to be the fourth Secretary-General of the United Nations, succeeding U Thant. *Dec. 23*, Royal Assent given to legislation concerning a completely revised federal income tax system, following the Carter Royal Commission on Taxation (established in 1962) Report of 1966 and the subsequent government White Paper, introduced in the House of Commons by Finance Minister Benson. *Dec. 25*, A son, Justin Pierre, was born to Prime Minister and Mrs. Trudeau in Ottawa. *Dec. 26*, Yves Geoffroy, a convicted murderer who had been granted a three-day pass from St. Vincent de Paul penitentiary to marry, failed to return. *Dec. 31*, The Canada Council announced the award of the 1971 \$15,000 Molson prizes for cultural achievement to Maureen Forrester, concert singer; Rina Lasnier, Quebec poet; and Norman McLaren, filmmaker. In a poll of Canadian women newspaper and broadcast editors, Margaret Trudeau, who married the Prime Minister in March, was voted most newsworthy; Grace MacInnis, M.P., most newsworthy in public affairs; Betsy Clifford, in sports; and Anne Murray, in entertainment.

## APPENDIX I

### CONSTITUTION AND GOVERNMENT

Certain information given in Chapter II on Constitution and Government (most of which is dated June 30, 1971) is updated in this Appendix to May 1, 1972. Appointments during that period to the Queen's Privy Council for Canada, the Cabinet and the Senate are included in the Register of Official Appointments, pp. 1345-1353.

#### PAGE 88

A number of changes were made in the Federal Cabinet between Oct. 20, 1971 (the date of the listing on p. 88) to May 1, 1972; its composition on the latter date was as follows:—

<u>Office</u>	<u>Name</u>
Prime Minister.....	Rt. Hon. PIERRE ELLIOTT TRUDEAU
Leader of the Government in the Senate.....	Hon. PAUL JOSEPH JAMES MARTIN
Secretary of State for External Affairs.....	Hon. MITCHELL WILLIAM SHARP
Minister of Veterans Affairs.....	Hon. ARTHUR LAING
President of the Queen's Privy Council for Canada.....	Hon. ALLAN JOSEPH MACEachen
President of the Treasury Board.....	Hon. CHARLES MILLS DRURY
Minister of National Defence.....	Hon. EDGAR JOHN BENSON
Minister of Industry, Trade and Commerce.....	Hon. JEAN-LUC PEPIN
Minister of Regional Economic Expansion.....	Hon. JEAN MARCHAND
Postmaster General.....	Hon. JOSEPH JULIEN JEAN-PIERRE CÔTÉ
Minister of Finance.....	Hon. JOHN NAPIER TURNER
Minister of Indian Affairs and Northern Development.....	Hon. JOSEPH-JACQUES-JEAN CHRÉTIEN
Minister of Manpower and Immigration.....	Hon. BRYCE STUART MACKASEY
Minister of Energy, Mines and Resources.....	Hon. DONALD STOVEL MACDONALD
Minister of National Health and Welfare.....	Hon. JOHN CARR MUNRO
Secretary of State of Canada.....	Hon. GÉRARD PELLETIER
Minister of the Environment and Minister of Fisheries.....	Hon. JACK DAVIS
Minister of Agriculture.....	Hon. HORACE ANDREW OLSON
Minister of Public Works.....	Hon. JEAN-EUDES DUBÉ
Minister of State for Urban Affairs.....	Hon. STANLEY RONALD BASFORD
Minister of Transport.....	Hon. DONALD CAMPBELL JAMIESON
Minister of Consumer and Corporate Affairs.....	Hon. ROBERT KNIGHT ANDRAS
Minister of Supply and Services.....	Hon. JAMES ARMSTRONG RICHARDSON
Minister of Justice.....	Hon. OTTO EMIL LANG
Minister of National Revenue.....	Hon. HERBERT ESER GRAY
Minister of Communications.....	Hon. ROBERT DOUGLAS GEORGE STANBURY
Solicitor General of Canada.....	Hon. JEAN-PIERRE GOYER
Minister of State for Science and Technology.....	Hon. ALASTAIR WILLIAM GILLESPIE
Minister of Labour.....	Hon. MARTIN PATRICK O'CONNELL
Minister of State.....	Hon. PATRICK MORGAN MAHONEY

#### PAGES 96 AND 97

During the period June 30, 1971 to May 1, 1972, the following Senators retired, resigned or died:—

Thérèse F. CASGRAIN (retired).....	Montreal, Que.
Hédard J. ROBICHAUD (resigned).....	Caraquet, N.B.
Earl Wallace URQUHART (died).....	West Bay, N.S.
Arthur Wentworth ROEBUCK (died).....	Toronto, Ont.
Harry A. WILLIS (died).....	Toronto, Ont.

#### PAGE 100

F. MOORES, member of Parliament for Bonavista-Trinity-Conception, Nfld., resigned Sept. 27, 1971. By-election to be held Oct. 16, 1972.

**PAGE 104**

P. G. GIVENS, member of Parliament for York West, Ont., resigned Oct. 6, 1971. By-election to be held Oct. 16, 1972.

**PAGE 105**

In a federal by-election held Nov. 8, 1971 in the electoral district of Assiniboia, Sask., Bill KNIGHT (NDP) was elected to replace A. B. DOUGLAS (Lib.), who died Mar. 6, 1971.

**PAGE 113**

The General Election held in Newfoundland on Oct. 28, 1971 did not give a clear majority to either political party. As a consequence, a second General Election was held on Mar. 24, 1972, which resulted in a return of 33 Progressive Conservatives and 9 Liberals. Following is the Second Ministry of Newfoundland as at May 1, 1972:—

<u>Office</u>	<u>Name</u>
Premier.....	Hon. FRANK D. MOORES
Minister of Justice and President of the Council.....	Hon. T. ALEX HICKMAN
Minister of Finance and Minister of Economic Development.....	Hon. JOHN C. CROSBIE
Minister of Mines, Agriculture and Resources.....	Hon. C. WILLIAM DOODY
Minister of Provincial Affairs and Minister of Labrador Affairs.....	Hon. A. J. MURPHY
Minister of Municipal Affairs and Housing.....	Hon. HAROLD A. COLLINS
Minister of Social Services and Rehabilitation.....	Hon. THOMAS HICKEY
Minister of Intergovernmental Affairs.....	Hon. GERALD OTTENHEIMER
Minister of Health.....	Hon. AUGUSTUS T. ROWE
Minister of Supply and Services.....	Hon. GORDON W. DAWE
Minister of Labour.....	Hon. EDWARD MAYNARD
Minister of Community and Social Development.....	Hon. AUBREY J. SENIOR
Minister of Education and Youth.....	Hon. JOHN A. CARTER
Minister of Highways and Minister of Public Works.....	Hon. T. C. FARRELL
Minister of Fisheries.....	Hon. ROY CHEESEMAN
Minister without Portfolio.....	Hon. WILLIAM W. MARSHALL

**PAGE 119**

A General Election was held in Ontario on Oct. 21, 1971, which resulted in a return of 78 Progressive Conservatives, 20 Liberals and 19 New Democratic Party. Following is the Eighteenth Ministry of Ontario as at May 1, 1972:—

<u>Office</u>	<u>Name</u>
Prime Minister and President of the Council.....	Hon. WILLIAM G. DAVIS
Provincial Secretary for Justice.....	Hon. ALLAN F. LAWRENCE
Treasurer of Ontario, Minister of Economics and Intergovernmental Affairs.....	Hon. DARCY McKEOUGH
Provincial Secretary for Social Development.....	Hon. ROBERT WELCH
Provincial Secretary for Resources Development.....	Hon. BERT LAWRENCE
Solicitor General.....	Hon. JOHN YAREMKO
Minister of Revenue.....	Hon. ALLAN GROSSMAN
Minister of Agriculture and Food.....	Hon. WILLIAM A. STEWART
Chairman, Management Board of Cabinet.....	Hon. CHARLES MACNAUGHTON
Minister of the Environment.....	Hon. JAMES A. C. AULD
Minister of Community and Social Services.....	Hon. RENE BRUNELLE
Attorney General.....	Hon. DALTON A. BALES
Minister of Education.....	Hon. THOMAS L. WELLS
Minister of Labour.....	Hon. FERN GUINDON
Minister of Industry and Tourism.....	Hon. JOHN WHITE
Minister of Colleges and Universities.....	Hon. GEORGE A. KERR
Minister of Correctional Services.....	Hon. C. J. S. APPS
Minister of Transportation and Communications.....	Hon. GORDON CARTON
Minister of Natural Resources.....	Hon. LEO BERNIER
Minister of Consumer and Commercial Relations.....	Hon. ERIC WINKLER
Minister of Government Services.....	Hon. JAMES W. SNOW
Minister of Health.....	Hon. RICHARD T. POTTER

## APPENDIX II

### POPULATION

As indicated on p. 204, advance information that has become available from the 1971 Census by mid-May 1972 is summarized in this Appendix. Tables showing population totals, sex and age distribution and official language spoken as mother tongue, by province, as well as the populations of electoral districts and of cities, towns and villages of 1,000 or more persons, as at June 1, 1971, are presented here without textual comment. Figures for certain preceding censuses are given for comparison. Census reports, available from Statistics Canada, contain detailed results of the 1971 Census and summary statistics for earlier censuses may be found in the 1970-71 and preceding editions of the Canada Year Book.

**1.—Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Census Years 1961, 1966 and 1971**

Province or Territory	Numerical Distribution			Percentage Change	
	1961	1966	1971	1961-66	1966-71
Newfoundland.....	457,853	493,396	522,104	7.8	5.8
Prince Edward Island.....	104,629	108,535	111,641	3.7	2.9
Nova Scotia.....	737,007	756,039	788,960	2.6	4.4
New Brunswick.....	597,936	616,788	634,557	3.2	2.9
Quebec.....	6,259,211	5,780,845	6,027,764	9.9	4.3
Ontario.....	6,236,092	6,960,870	7,703,106	11.6	10.7
Manitoba.....	921,686	963,066	988,247	4.5	2.6
Saskatchewan.....	925,181	955,344	926,242	3.3	-3.0
Alberta.....	1,331,944	1,463,203	1,627,874	9.9	11.3
British Columbia.....	1,629,082	1,873,674	2,184,621	15.0	16.6
Yukon Territory.....	14,628	14,382	18,388	-1.7	27.9
Northwest Territories.....	22,998	28,738	34,807	25.0	21.1
<b>Canada.....</b>	<b>18,238,247</b>	<b>20,014,880</b>	<b>21,568,311</b>	<b>9.7</b>	<b>7.8</b>

**2.—Sex Distribution of the Population, by Province, Census Years 1966 and 1971**

## APPENDIX III

### VITAL STATISTICS

PAGES 241-246

The following are 1970 figures for Tables 1 and 2 of the Chapter on Vital Statistics:—

#### 1.—Principal Vital Statistics, by Province, 1970

Province or Territory	Live Births		Deaths		Natural Increase <sup>1</sup>		Infant Mortality <sup>2</sup>		Maternal Mortality		Marriages	
	No.	Rate <sup>3</sup>	No.	Rate <sup>3</sup>	No.	Rate <sup>3</sup>	No.	Rate <sup>4</sup>	No.	Rate <sup>5</sup>	No.	Rate <sup>3</sup>
Newfoundland.....	12,539	24.2	3,294	6.4	9,245	17.8	273	21.8	5	3.9	4,466	8.6
P.E. Island.....	1,957	17.8	1,015	9.2	942	8.6	43	22.0	—	—	913	8.3
Nova Scotia.....	14,159	18.5	6,723	8.8	7,436	9.7	245	17.3	2	1.4	6,800	8.9
New Brunswick.....	11,545	18.5	4,945	7.9	6,600	10.6	227	19.7	2	1.7	5,696	9.1
Quebec.....	91,757	15.3	40,392	6.7	51,365	8.6	1,888	20.6	22	2.4	49,606	8.2
Ontario.....	134,724	17.6	56,769	7.4	77,955	10.2	2,271	16.9	27	2.0	68,874	9.0
Manitoba.....	18,248	18.6	7,856	8.0	10,392	10.6	344	18.9	4	2.2	9,008	9.2
Saskatchewan.....	16,443	17.5	7,472	7.9	8,971	9.6	368	22.4	3	1.8	7,317	7.8
Alberta.....	31,967	20.0	10,112	6.3	21,855	13.7	612	19.1	4	1.3	15,285	9.6
British Columbia.....	36,861	17.2	17,020	8.0	19,841	9.3	623	16.9	5	1.4	20,026	9.4
Yukon Territory.....	451	28.2	109	6.8	342	21.4	16	35.5	—	—	201	12.6
Northwest Territories.....	1,337	40.5	254	7.7	1,083	32.8	91	68.1	1	7.5	236	7.2
<b>Canada.....</b>	<b>371,988</b>	<b>17.4</b>	<b>155,961</b>	<b>7.3</b>	<b>216,027</b>	<b>10.1</b>	<b>7,001</b>	<b>18.8</b>	<b>75</b>	<b>2.0</b>	<b>188,428</b>	<b>8.8</b>

<sup>1</sup> Excess of births over deaths.      <sup>2</sup> Deaths under one year of age.      <sup>3</sup> Per 1,000 population.      <sup>4</sup> Per 1,000 live births.      <sup>5</sup> Per 10,000 live births.

#### 2.—Principal Vital Statistics for Incorporated Urban Centres of 20,000 Population or Over,<sup>1</sup> 1970

NOTE.—Figures for certain urban places may not be comparable for the periods shown because of changes in area boundaries, particularly for those indicated by an asterisk(\*). Urban centres are designated in this table by the following abbreviations: c. = city, t. = town, b. = borough, d.m. = district municipality, s.m. = suburban municipality and twp. = township.

Province and Urban Centre	Live Births	Deaths	Infant Mortality <sup>2</sup>		Neonatal Mortality <sup>3</sup>		Marriages <sup>4</sup>
